

# NeverBounce Authentication

**!** API keys are sensitive and give access to the data in your account as well as access to verify emails. Only trusted sources should be given access to these keys to protect your account. If you suspect a key has been compromised reset the key immediately from the corresponding app's dashboard page.

Version 4 of our API simplifies the authentication schema by using static API keys that look like this: secret\_XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX. To get an API key log into your account and create a new [Custom Integration App](#). After creation, you'll be taken to the overview page where you'll find you're newly created API key.

### Your API key

This is your secret API key. It will allow you to programmatically access your account. View the documentation to [learn more](#) about what you can use the API for.

secret\_XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX

Click here to [reset the API Key](#). This will replace the API key disabling the previous key.

*Custom Integration Overview page*

If you need to revoke or change the key, click "reset the API Key" in the API key section.
