

The government recently passed a law during the Covid Pandemic where if school is shut (even due to weather conditions) then work should be sent home for children to complete. We do however understand that snow is very exciting as a child and doesn't come down like this too often. Therefore, we have compiled a list of fun activities for your child.

1. **Snowball Investigation** - make 3 snowballs of the same size. Either wrap them in different materials or put them in different locations. Predict which will melt the snow the fastest.
2. **Snow Family**- make 3 snow people each of different heights. Measure the height of the tallest and smallest. What is the difference?
3. **Maths in the Snow** - using the snow as your blank paper, can you write out your timetables? Demonstrate column addition? Or maybe even draw a symmetrical pattern using different shapes.
4. **Sledging** - use a stopwatch to time how long it takes you to sledge down a hill. Now try and improve that time by thinking scientifically (more streamline, more weight, thicker snow)
5. **Cosy Read**- after a cold time outside, it's time to get warm and cosy with a good book. What's the most creative place you can read? Maybe you could enjoy a hot chocolate as well.
6. **Landmark Challenge**- use the internet to research a famous landmark in Europe. Now get creative and use what you have available to build a model of this structure. Perhaps you will use Lego, spaghetti, books or back to the snow!
7. **TTR and EdShed** - remember you always have access to these learning platforms and your passwords are in the front of your reading records.
8. Have fun and stay safe! ❄️

Please take photos of your learning and share them with us.
