AEE offers a wide range of standard tungsten powder from sub-micron to 50 mesh. We are also able to have the particle size tailored to your requirements if what you are looking for is not listed. Fine grades of tungsten powder (WP 100-103) are used mainly for electrical contacts, military ordnance, pyrotechnics, mining tools, and medical devices. The intermediate grades (WP 104-109) are used as thermal spray powders and in mining tools. The coarse grade powder (WP 110 – 112) are primarily used as matrix powder, thermal spray powders, and in rubber composites. We can adjust all grades to target specific particle sizes, increased density, and any additional

requirements your application may have.
