

Reflection: Lecture Maker.

Lecture Maker is an e-Learning content authoring software which empowers anyone to create interactive lessons and activities that can be easily deployed in various ways and the output can be SCORM compliant. With Lecture Maker, subject matter experts or instructors can create and share their knowledge and expertise by developing and distributing highly interactive and persuasive materials.

Lecture Maker is similar to power point but more advances. I always use power point in my teaching and learning process. I found that using Lecture Maker is more interesting but it came with high cost. We can use this application only for 30 days trial. We can record video, sound even flash files in our slides. The layouts are more interactive. As teachers, we can also create our own quiz using the application provided.

Overall, I wish someday I will have enough money to buy Lecture Maker software for my own use. Amin.
