Article	Abstract
<p>Keywords: All of Related, Keywords, with Your, Study</p> <p>Article History: Received: leave it empty; Reviewed: leave it empty; Accepted: leave it empty; Published: leave it empty;</p>	<p>The abstract must consist of four points: objectives, methods, results, and conclusions (Tahoma, 10pt, single line spacing, 1 paragraph, justify, maximum 250 words). In the objectives, clearly state the main objectives of the study, the issues being focused on, and the research questions you want to answer. Provide a brief context about the relevance of your research topic so that readers can easily understand why your research is important. In the methods section, briefly describe the methods you used in your research. This should be a concise summary of your approach, including any specific techniques or tools you used. Avoid going into too much detail; the main goal is to give readers a quick overview of the overall methodology used. In the results section, summarize the main findings of your research. Highlight the most important results that will help readers understand your conclusions. Focus on the findings most relevant to your research question. Then, in the Conclusion section, discuss the main conclusions of your research. What is your answer to the problem or question you posed at the beginning? Then, mention the important limitations of your research and provide recommendations if relevant. This section should give readers a clear understanding of the main points that have been proven or argued by your research.</p>

Introduction

The introduction should contain (in order) general background, a current review as the basis for the scientific originality statement of the article, the scientific originality statement, and the research problem or hypothesis. At the end of the introduction, the purpose of the article review must be stated. In the format of a

scientific article, it is not permitted to include a literature review as in a research report, but it is realized in the form of a current review to demonstrate the scientific originality of the article.

Whenever you want to cite from the references, please use **Mendeley citation manager**, using **APA (American Psychological Association) 6th Style**. For example, like (Yin, 2003) in the text. According to (Mason, 2002), or (Soratto et al., 2020).This is just an example of how to cite from the reference list.

Methods

The methods used in this study must be explained here, including the research approach, data collection methods, analytical methods, and any other relevant parts.

Results and Discussion

Results and discussion contain the results of your study. Write down the findings obtained from the results of the implementation that has been done and must be supported by adequate data.

Table 1: Example Table 1

No.	Header 1	Header 2
1	Content 1	1234
2	Content 2	5678

Tables, graphs and figures should be written in a script according to the systematic order of presentation. Tables (example Table 1) and figures (example Figure 1) should be numbered consecutively in accordance with their appearance in the text. Tables are captioned on top of the table body and place any table notes below the table body with proper indications to the contents in the table body (if needed, for example, the source of the table). Figures are captioned at the bottom of the figures.

Figure 1: Example Chart

Equations must be centered and numbered. You may copy the following equation (Eq.1) to replace it with your equation. For example, the value x can be calculated by multiplying the two independent variables a^2 and b divided by 2.

$$x = \frac{a^2 b}{2} \quad (1)$$

In order to create an equation, go to Insert Menu, then click underneath the Equation icon and select equation umam publisher. Once the equation template has been created, you can modify the formula. Make sure you remove the border of the equation table. Below another example (Eq.2).

$$x = \frac{a b}{5 b^3} \quad (2)$$

Conclusions

Explain conclusions and suggestions in this section. The conclusions illustrate the answer of the hypothesis and / or the purpose of the research or findings obtained. The conclusion does not contain a loop of results and discussion, but rather a summary of the findings as expected in the goal. Suggestion presents the things that will be done related to the next idea of the implementation of community service and engagement.

Acknowledgment (optional)

Insert acknowledgment, if any. This can be sponsor and financial support acknowledgments, or any other relevant statements.
