

This is my Date table. I am using Month_Year_Date field (this data format is in date) for populating the Month & Year

This is my measure to calculate the Previous Month Comparison,

```
SAAS_OPS_Inflow_MOM =  
CALCULATE([SAAS_OPS_Overall_Inflow],  
DATEADD('Date'[Date], -1, MONTH), YEAR('Date'[Date]) = YEAR(TODAY()))
```

Which is shared by you.

When I do this am getting previous month values as 20. Also my data has Dec'23 data and I don't want that when I do month on month comparison. I want only for 2024 Months.

Desired/Expected output:

	Current Month	Previous Month	
Jan'24	100		
Feb'24	110	100	
Mar'24	99	110	

Current Output: Which is not correct

Month_Year_Date	SAAS_OPS_Overall_Inflow	SAAS_OPS_Inflow_MOM
January 2024	13469	20
February 2024	13334	20
March 2024	13123	20
Total	39886	26783
