

# Privacy Policy

Last updated September 11 2026

Effective September 11 2026

This Privacy Policy explains how the Passport Photo mobile application processes information when you take, select, edit, enhance, check, save, or share a photo, and when you purchase Pro features. Passport Photo is designed to perform most photo processing on your device. A photo leaves your device only when you choose a feature that requires it, such as AI Smart Enhancement, or when you save or share it with a destination that you select.

## Information We Process

### Photos You Take or Select

Passport Photo processes photos that you take with the camera or select from your photo library. A photo may contain a face and may therefore be personal information or sensitive personal information under applicable law.

The app uses your photo to provide the features that you request, including cropping, resizing, background replacement, retouching, makeup effects, outfit overlays, image format conversion, compliance checks, print layout, saving, and sharing. Except for AI Smart Enhancement, these operations are performed on your device. We do not use your photos for advertising, user profiling, or purposes unrelated to the features that you request.

### Face Information

The app may detect a face and calculate face position, face bounds, and facial landmarks such as the approximate locations of the eyes, eyebrows, nose, mouth, face contour, and chin. It uses this information on your device to help frame a photo, assess common ID photo requirements, separate the person from the background, and apply edits to the intended facial area.

Passport Photo does not use face information to identify or authenticate a person, compare one person with another, determine a person's identity, or create a persistent facial recognition template. Face geometry used during editing is processed on the device and is not uploaded as a separate face template. Temporary face geometry is kept only as needed for the current editing operation and is released when it is no longer needed by that operation.

Source photos and edited photos remain on the device unless you choose AI Smart Enhancement, save them to Photos or Files, or share them through the iOS share sheet. Locally stored photos remain until you delete them, clear the app's data, or uninstall the app. Before uninstalling, export any result that you want to keep.

### AI Smart Enhancement

AI Smart Enhancement is optional and requires an internet connection. The app uploads a selected photo only after you choose this feature and confirm the upload. The upload may include:

- The selected photo, which may be resized so that its longest side does not exceed 1024 pixels
- Instructions intended to preserve the person's identity while improving lighting, clarity, and natural skin appearance
- The requested aspect ratio and technical request parameters
- App version, channel, membership status, request count, and a randomly generated device identifier used for request authorization, security, abuse prevention, and usage limits

The request is currently sent over HTTPS to the VisionGPT API at [api.visiongpt.cc](https://api.visiongpt.cc). The provider processes the photo to generate and return the enhanced result. Processing may occur outside your country or region. Do not upload a photo unless it is your photo or you have permission from every identifiable person in it.

We do not operate a server-side photo library for AI Smart Enhancement and do not intentionally keep a separate copy of an uploaded photo after the requested result has been returned. The processor may temporarily retain request data or limited security logs when necessary to complete the request, investigate failures, prevent abuse, or comply with law. Because the processor's maximum retention period is not stated in the app code or available public documentation, contact us through the developer contact shown on the App Store product page before uploading if you need a specific retention period or deletion confirmation.

We do not knowingly use uploaded photos or face information to train advertising systems or models unrelated to the feature requested by the user. You may decline AI Smart Enhancement and continue using the original photo and the app's on-device editing features.

## **Purchases and Membership**

Apple StoreKit processes subscriptions and one-time purchases. Apple handles your payment method. We do not receive your full payment card number. The app reads product information, transaction verification results, current entitlements, and expiration status to complete purchases, restore purchases, and unlock Pro features.

## **Device Permissions**

Passport Photo may request:

- Camera access to take a photo
- Photo library access to select a photo
- Add-only photo library access to save a finished photo

You can change these permissions at any time in iOS Settings. Disabling a permission affects only the features that depend on it.

## **Information Stored on Your Device**

The app may store photos and edited results, feature preferences, AI upload confirmation state, a random device identifier, request counts, and membership status on your device. This information

does not leave the device unless you use AI Smart Enhancement, save to a destination you choose, or use the iOS share sheet.

Passport Photo does not currently require an account and does not include third-party advertising or third-party behavioral analytics SDKs.

## How We Use Information

We process information only to:

- Provide the photo capture, import, editing, enhancement, compliance, saving, sharing, and print layout features that you select
- Complete purchases, verify membership, and restore purchases
- Authenticate network requests, enforce usage limits, prevent abuse, maintain service reliability, and investigate errors
- Meet applicable legal obligations

## When Information Is Shared

We do not sell or rent your photos or face information. Information may be disclosed only in these circumstances:

- When you confirm AI Smart Enhancement, the selected photo and necessary request parameters are sent to the VisionGPT API processor
- Apple processes purchases, subscriptions, refunds, and purchase restoration
- When you use the iOS share sheet, Photos, or Files, the result is provided to the app, service, or recipient that you select
- Information may be disclosed when required by applicable law or a valid request from a court or public authority

Third parties process information under their own terms and privacy practices. Review the privacy practices of any destination you choose before sharing a photo.

## Retention and Deletion

- Photos, projects, results, and preferences stored on your device remain until you delete them, clear the app's data, or uninstall the app
- Face geometry used for on-device editing is temporary and is not retained as a persistent facial recognition template
- AI Smart Enhancement transfers a photo only to perform the request. We do not maintain a server-side user photo library. Limited processor logs may be retained when necessary for security, troubleshooting, abuse prevention, or legal compliance as described above

- Apple retains transaction records according to its policies and applicable law

You can delete local work in the app where a delete option is available, remove exported files from Photos or Files, or uninstall the app. To request information about an AI request or ask for deletion of information associated with the online service, contact us through the developer contact shown on the App Store product page. We may need information that reasonably links the request to a device or transaction, but you should not send a full passport number, national ID number, payment card number, or an unredacted identity document.

## **Security**

We use reasonable technical measures intended to protect information. AI Smart Enhancement requests use HTTPS, uploaded image dimensions are limited, and service responses are validated. Most editing is performed on the device. No internet transmission or electronic storage system can be guaranteed to be completely secure. Avoid including passport numbers, national ID numbers, addresses, or other details that are not needed to create the photo.

## **Your Choices and Rights**

Depending on applicable law, you may have the right to access, correct, delete, or obtain a copy of personal information, object to or restrict certain processing, and withdraw consent. Withdrawal does not affect processing that occurred before withdrawal.

You can choose whether to grant camera or photo access, whether to use AI Smart Enhancement, and whether to save or share a result. Contact us through the developer contact shown on the App Store product page to make a privacy request.

## **Children**

Passport Photo is not directed specifically to children. A child should use the app only with the consent and supervision of a parent or legal guardian, especially before uploading a photo to AI Smart Enhancement. A parent or guardian who believes that a child submitted personal information without appropriate consent should contact us.

## **Changes to This Policy**

We may update this Privacy Policy when app features, data practices, or legal requirements change. We will provide notice of a material change through the app, an updated document, or another reasonable method. The updated policy applies from the effective date shown above.

## **Contact**

For privacy questions or requests, use the developer contact shown on the Passport Photo product page in the App Store or the Technical Support page linked in the app. Do not include a full passport number, national ID number, payment card number, or an unredacted identity document in your first message.
