

So You Wanna Mod Skyrim (But with SEKS)

A Guide By Lovely Luna

[Nexus Mods](#)

[Subscribestar](#)

[Pornhub](#)

[X](#)

If you are seeing this via PDF, you can click [here](#) to see the google docs version I aim to keep up to date.

Modding Skyrim can be as easy or as difficult as you like depending on what you want and the time you're willing to spend on your build. I'll outline methods here and then we'll get into specifics later:

Install via [Wabbajack](#) (difficulty rating: 4/10)- Installs a whole modpack for you! You can get one with sex mods installed and be done with it

Pros:

- **You'll only have to follow the pre-installation part of this guide + some instructions for whatever modpack you choose pretty much everything else is 90% automated for you assuming you buy a nexus premium subscription (it can be done for free but it will annoyingly have you physically click "download" on every single mod that you need)**
- **No need to look for mods, whoever made the pack has handpicked every mod they believe is worthwhile.**

Cons:

- **Most modpacks require a mid to high end machine to run them**
- **Most have a good balance of gameplay and sexual elements, but will not curate to any specific or niche eh... fetishes. This of course can be a pro if you just mainly want vanilla stuff.**

Manually modding (difficulty rating: 6/10)- Specifically choose what you do and don't want on a mod by mod basis. This is mainly what this guide focuses on.

Pros:

- Have your skyrim specifically curated to your likes and hardware specifications
- Be able to include realllllly specific sexual scenarios like: Futa, inflation, monster girls, BDSM, sex with giants, etc. Honestly name a niche fetish and I'm pretty sure there's a mod of it.

Cons:

- You have to look for and manually install every single nuanced mod that you would like which can be a bit of a drag (Think mods like "HD Chickens" and packs of eyebrows for character creation if you want stuff like that)
- You will, inevitably, hit a roadblock or two and have to troubleshoot your modlist. It is a very common joke within the modding community that it's normal, if not expected, to spend more time modding than to actually be playing the game.

Install a foundational modpack and then build upon it by manually modding

(difficulty rating 8/10)- Have a modpack install all the foundations for a good looking skyrim with updated gameplay elements, then install all the dirty things you want on top of it.

Pros:

- **Saves you a lot of time looking for and installing basic essentials so you can focus on the specific elements that you do want.**
- **Get the benefits of both manually modding, and getting a modpack.**

Cons:

- **You will also get the headaches of manually modding amplified x3.**
Understand that these modpack creators spent a lot of time making their modlist and making sure the elements work well with each other, by manually adding/deleting mods we are kinda throwing a wrench at all that.

I have personally made successful builds with the Anvil and NVGO modpacks as foundations, but had to solve about 100 headaches before I got to a point where I was satisfied with it. As a result I can't really provide guidance on building upon modpacks because the issues you'll encounter vary wildly between modpacks and what mods you are trying to install. The only people who should be attempting this are experienced modders who are capable of solving their own modlist troubles anyway. With that being said, most of my videos were 100% made in a manually modded skyrim so honestly just because this is a more difficult method it does not necessarily mean that it results in a better skyrim.

Not sure what to choose? Here are some reference points.

[Nefarim](#) and [Lincentia](#) are two modpacks from wabbajack that I've heard good things about so if they seem cool to you, install and enjoy!

what you see in [this video](#) is my build using the NGVO modpack + a ton of my personal additions. If you do decide to build upon a modpack I generally advise to choose a pack that is mainly focused on essentials and graphics. As for all my pornhub videos published before the video I linked above, those were all done with manual modding + a ton of video editing of course.

Pre-requisites and Pre-installation Steps

1. Own a legit steam copy of Skyrim Anniversary Edition on your windows computer up to date to the current version being 1.6.640/1.6.1170. Technically speaking you can NSFW mod ANY version of skyrim on steam, but for the sake of avoiding troubleshooting headaches, I highly recommend you purchase Skyrim AE on steam and mod that. If you use wabbajack chances are that your modpack can only be exclusively installed on this version of Skyrim. You will not be able to NSFW mod any skyrim not on steam, like from a gamepass or pirated, or any copy of skyrim on a console.
2. Install [Visual C++ x64](#) and [.Net Runtime v5 desktop x64](#)
3. Make sure that Skyrim does not update on its own without your permission. You can do this through steam but the most secure way is by following the instructions on this [post](#).
4. Open up the steam store to find, download, and run "Skyrim Special Edition: Creation Kit" once, then close it.

Additional steps If you are going to use Wabbajack

5. Have a modded Skyrim AE installed on steam already? I highly recommend you uninstall it so that you can start from a fresh state.
6. Install skyrim in a location that is not program files, ideally on another drive if you have one so long it's not one of those USB external ones. If you only have one drive, or just having trouble with this step, [follow this tutorial](#).
7. If you reinstalled Skyrim, launch from steam so that it does its graphic check and go to the main menu, it will prompt you to download the AE content and let it do so. Do not tab out while it does this because it can cause issues with the downloading process.
8. Download and install [wabbajack](#) somewhere that is not your program files, desktop, or downloads folder. Something like C:\games\Wabbajack is fine.
9. Run it and do your research on whatever modpack you want to download. Every modpack should have its own set of instructions it will give you when you try downloading it.

And as a final pre-requisite be ready to do your own troubleshooting if necessary. I do my best to streamline this process and make it as easy as possible, but the fact is that mods are constantly being updated and no one can accurately predict how mods will act with each other. Chances are, someone had the exact same issue as you and has had it solved on reddit/discord or somewhere else.

The rest of this guide is mainly for people who decide to manually mod in some way

You will be using [Modorganizer2](#) to add these mods to your game. If you're not familiar with this tool, watch a tutorial or two to familiarize yourself with it since this is the tool that actually adds/deletes mods to your game. You can definitely do this on any mod organizer but I highly encourage that it be done on MO2.

Part 1 The Foundations

These mods layout the base and foundations for the sex mods and regular mods you will install later. Install everything via your mod manager unless otherwise stated. Be sure to double check that you have the requirements for every mod when downloading!

1. Skyrim Script extender

How to install and where to get it:

https://www.youtube.com/watch?v=IcBhQcVzCwQ&ab_channel=Apoqsi

Skse extends scripting capabilities ingame, which many mods will require. Be sure to get the right version for your game. And from now on, you will launch Skyrim through SKSE executable, either from your mod manager or data folder. Do not launch via Steam.

- 2. [Unofficial Skyrim special edition patch for AE](#)**
- 3. [Address Library for SKSE Plugins](#)**
- 4. [SSE Engine Fixes](#)**

This mod has special instructions:

- Download the first part of the mod and install via mod manager
- Download part 2 of the mod, extract and put the files in your Skyrim data folder.

Need a video guide for this part? You can see one [here](#)!

5. [JContainers](#)
6. [PapyrusUtil](#)
7. [Papyrus Tweaks](#)
8. [Sky UI](#)
9. [UIExtensions](#)
10. [ConsoleUtilNG](#)
11. [Fuz Ro D-oh](#)
12. [Forces New Idles In Skyrim \(FNIS\)](#)

This mod has special instructions for installing with mo2 that are described best in this [video](#). If you plan on giving animals animations then make sure to also get the creatures pack.

13. [BodySlide and Outfit Studio](#)
14. [XP32 Skeleton](#)
15. [FSMP](#)
16. [MFG Fix NG](#)
17. [Optional Quick Start](#)

Checkpoint 1: Run Skyrim to make sure nothing explodes and everything is working fine. Don't commit to a playthrough until you're satisfied with your build.

Part 2 Beautify The Skyrim Environment

Great, you've laid the foundation out. Now it's time to make the environment and lighting look pretty. These are all optional so feel free to skip if you already have something in mind or installed.

18. [Static Mesh Improvement Mod \(SMIM\)](#)

19. [Skyland AIO](#)

20. [JK's Skyrim](#)

21. [Skyrim Flora Overhaul](#)

22. [Tamrielic Grass](#)

23. Atmospheric Overhauls and Enhanced Natural Beauty (ENB)

[Video on how to install an ENB](#)

[Here is a good video showing the difference between some ENB's](#)

Here are some really good and popular Skyrim ENBs

[Silent Horizons ENB](#)

[Rudy ENB](#)

[Skyrim Re-Engaged ENB](#)

24. Weathers (Choose one that is compatible with your ENB)

[Obsidian Weathers and Seasons](#)

[Cathedral Weathers And Seasons](#)

25. [Realistic Water Two](#)

Checkpoint 2: Run skyrim to make sure the environment looks nice and your ENB is installed correctly.

Part 3 Making your characters beautiful

Unless you actually want the look of vanilla NPCs in sexual scenes, you'll want to have some of these mods.

26. NPC Overhauls

There are a ton out there I just list these as examples I use

[Jampion NPCs](#) for males

Bijin [NPCs](#), [Warmaidens](#), [Wives](#) for females

27. [Either CBBE UBE OR BHUNP Body Replacer](#)

I am linking CBBE because that is what I use, the other two are completely viable options as well. Generally speaking, CBBE has a slightly curvier body whereas BHUNP has a thinner, more athletic body. UBE has the most polygons and the biggest ability to be customized. But because it's newer, it seems that most of the armors I like using are still mainly CBBE supported. So, for the time being, I'm sticking with CBBE. Of course make sure that you enable the nude option when installing.

28. Skin texture for women

No point in choosing more than one because one will overwrite the other. I have some suggestions here but feel free to choose whichever one you like on the nexus.

[Bijin Skin](#)

[Diamond Skin](#)

[Leyenda Skin](#)

29. [The New Gentleman](#)

This is a body replacer for men, I like this one because you don't have to download any other mods to give them a penis.

30. [CBPC](#)

31. [CBBE 3BBB](#)

32. [Racemenu](#)

33. [High Poly Head](#)

34. [Expressive Facegen Morphs](#)

35. [Expressive Facial Animation Female Edition](#)

36. [Expressive Facial Animation Male Edition](#)

Great! This is the core to be able to create and import pretty characters into your game!

There are a lot of good ones on the nexus, including some that I've [made](#) ! More to come as time goes by! Make sure you download all the requirements needed for the character if you want them to look as similar as possible in your game. If you have trouble importing them or don't know how I made a video on that on [youtube](#).

The following are the most common character cosmetic mods that I personally use. If you download any of my presets chances are you are going to download most of these anyway.

- 37. [Brows](#) and [Kyoe's Bang'n Brows](#)
- 38. [Community Overlays 1](#), [Community Overlays 2](#), [Community Overlays 3](#)
- 39. [Wolfpaint](#)
- 40. [Barbarian Bodypaints](#)
- 41. [Female Makeup Suite](#)
- 42. [Skin Feature Overlays](#)
- 43. [The Eyes Of Beauty](#)
- 44. [KS Hairdos - HDT SMP](#)

(NOTE: the HDT SMP requirement for this mod has been replaced by the FSMP that I have earlier in this guide, so don't download HDT SMP)

Part 4 Bodyslide and outfits!

There are like a million bodyslide presets you can find on the nexus, so feel free to explore. But to give you a starting point, I made some of my own that you can find here:

- 45. [Luna's CBBE Bodyslide Presets](#)

The file linked is a pack containing 5 different bodyslide presets of different body types, their descriptions are as follows:

LL Petite: Thinner/Smaller proportions, intended to be used for smaller characters

LL Thicc: Generous Proportions, I use this for the bulk of my characters and videos!

LL Best Of Both: An inbetween of LL Thicc and LL Petite

LL Mommy: Very generous proportions and larger belly.

LL Sporty: Thinish waist and largish breasts.

46. [BD's Armor and clothes replacer](#) for making vanilla armors skimpy OR [3BA Vanilla outfits redone](#) for more lore friendly 3BA vanilla armors. NPCs in game will be using these so choose one or the other based on what kind of immersion you're going for.

47. [Bikini Armors Remastered \(TAWOBA\)](#) And [Nimirim Collection](#)

My personal favorite armor packs, you can make a follower equip these if you wanted to but I mainly use them for the player character.

So now that you have your body and armors it's time to open bodyslide through your mod manager and have these applied to your ingame characters. Here's a quick tutorial for those unfamiliar with bodyslide.

1. Open the bodyslide program through your mod manager, then on the Outfit/Body Box, click on it and select “CBBE 3BBB Body Amazing” from the drop down.
2. In the Preset box, select a downloaded preset from the dropdown box. If you are using one that I made it will show up here, click on the one you want your female player character to have, or NPCs if you’re not playing a female character.
3. In the bottom left, click on “batch build” and build.
4. Go back to the outfit/body box and select “CBBE 3BBB Feet” and repeat the same steps, then do the same for “CBBE 3BBB Hands”.

Part 5 Sex Stuff Time

You're finally here, the part where you're actually ready to turn Skyrim into a sexy game.

There are multiple sex mods out there, but generally speaking sexlab has the most versatility, so this guide focuses on that.

48. [Sex Lab Framework](#)

49. [SexLab Animation Loader \(SLAL\)](#)

50. [Matchmaker](#)

There are a lot of animation packs out there of varying quality. In my opinion, Billyy and Anubs make the best and most varied animations, if you've seen my videos, I pretty much only use theirs. When installing, make sure you do not check the "invisible furnitures" option unless you know what that is.

51. [Anubs](#)

52. [Billyy](#)

53. [Sir Nibbles](#)

54. [ZAZ](#)

55. [Leito](#)

56. [Milky](#)

You're in the homestretch at this point. These are the next steps. Run FNIS, launch the game, make a fresh save and do the following

- Wait a few minutes for the MCM to register any new mods
- Go to the sexlab MCM and press the "Install" option. Close all menus and wait in game until you get a notification at the top left of your screen saying that it is ready.
- Go to the SL Anim Loader MCM and you will see an option to "enable all animations" and select it. This could take a few minutes, it's normal. Then press the "register all animations" option. Depending on how many packs you installed this can take like 10 whole minutes. Just don't tab out or close the menu until you get the confirmation message that it worked.
- Go to the mass matchmaker MCM > Config > Check the Manual Select Mode option.
- Go to your spells and equip and use the "Mass matchmaker Gangbang self" spell and select an NPC (your game will be kinda wonky and maybe even lag a bit before the animation starts, this is normal). This is just to test that sex animations are working.

If you want creature animations you're gonna need a few more things

[Sexlab Aroused NG](#) Implements an arousal system for sexlab, this is needed for creature framework.

[Creature Framework](#) - The foundation and groundwork for creature sex in Skyrim.

Download both the creature framework mod and the hentai creatures mod. Then follow the instructions on the mod page to get more nasty critters (MNC).

[Baka ABC \(Animated Beast Cocks\)](#)- This allows animations on creature peepees.

The animation packs mentioned earlier also have creature animations included so you don't have to get any additional ones. Now you will:

- go to the sexlab MCM and find the "allow creature animations" option and check it on.
- go to the hentai creatures tab in MCM and select "dump spells on you"
- If you did get hentai creatures in your MCM, Go to your conjuration spells and summon your choice of creature, press the talk button on it and select mate.
- If it doesn't work then either find a creature or spawn one in with console commands and then use the massmatchmaker spell mentioned earlier.

"Now what?"

If everything works up until now you've succeeded in creating a nsfw foundation modlist, everything beyond this point are additional mods for you to explore your sexual

fantasies. If you find one that isn't mentioned here that you think I should add then send me a message or comment somewhere so I can update this :)

Sexlab Addons and Fetishy Stuff!

Please! Be advised you are now entering the wild west of skyrim and some of these mods may not work on the current version of Skyrim + may need additional mods to function.

- [Thief](#)
- [Troubles Of Heroine](#)
- [Bikini Armor Quest](#)
- [Devious Devices NG](#)
- [From The Deeps](#)
- [Dovahkiins Infamy](#)
- [Obody](#)
- [Simple Slavery](#)
- [The Unsatisfied Ghost](#)
- [Dirty Deeds Missives](#)
- [Sexlab Confabulation](#)
- [Sexy Adventures](#)
- [Sexlab Parasites](#)
- [The Book Of Sex](#)
- [The Ancient Profession](#)
- [Immersive Wenches](#)
- [Slave Girls](#)

- [Murder Theft and Seduction](#)
- [Sexlab Solutions](#)
- [Sexlab Adventures](#)
- [Sexlab Defeat](#)
- [Sexlab Eager NPC's](#)
- [SLSF Fame Comments](#)
- [Fertility Mode](#)
- [BaboDialogue](#)
- [Populated Skyrim Baka Edition](#)
- [Sexlab Horrible Harrassment](#)
- [SLAP Redux](#)
- [SOS Addon Futanari CBBE](#)
- [Fill Her Up](#)
- [Maelstorm](#)
- [Sexlab Extra Voices](#)
- [Milk Mod Economy](#)
- [Femboy Race](#)
- [Furry Mods](#)
- [Interactive BDSM](#)
- [Darkwood Manufacturing toys](#)
- [Creature Overhaul](#)
- [Animal Mansion](#)
- [Bannered Mare Immersive Sexual Playground](#)

- [Milk Economy](#)
- [Children of lilit](#)
- [Working girl](#)
- [Submissive lola](#)
- [Sexlab Smooth Expressions](#)
- [Wet Function Redux](#)
- [Shadowmans mods](#)
- [Blush When Aroused](#)
- [Crawl on all fours](#)
- [New Flame Atronach](#)
- [New Hagraven](#)
- [New Dwarven Centurion](#)
- [New Spriggans](#)
- [New Spriggans Matron](#)
- [New Female Draugr](#)
- [New Wispmother](#)

The following are all retextures to make just Skyrim more lewd

- [Porny Loadscreens](#)
- [Porny Books](#)
- [Porny bookcovers](#)
- [Porny Paintings](#)
- [Porny Statues](#)

- [Porny Kitchenware](#)
- [Porny Signs](#)
- [Porny Banners](#)
- [Porny Darkbrotherhood stuff](#)
- [Porny Alduins wall](#)
- [Porny Astral Signs](#)
- [Porny Skill Tree](#)
- [Porny wall of kings](#)
- [Porny nordic murals](#)

WOW This guide took a lot longer for me to write than expected, if you're reading this you're awesome!
