

ALCHEMYSTHICRAFT

The Minecraft Server

Above is the new map for the public and patron SMP

This time we're doing a few things differently, apart from the obvious fancy google doc.

Server Info:

- Java Edition
- Version 1.18.2
- IP - 68.3.66.133:50310

Mods and Plugins:

- [Phasmo Voice](#) - **Optional** proximity voice chat mod, [Fabric recommended](#)
- [Brewery](#) - Plugin about discovering and testing all sorts of alcohol brews, with recipes hidden to allow market, trading and mastery by learning how to make 5 star drinks
- **Homes** - Set your home, warp back to home, we seen this one
- **Sitting** - Sit, anywhere (most halfblocks)

Rules:

- Discord rules still apply
- Don't steal items
- Don't claim or grief other players' builds
- Don't kill or steal other players and their mobs
- Don't build anything intentionally bad to annoy other people
 - Subjective and will be treated case-by-case, just don't expect your meme build to stay in spawn if people aren't ok with your moss house ruining the vibes, if you build that away from towns, that's okay

ALCHEMYSTHICRAFT

The Minecraft Server

THE BIG PROJECT:

Recreate Alchemysthicalia and it's many places on this island, focusing on spawn

Worth Noting:

Even if people don't want to cooperate or participate it'll still end up being a reflection of Alchemy, so don't worry if you're not *"actively working to build Cute Clinics"*

- You can still make your own houses, farms, whatever
- You can decide as a community what build should go where, or how many
- You don't need Angela's permission on where to build, just approval to be called *"official"*
- You can still build near places that have *"official builds"*, Alchemy it's about a place and its people, after all

The Paid Stuff:

Instead of having 2 servers, one for patreon one for public, we're trying out 1 single large server with 2 worlds inside of it, 1 entirely private for members, offering safety without isolating players away from everyone else

- You can link your account on the [#memecraft](#) channel, instructions are Pinned
- You can still TPA people to show your builds or show the place around, trust and safety works flawlessly here
- You can play and build on the public server if you'd prefer, or build on both and have a safer base in the Private world
- The Patreon server is an **X Eternal** reward, this means that if you were a member in the past, you'll still have access to this private world, so long as your account is linked
- You can access this world through the golden beans' portal near spawn
- Can we call it the Aether world for simplification?

Member-Only Commands:

/itemdb - Reads out item durability

/itemlore - Applies lore to an item

/itemname - Names an item

/echest - Gives access to a portable ender chest

/back - Teleports you to last known location

/nick - Changes your nickname on the server (accepts [formatting](#) with **&** instead of **\$**)

/compass - Reads out your bearings to you

/hat - You can also drag to head slot

/suicide - Yep

/chatfeelings - No Cooldowns!

/beezooka - Fires a bee

Ew Angela pay to /back - Yeah we usually can't trust these things to the general population, due to possible spam, exploit, impersonation, etc.

Shoutout to the one person who stole hundreds of diamonds, anvils and ingots from people for years just to hide it in a bunker away from everything that was only accessible with /back

ALCHEMYSTHICRAFT

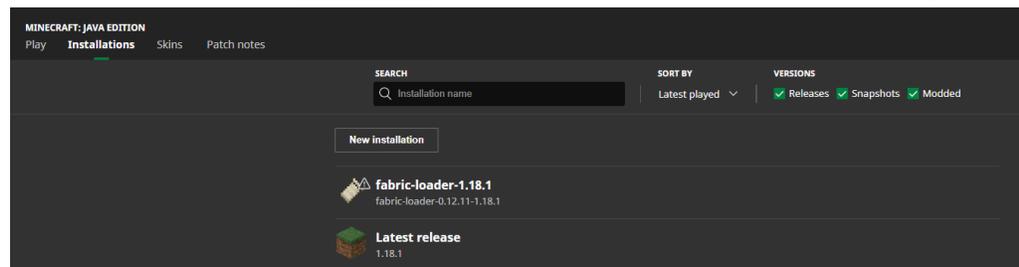

The Minecraft Server

Installing Mods - Windows

1. Windows + R
2. Type and enter `%appdata%`
3. Go to `.minecraft` folder
4. Create a folder named `mods`
5. This will be the directory for mod installation

Fabric and Voice

1. Install [Fabric](#) (or *forge* if you'd prefer)
 - a. Choose the windows version and then run the `.exe`
 - b. You may need to download [Fabric API](#) and throw it at your `mods` folder
 - c. This will create a new `Installation` on the Launcher for you to select and play on

2. Download and throw [PlasmoVoice](#) into your `mods` folder
 - a. Make sure its the right version for your modloader
3. Open the Minecraft Launcher, select the `installation` and start the game
4. Once in the server, hit **V** to configure the voice mod
 - a. Defaults are **V** to configure, **LeftAlt** to talk, **M** to mute
5. Gaming!

Recommendations

- More **RAM** for Gaming
 1. Open Launcher, go to `Installations`
 2. Click to `Edit` your modded installation
 3. Click `More Options`
 4. Under `JVM ARGUMENTS`, change the `2` in `"-Xmx2G -XX"` to the amount of ram you want to dedicate. i.e: `-Xmx6G -XX`
 5. Half your total RAM is recommended
 6. Save and play
- **Post plugin/datapack suggestions** in `#suggestion-shelf`
- **Enhance** your `[Minecraft]` with [One Weird Trick](#)

ALCHEMYSTHICRAFT

The Minecraft Server

Brewery Guide - Alcohol

[\[Click Here\]](#) If you wanna get started on how to make sick alcoholic drinks

WorldGuard - Build Protection

This is the plugin that we use for claiming and protecting land, you can read more about it here:

<https://dev.bukkit.org/projects/worldguard>

If you want to better see what you're doing, [use this mod](#)

Claiming Land:

1. `//wand` to get a wand
2. Select the area you want to claim with the wand
 - `//expand 10 up` extends the marked area 10 blocks up
3. `/region claim <title>` to claim the land
 - `/region redefine <title>` adjusts claim to new region
 - `/region addmember <title> <username>` allows access to your claim
 - `/region remove <title>` removes the claim

** Exploiting this system will get your claiming powers revoked, only protect your builds*

Sign Shops - Economy and Trade

This one is rather easy, [\[make signs like this\]](#)

- **Amethyst Shards** and **Copper Ingots** are the server's currency
- Spawn should have a small shrine to allow you to exchange those for **money**

- **Money** is used in the shop plugin, it's what enables trade signs
- You can't sell unique items like alcohol, for this, you may have to manually accept cash to later exchange for **\$** in the capitalist shrine
- Do not use **[Buy]** and **[Sell]** signs, those are for admins, you have to use **[Trade]**
- They're called *Cooinkies*
