SEO relies on keywords and content relevance so in theory, you can only optimize the content for a single keyphrase. Multi-page sites have a bit more of an advantage in this area because they have more opportunities to rank for more keywords with each page targeting a specific keyphrase.</p>

Meta Title: Google Site Search: How to Search Any Website Using Google

Meta Description: Learn some tips and tricks you can use to search any website with Google Site Search. Read further in this comprehensive guide to learn more!

Google Site Search: How to Search Websites on Google

[Image from Canva](#)

When you want to search for a particular thing online, what is the first thing that comes to mind? We are sure you will first think of Google Search. It's no news that the world "Let me google it" is common among people around the world.

With Google site search, you can search for anything on the internet.

However, not everyone is a pro when it comes to Google search. But, that's ok. No one knows all things. We all learn one or a few new things every day. Using conceived keywords in Google search can still be too broad to give you the exact information that you are looking for. Because of that, you might need to be more specific when searching for information. The best way is to try and use the Google site search.

Google site search is a kind of search that allows you to search the entirety of a single website, instead of the whole World Wide Web.

If the information you are looking for is on a single [domain](#), you can quickly search to get what you are looking for.

If you are still confused about how to use a Google site search, you have nothing to worry about.

In this article, we will give a complete guide on how to conduct a Google site search. Let's get started!

How to Performing a Google Site Search?

The first thing you need to do when you want to search websites with Google is to navigate to www.google.com. Once you are on the Google site, enter the URL of the site you want to visit in the Google search box. Hit the enter button and boom, you will have lots of results at your fingertip. However, these results are usually too broad that you need a way to refine the results. The search engine has returned so much data and you need to spend your time trying to sort the result to get your desired information.

The best way to mitigate this is to search a specific website. This will reduce the several results that the search engine returns, thereby reducing the time you need to spend scrolling and reviewing the results. When you want to search for a specific website, you need to restrict the URLs that will be included in the search. Let's give an example for better understanding.

Let's assume we are searching for "free website templates" that are only available on the Strikingly website. Then we'd search for `site:www.strikingly.com' free website templates"`.

The screenshot shows a Google search interface. The search bar contains the text "site:www.strikingly.com free website templates". Below the search bar, there are navigation links for "All", "Images", "Videos", "Books", "News", and "More", along with "Settings" and "Tools". The search results are displayed below, showing about 988 results in 0.51 seconds. The first result is "Free Website Templates - Website Design Templates ..." from www.strikingly.com, with a description: "Get inspired by website templates, profiles, and businesses that thousands have launched on Strikingly. Choose a template for your website. All templates are ...". The second result is "5 Beautiful Free Website Templates and When to Use Them ..." from www.strikingly.com, dated 23 Dec 2020, with a description: "These are simple rules of thumb when it comes to web design, but the fact remains that you need to start with knowing what you need to present ...". The third result is "Free Website Templates - HTML5 Website Templates - Strikingly" from www.strikingly.com, with a description: "Free Website Templates. HTML5 Website Templates. Stunning website templates for your business website, online portfolio or store. Get Started. It's free!". The fourth result is "4 High Quality Free Personal Website Templates - Building ..." from www.strikingly.com, dated 17 Aug 2020, with a description: "Building a website is simple enough with free website templates and intuitive website editors. But creating your own portfolio website and ...". The fifth result is "Characteristics of the Best Website Templates - Building Your ..." from www.strikingly.com, dated 19 Oct 2020, with a description: "Sign up & build an amazing website in minutes! →. Related. 5 Beautiful Free Website Templates and When to Use Them."

[Image from Google Search](#)

The site:www.strikingly.com is what made this possible. Instead of searching through the whole World Web, google will only search the domain that you specify after the “Site:” operator.

Make sure that you input the URL correctly, including the letters that precede the main domain name. This could include www, [blog](#), or info.

In this search, we asked Google to search for all the subdomains that are available on the Strikingly domain. Let assume Strikingly has a blog [domain](#) that is written as blog.strikingly.com. If you want to narrow your search and focus on the blog subdomain. Here is an example of how you can enter the search term:

Site:blog.strikingly.com

If this subdomain exists, it will return results only from the blog section of the site.

Benefits of Google Site Search

[Image from Canva](#)

There are several ways where Google site search can be incredibly useful. Here are some of the reasons why you should consider trying Google Site Search.

1. Google site search helps to [improve SEO](#). You need to understand how well a [website](#) is indexed compared to how many pages are on the site. When you search the site via Google, you can be sure of the number of pages that Google index. Then you should compare these numbers to the result you got from a crawling program such as the Parallel Web Crawler to know if there is a major difference in the site indexing.
2. When you are looking for a particular piece of information, content, paper, or statistics, using Google site search is a great way to get the necessary data from a single website.
3. When you are writing a paper on something, or you want to search for topics, you can use Google site search to scan for the topic you have in mind across relevant sites.
4. If you also want to get an edge over your competitors, you can use Google site search to know what they are writing about.

How to Improve Your Google Search?

Most people have conducted millions and millions of searches, but this does not mean they are doing it the right way.

It's possible that you have not perfected your Google searching skill. While it is true that Google site search is a great way to gather information, there are many other ways to get exactly what you want from Google search sites. This can be done through advanced Google search.

Advanced Google Search Tips

If you have not gotten the exact result you want from Google search, here are some ways you can use to [improve your Google search](#).

1. Use the Google Tabs

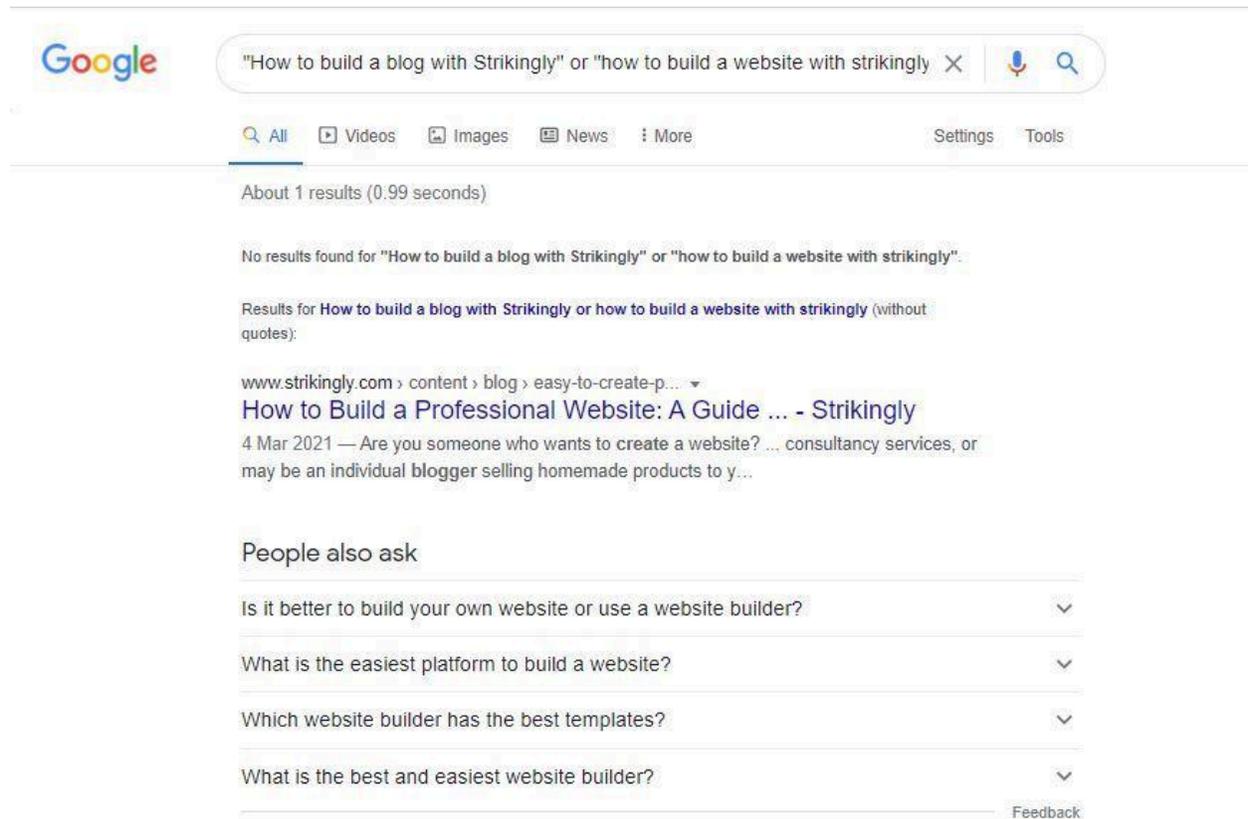

If you look at the top of the Google search page, you will see several tabs that are labelled All, News, Images, Maps, Videos, and More. You can use these tabs to tell Google the type of content that you are looking for.

[Image from Google](#)

2. Search Using Multiple Keywords

Another way to improve your Google search is by using multiple keywords. If it's one phrase, you can put them in quotes so that the search engine will return results for both phrases. However, if it is just a single word, there is no need for a quote.

[Image from Google](#)

3. Make use of Quote

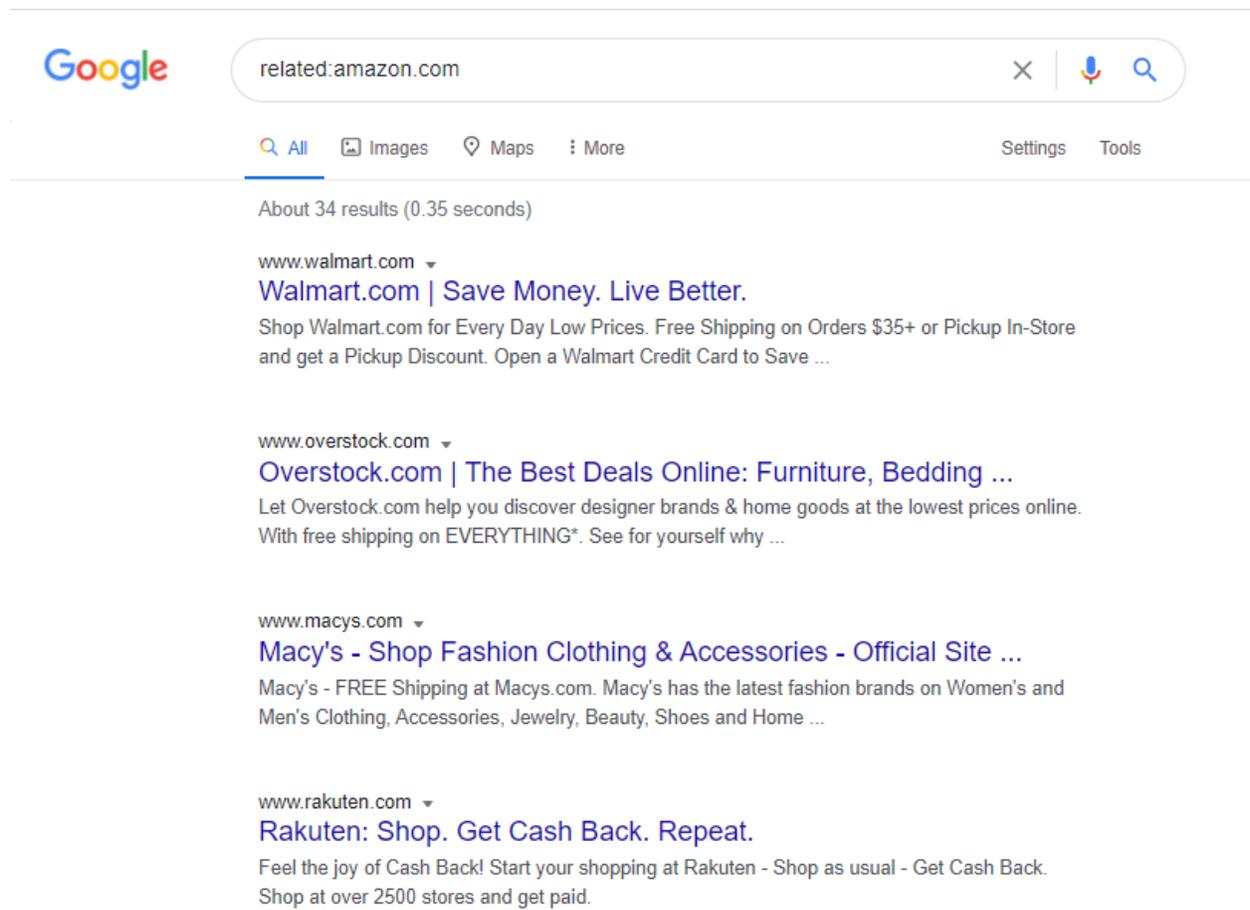

If you are trying to search a particular paper or topic, you can enclose it in a quote to make it more specific.

Anything you include within a quote is telling Google that you want an exact match on the word.

4. Find Related Sites

If you want to search a site that is similar to the one you already know, just include related: before the word. For example, if you are looking for a site similar to Amazon.com.

Just type related:amazon.com in the Google search tab. Take a look at the image below to see how it's done.

[Image from Google](#)

5. Use the Asterisk as a Wildcard

This is one of the great tips that you can use to improve your Google search. If you want to know how it works, here is how!

When you use an asterisk in your search queries, it's telling Google that the word within the asterisk can be replaced by any relevant word. For instance, if you are searching for a song title but you are not certain about the exact name. You can enter *Judge Me* as your search query, you will get one of Chris Brown songs titled Don't Judge Me.

6. Use the Define Command

If you are searching for the definition of a particular word, you can get it faster by including Define:. When you use the define command, you are telling Google that you want the description of that word.

7. Find certain files

People often forget that Google can search for certain files. This tip is useful when you are searching for a specific Powerpoint or PDF file that you have previously checked or maybe you need it for another project. The term to use to conduct a search is pretty straightforward.

Just type the filename followed by the PDF word. You will write it this way:

Search term filename:pdf.

The word you are looking for will replace the *search term*. For example, if you are searching for the benefits of a website. You will enter it this way:

Benefits of a website filetype:pdf. You can also search for file types like doc, XML, and more.

8. Spellings doesn't matter

Google search is smarter than it used to be. Today, spellings don't matter when you are trying to find information online. As long as it's close to the actual word, Google will figure out what it means.

If you search for "W nvr gong to gv up", Google will assume that you wanted to search or "We never going to give up"

How to Increase Search Engine Ranking with Strikingly?

If you want your website or businesses to be visible to people who are searching for something related to what you do, it's important that you improve your search engine ranking. One of the ways you can use to increase search engine ranking is by adding a custom domain to your Strikingly website. To do that, follow the steps below:

If you are in your Strikingly site editor

1. Go to your site editor, click SETTINGS > Domains.
2. Click "REGISTER NEW DOMAIN".

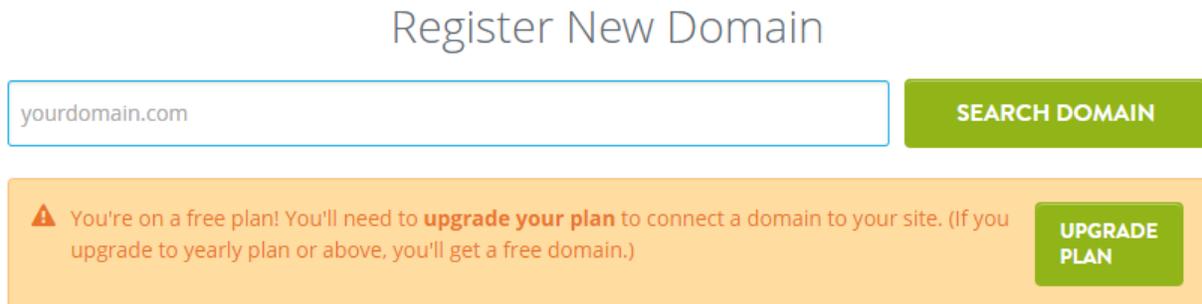

The screenshot shows the 'SETTINGS' menu on the left with 'Domains' selected. The main content area is titled 'DOMAIN' and contains three sections:

- Register A New Domain**: Includes the text "Don't own a domain yet? Grab one here." and a prominent blue button labeled "REGISTER NEW DOMAIN" with a red arrow pointing to it.
- Custom Domain/Subdomain**: Marked as "PRO / LIMITED". Includes the text "If you already own a domain, enter it here. Empty it to disconnect." and a form with the placeholder "e.g. www.mydomain.com" and an "UPDATE" button.
- MyStrikingly.com URL**: Includes the text "Enter a unique MyStrikingly.com URL. You may change this at any time." and a form with the placeholder "https:// strikinglysite .mystrikingly.com" and an "UPDATE" button.

[Image from Strikingly](#)

If you are on your dashboard

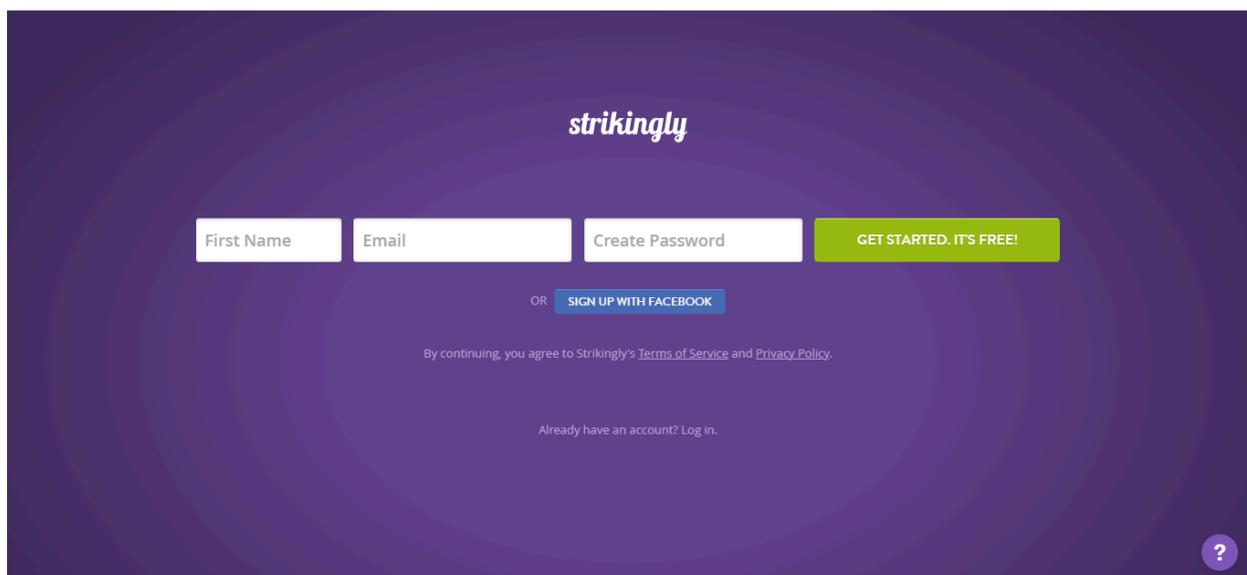

1. Go to [your Strikingly Dashboard](#).
2. Go to "Domains" and click "REGISTER NEW DOMAIN"

[Image from Strikingly](#)

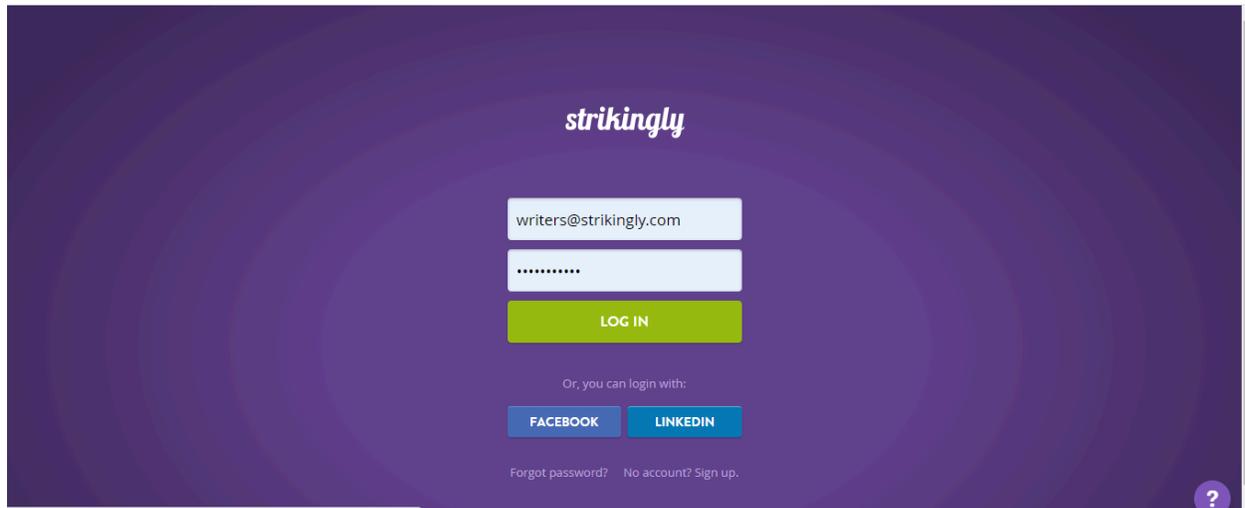

If you want to learn more on how you can add a domain to your Strikingly website, you can click [here](#). Alternatively, you can use [Strikingly free URL](#), and the URL has good [SEO](#) and loads quickly as well. Additionally, if you don't have a website yet, you can design a free website with Strikingly. There are tons of stunning templates that you can choose from.

1. First, create an account with Strikingly

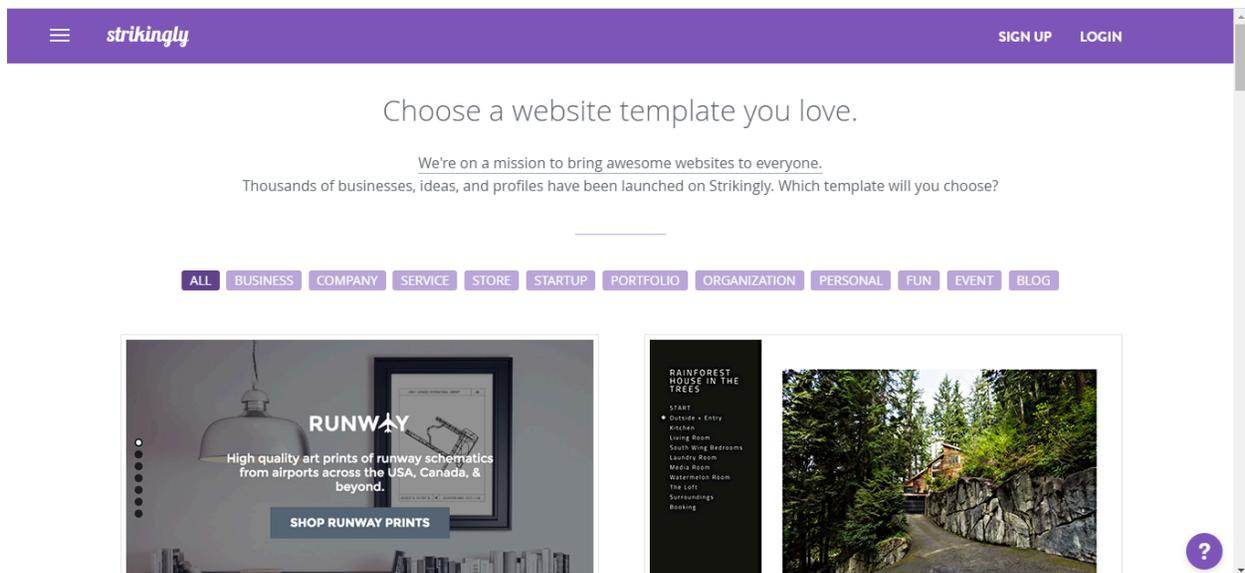

[Image from Strikingly](#)

2. Once you are done signing up, the site will log you in automatically.

[Image from Strikingly](#)

3. You will come across tons of website templates that you can choose from.

[Image from Strikingly](#)

4. After choosing your desired template, you can start editing it to fit your business or personal preference.

The Strikingly editor feature is easy and straightforward to use. You don't need to be a pro before you can use it. If you don't know how to use the Strikingly site editor, read this [step-by-step guide](#) to get started.

Ready to design your personal or business website? [Create an account with Strikingly](#) today!
