Recommendation for Safety & Security Project

The current security system no longer meets the needs of the district. Multiple events in the district have continued to affirm this situation and justified a review of the current system. This winter a district team reviewed the current system and potential solutions. It was decided in March to seek bids. After review of the four bids received, the recommendation is to award Bluum Technology (formerly Terany) the bid.

Bluum will provide the Verkada Security solution that includes video surveillance, door access, vape detection and cloud hosting/monitoring services. The bid includes a 5 year licensing agreement and 10 year equipment warranty for a total project cost of \$408,673.82.
