Diagnosis

Here you want to write a summary about the health of the patient using the information you've collected along with any diagnoses you have made. You will want to have a minimum of 2 sentences. An example is, "The patient is relatively fit, has a good mental health, but has below average vision level. They also do seem to be slightly overweight due to an unhealthy diet."

Treatment

Here you want to mention treatments based on your response in your diagnosis. Treatments can include things like dietary changes, life-style changes, referrals to professionals like an optician, etc. If the patient is completely healthy, still state that to keep your mandatory aspect mark. An example is, "Due to the below average vision, I would recommend the patient see an optician in order to get glasses. They should also try eating more healthily by integrating vegetables into each meal, and eat less junk food during the day."
