

# Accessible Web Dev Audit

*From first click to final crumb—let's make sure your site serves everyone.*

This audit is a comprehensive check of your website's accessible code—because inclusive design isn't just a garnish, it's the main ingredient. We'll sift through your code and content using both manual checks and tools.

Every element measured and mixed with accessibility in mind. We'll identify what's fully baked, what needs time in the oven—because a great web experience should always be universally delicious.

*This Accessible Web Dev Audit is best when paired with the Accessible Brand Audit, the Accessible Print Audit, and the Accessible Digital Audit.*

## Initial Analytics

- [Google Lighthouse Analytics](#)

## Dynamic Layouts

- Content in Logical Order
- Responsive Layout
