Elixir Engineer

We are a media arbitrage company, working with large publishers and partners.

A suitable candidate would have at least 2 to 3 years work-experience with projects built with Elixir and OTP. Someone who could start working with Elixir, from the word go, without day-to-day hand-holding.

Candidate is expected to take complete ownership of individual projects, with minimal guidance, as and when required.

Must Have:

- Good understanding and hands on experience of Linux OS is a must
- Decent understanding of Docker and how to deploy services with it
- Knowledge of using Git in a team environment
- Worked with Relational Databases
- Good problem solving skills and ability to debug complex issues and coming up with effective solutions

Wonderful To Have :

- Experience with any Cloud providers is a bonus
- Good communication skills and keeping the state holders informed in a remote working environment

Technologies: Elixir, Git, Google Cloud, Docker, Kafka, Postgres, Elastic

While applying for the position, the candidate is expected to provide as much details regarding the Elixir projects, worked in the past. Something beyond the standard CV mention.

This allows us to comprehend your working knowledge base, basis on which we could frame the right interview experience.

You would be also required to prove your prowess with Elixir/OTP in a LIVE environment, with real world problems, which we encounter or you are expected to resolve in a typical day.
