

Put the Title of Paper Here, in Capitalize Each Word without Line Separation

Author's name ^a*, author's name ^b, author's name ^b

^a author's affiliation, city, and country

^b author's affiliation, city, and country

* Correspondence email

Abstract. Write down the title in Gill Sans MT size 14 font. The author name is written in the same font type with 11 font size, followed by the author affiliation below the author name. The corresponding author is set as the footnote on the same page with the Gill Sans MT font in 11 size. The abstract reflects the content of the paper with about 200 words. It should state the background problem, purpose of the research, research methods, result, and conclusion. Citation should be avoided in the abstract. Use the Gill Sans MT font in 11 size for abstract.

Keywords: There are about 2-5 keywords; Separated by semicolon (;) between keyword

1. Introduction

The author should provide the background problems of the research based on literature review. The objectives of the research should be stated along with the originality of the work (state of the art). The cited articles should be written in order by year of publication, for example, (Creswell, 2022; Putro, 2021; Aitbayev, 2017). Citations are written in IEEE style by Mendeley application which are shown as [1,2,3]. Use the Gill Sans MT Font in 12 size. The paper length should be up to 13 pages or about 5000 words.

2. Methods

Explain detail methods effectively which show the originality from the author. The methods should be written clearly so that the work can be reproduced. If the methods have already published, author must write the reference and describe the modifications.

2.1. Equation Formulae

The formulae should be written in the text, centered and followed by consecutive number as Equation 1, Equation 2, and so on.

The example of formulae can be seen below (see equation 1).

$$V = \frac{4}{3}\pi r^3 \quad (1)$$

where V is the volume of sphere, π is the coefficient of circle, r is radius of a circle.

2.1.1. The Data Results

Table should be presented in editable text without vertical border. Use the font size 10 and single line spacing. The author should not use attached figure to show the table. The position of the table is in the center and the title of the table is on the upper side with consecutive number.

The example of Table can be seen in the Table I below.

Table I. Visual Comfort Perception

Scale	Building A	Building B
1		
2		
3		
		
4		
5		

Explain the meaning of the Table I clearly in the suitable context. Diagram can be used to present the research process. The diagram should be completed with legend which show the informations of the figure (Figure 1).

Figure 1 Research Process Scheme

Describe the diagram in distinctive sentences. The explanation should be suitable with the diagram content. Use the suitable type of diagram to present the data and information. Please send the figures files both embedded in the world file and in the original format with

a minimum resolution of 300 dpi. Make sure that the text and information in the figures are readable with minimum font size 9 pt. Figure, caption, and figure title should be centered and numbered consecutively.

3. Results and Discussion

3.1. Adaptation Behavior

Write down your results in a clear and brief way. Discuss the relation or comparison and interpretation of your results based on the literature review. The analysis method should be consistent with the research method in the previous section. Explain the research flow and analyze the results as clear as possible. The current results should be discussed and compared with the previous similar published article, therefore, the current research can be positioned among the similar type of published works.

3.1.1. Occupant Behavior

Present the results and discuss the meaning of the findings in a comprehensive way. Explain the analysis methods which lead to findings. After discuss the results, author should interpret the final findings which can be the essence of the conclusion.

4. Conclusions

The conclusions present the remarkable findings and contribution of the research to the relatable field. The conclusion section must not repeat the results in the previous section. This section should summarize the notable outcome.

Acknowledgments

Inform the individuals or institutions who gave contribution to this research. The participation of other institution or person can be in the form of providing grants, laboratory facility, equipment assistance, etc). Especially for the grants, please provide the number of grant decree and year of the grant received.

References

The minimum number of references is 15 written in the IEEE style which show the number and bracket. The citation style can be found in the Mendeley that the author is recommended to use the application. The references should be accessible sources and the citation given in the text should match in the reference list. Several citations should be arranged by the publication year of the sources.
