Course comparison

The purpose of this document is to document our finding of similar courses and extract what we liked from them and what we did not like so we may learn from similar efforts. This should help us build the course content.

Some points to be considered in the course creation:

- Clear course objective and requirements
- How the course was introduced to the students
- Clear presentation of concepts
- Appropriate use of tools
- Content organization and planning
- Usefulness of related course material

List of courses

Please follow the following format when adding course entries

Ex. :

Lynda.com

Lynda.com
Description: Online course though through a series of video with related files.
Positives: Clear course overview in introduction and good explanation of how the learning tools will be used. Course is very complete and touches all aspects of 3D printing. Course is broken down in a clear curriculum, each section has a clear objective. Good explanation of what a 3D printer is. Good use of powerpoints and videos.
Negatives:

Voxel Factory

Voxel Factory Workshop
Voxel factory offers a two-day course on 3D printing bundled with the construction of a 3D printer
Positif: Summary of two day class (we could inspire ourselves from this) Facebook page so participants can stay in touch after course.
Negatives: Note: It's hard to tell the quality of the content as there is no videos of the presentation and I did not attend the class.
