13th January 2023

Join the call 11:30-12:20 CET (UTC+1) at
https://teams.microsoft.com/l/meetup-join/19%3ameeting_MWRiMWZmZmUtN2U1Ny00MTJmLThlZjItODI0NWFhZTg2NjM2%40thread.v2/0?context=%7b%22Tid%22%3a%221d2fb688-47ea-4f12-9da3-c222aa05a78c%22%2c%22Oid%22%3a%220ba4f0e0-a145-4f3a-91ba-ac4d0f8bfe0e%22%7d

Participants

- **Florian Gantner (University of Bamberg)**
- **Oliver Goldschmidt (Hamburg University of Technology)**
- **Dirk Eisengräber-Pabst (Fraunhofer)**
- **Jordan Piščanc (University of Trieste)**
- **Nathaly Sipiran**
- **Mykhaylo Boychuck (4Science)**
- **Corrado Lombardi (4Science)**

Agenda:

- DSpace-CRIS7 2022.03.00 release
- Overview to part of 4Science's contributions to DSpace 7.5

Meeting notes

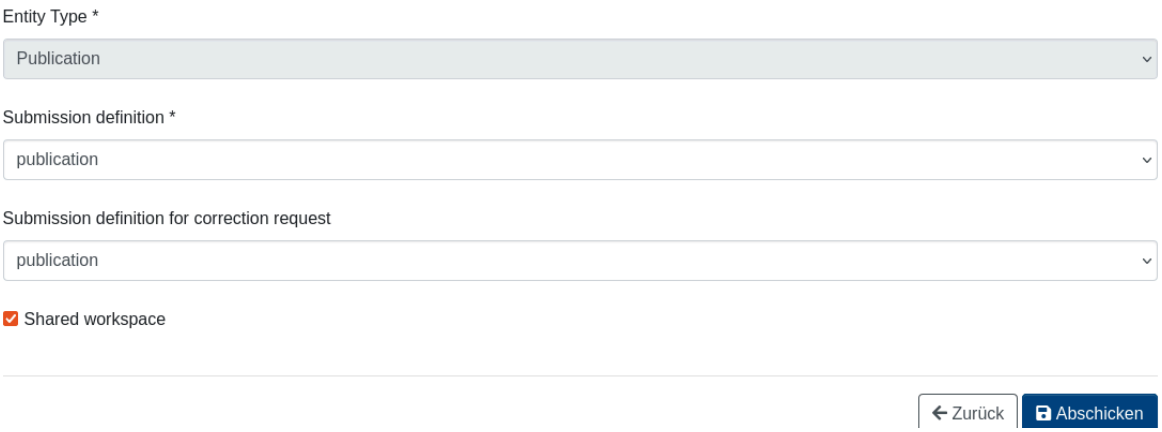

DSpace-CRIS 7 Working group Call 13.01.2023.pptx

Meeting Questions and Answers

- **In controlled vocabularies, can I store the metadata value with another value and not with text1::text2::text3?**
  - Yes, the values are defined in xml files under "/config/controlled-vocabularies/" directory. "label" attribute of xml nodes allows setting values according to the Institution's needs. Just to mention, if values are adapted and there are mapping in place to convert values during live import or harvesting ("mapConverter*.properties" file) targeting values of a controlled vocabulary, be sure that mapped values match what defined in vocabulary's xml configuration. Also, in "authority.cfg" file it is possible to customize the delimiter ("vocabulary.plugin.<vocabulary name>.delimiter", default is "::") and to decide whether or not the full hierarchy must be stored in metadata value ("vocabulary.plugin.<vocabulary name>.hierarchy.store")

- **Is multilanguage supported in controlled vocabularies?**
  - Yes, it is. The only need is to provide a translated xml file at the same path of the original, with "_<language-iso-code" as suffix in file name. E.g. for OECD types controlled vocabulary, "oecd_de.xml" would be the German version of "oecd.xml". Then valuepair rendering ensure that in Item details page, the controlled vocabulary value is properly available in context's language (or default English in case translated data is not available).

- **[already solved in the meeting presentation] sharedWorkspace (checkbox at collection edit since 7.0). Differences to otherWorkspace or is it the same function?**

- **Should it be possible to define, in Shared Workspace, which co-authors can edit a Workspace item and which cannot? Also are the different users involved in Workspace item edit and submission notified in some way when another user changes metadata in workspace item?**
    - Not in this first release, but are both nice to have enhancements worth a “product level” discussion

- **Is there any reason why my collections do not appear in the export option? Or when I export a collection from the collection view, some metadata is not downloaded. I did a clean CRIS install, then import my dspace 5.1 database, upgrade, import my assetstore, solr and everything seems to work fine but exports not quite.**

Next meeting proposed agenda

date 14th of February 2023
