

Thank you for your review!

We have stabilized the Vision, Mission, Values to the point that we can continue forward aligned, however we will circle back to refine these in ~ October, so any comments here will be integrated to the [TE Commons Handbook](#) then.

Document Owner: Griff (please someone take it from me :-D)

TEC VISION

A safer world with digital socio-economic public infrastructures that are diversely designed and aligned with collective needs.

(Other iterations)

A safer world enriched by interconnected tokenized infrastructures designed to fit local needs while maintaining alignment with the collective interests of humanity.

A safer world enriched by diversely designed tokenized socio-economic infrastructures that are aligned with the local and collective needs & interests of humanity

TEC VALUES

The TEC operates from a prosocial human-centered perspective.

We hold ourselves to high standards of safety, resilience, and integrity.

We encourage our members to be radically open source, non-hierarchical, creative, transparent in their intentions and accountable for their actions.

We are value-driven (not profit-driven) and will strive to support token engineering projects that appreciate the value of public goods and ethical, inclusive economic systems.

TEC MISSION STATEMENT SHORT

The TE Commons mission is to gather and steward the efficient distribution of funds to projects in the emerging field of token engineering to encourage the robust and ethical design of tokenized infrastructures. The TE Commons will curate and connect projects to the resources they need, while also evolving and maintaining our own healthy culture & regenerative infrastructure where capital supports contributions, contributions create value, value empowers token engineers, and people who appreciate token engineers being empowered contribute capital of all sorts.

Note: It was decided that we would go with the short mission as our mission... but the long term mission is posted here as well as it has some value... we just aren't sure how we will use it yet.

TEC MISSION STATEMENT LONG

The Token Engineering Commons' Mission is to gather and steward the efficient distribution of funds to projects creating and documenting best practices in the emerging field of token engineering to encourage the robust and ethical design of tokenized infrastructure.

We will support ANY initiative that helps us achieve our vision, especially those that align with our values and are:

- Accelerating the emergence of robust and diverse, battle tested TE Design Standards.
- Adding to the open-source library of TE education, documentation, toolkits, playbooks & resources.
- Creating TE educational opportunities.
- Synthesizing research to ensure the safe operability & interoperability of tokenized infrastructures.
- Building regenerative open-source solutions for public goods that align people, profit & the planet.
- Connecting communities to resources and each other to support our mission
- Evolving and maintaining our own healthy culture & regenerative infrastructure where capital supports contributions, contributions create value, value empowers token engineers, and people who appreciate token engineers being empowered contribute capital of all sorts.

The curation of which initiatives to fund will be guided, first and foremost, by what we believe will best enable the responsible application of ethically engineered value systems that create a free, open, and equitable society.
