

Checkpoint Bulk

We are now opening a new version of the bulk for **arisen rank kukuries**.

With this we will only bulk a new checkpoint from the old tracker and not any of the art. This checkpoint will tell from what day point the art is viable for the fp and the total fp amount.

For example:

If the checkpoint in the new tracker is January 1, 2025 **any art that is older than that can't give any more fp to that kukuri.**

This way bulking is an **optional** thing to do, but if done all the art before this needs to be confirmed. If you are planning to do this, be careful **to not post any new art for that kukuri** before this has been done so that you don't lose any fp for that kukuri.

The date mentioned in that checkpoint will be **non-negotiable** and that there is no way to remove that date after it has been done, unless the member makes a fully new tracker and selfbulks the art in 100-200 fp chunks.

After the new checkpoint you can continue posting the art normally into the new tracker.

Admins will bulk the checkpoint into places they belong.

From personal art to personal art etc.

Rules:

- Kukuri needs to have at least **Arisen I** to be able to do this.
- All the art needs to be confirmed before this can be done for the kukuri.
- All the art that has been posted before this checkpoint's date can no longer give fp for this kukuri.
- New tracker needs to be clear from any art, only comments where admins will post the checkpoints are allowed.
- This bulk can be done once every arisen rank for the kukuri and it can be done at any point of the arisen rank.
- Checkpoint date will be taken from the **post date of that prompt**. When posting for this bulk please wait **2-3 days before posting any new art of this kukuri**.
Timezones can make things a little bit hard and waiting for a couple days makes things less stressful for you and admins!

Example of the admin comment for checkpoint bulk:

What if I bought a kukuri that has this checkpoint bulk done? Or if i want to get this done before selling kukuri with a lot of fp?

Admins will add and move those checkpoints where they belong (*usually with kukuri changing owners those will be moved into 'art by others'*). Optionally you can have a comment just for these checkpoints. If you want to get those checkpoints removed you will need to self bulk that kukuri from the 0 in 100-200 fp chunks.

This can be done before selling kukuri. As long as the kukuri has Arisen I rank.

Why checkpoint bulk?

Kukuries with Arisen and bigger ranks have a lot of art in their trackers. With these checkpoints the already confirmed art and fp is safe if the tracker breaks.
