Abstract

The abstract is written in a single paragraph without subheadings, consisting of 150 to 200 words. It must be written in English using an academic, objective, and clear style to comprehensively reflect the substance of the research. The abstract should be formatted in **Times New Roman, size 10 pt, with single spacing (1.0)**. References or citations are not allowed. The abstract should end with a list of **three to five keywords** that are relevant to the content of the research and easily indexed.

The content structure of the abstract includes several main components, namely background, objective, method, findings and implications, and conclusion.

Background: provides a brief overview of the issue or problem underlying the research and its relevance to the field of study.

Objective: is briefly stated to indicate the direction and focus of the research conducted.

Method: describes the approach, design, and techniques of data collection and analysis used in the study.

Findings and Implications: present the main results of the research along with their impact or contribution to the development of knowledge, practice, or policy.

Conclusion: contains the final statement that answers the research objective and, if necessary, provides recommendations or directions for future research.

INTRODUCTION

Describe the science and technology/goods/services offered to solve partner problems and work procedures to support the realization of the solutions offered. Describe the activity that shows steps to solve the problem and describe how the partners participated in the implementation of the activity.

Describe the type of output produced in accordance with the plan in terms of production, management, or other outputs in the form of products/goods, services and other outputs.

The template for this article format was created in MS Word 2010, Body text using the font: Times New Roman 12, regular, spaced 1. The introductory section is about 2-3 pages long. The writing of this introductory section is without subtitles.

METHOD

Basically this section describes the implementation and service methods. The description of the implementation of the activity includes the location, time, participant background, and

the number of participants. Meanwhile, the description of the activity method includes the methods and materials presented. Choose one or a combination of several activity methods, including: (1) training / training related to goods and services, diffusion of science and technology, substitution of science and technology (renewable science and technology), or simulation of science and technology; (2) Continuous education; (3) awareness / increased understanding of a problem; (4) consultation / mentoring / mediation. It is best to avoid organizing the writing into "sub-headings" in this section.

However, if it cannot be avoided, the method of writing can be seen in the "Results and Discussion" section.

RESULTS AND DISCUSSION

Results must be presented correctly and accompanied by an explanation without reference to the literature. Original and important findings must be stated. Results must be illustrated with numbers or tables if necessary, but must be kept to a minimum. Detailed discussion, speculation, and interpretation of data are not included in the results, but in the discussion section.

1. Tables

Tables are made with column width either 80 mm or 170 mm, in single spacing. Use only horizontal lines for borders. For example

Table 2. The Mean of LDL-cholesterol

Group	Mean±SD, mg/dl	
	Pre-test	Post-test
Control	50±6[a]	24.23±4[a]
Non-exercise	51±4[a]	97.99±4[b]
Exercise	54±6[a]	29.40±2[a]
p	0.013	< 0.001

[a,b] Significant ($p > 0.05$).

Source:

2. Graphs

Graphs created with Microsoft Excel should also be sent in their original Excel file. Present graphs in 2D (not 3D), without shadows or other effects, and without gridlines.

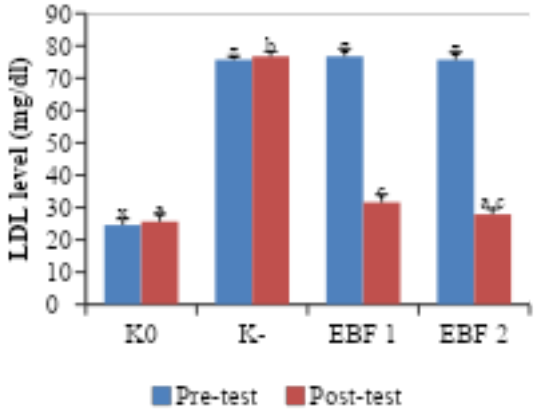

Figure 6. LDL level pre-test and post-test. Different notation shows significant differences ($p < 0.05$). K0: control; K-: negative; EBF1: extract 1; EBF 2: extract 2

Source:

3. Photos and figures

Relevant documentation with a focus on Bussines, economic and management. The minimum resolution of photos and images is 300 dpi with JPEG extensions (.jpg). Use image-processing software to check dpi.

(a) (b)

Figure 7. The appearance of Desa Bondowoso. (a) Majority of house type owned by the community. (b) Grass appearance of the community field.

The discussion must interpret the findings expressed in the results obtained with the background of existing knowledge (not repeat the result). The discussion must highlight what's new. Each assumption must be clearly stated. Linkages between results and the context of the target population and possible generalizations to other populations. The advantages and disadvantages of community empowerment activities that are carried out with the conditions of the surrounding community.

CONCLUSION

Provide conclusions on the level of achievement of targets for community empowerment activities. Providing conformity to methods of community empowerment with problems, needs, and challenges that exist in the area of community empowerment activities. Give conclusions about the impact and benefits of community empowerment activities. Provide advice for further community empowerment.

FUNDING

The author states that no financial support has been received for the implementation of this research and/or the publication of this article.

CONFLICT OF INTEREST

The author states that this research was conducted without any commercial or financial relationship that can be interpreted as a potential conflict of interest.

AUTHOR CONTRIBUTION

If relevant, statements regarding the contributions of each author may be included in this section.

GENERATIVE ARTIFICIAL INTELLIGENCE USAGE STATEMENT

The authors state that generative artificial intelligence (AI) was used in the preparation of this manuscript. The authors acknowledge the use of generative AI to help improve language clarity and improve the grammatical structure of manuscripts. The use is carried out in compliance with applicable ethical guidelines regarding the use and disclosure of generative AI in scientific research. Each author has made substantial intellectual contributions to this work. The entire content of the manuscript has been carefully reviewed to ensure its accuracy, and the author is solely responsible for the integrity and final content of the manuscript

REFERENCES

References are written based on APA 6th edition style. References are listed in numerical order, and in the same order as quoted in the text. The References only lists references that you have quoted in the text. The author is responsible for the accuracy and completeness of the references. Consistent with reference styles throughout the article. Highly recommend to use Mendeley.
