WebCompat Q4 OKR Drafts

webcompat work

- Site Outreach - Needscontact / contactready backlog push
- Softvision - Revisit Sitewait issues once
- Softvision - TSCI testing - dedicated testing session of the top 10 domains
- Softvision - Manual testing of one "chrome only" domain
- Diagnosi
-

webcompat Metrics

- Platform Gap metrics continuation
- Softvision - TSCI - weekly confirmation
- Metrics dashboard improvements -
 - Integrate and host TSCI
 - Show engine-gecko trends

webcompat application work

- Webcompat.com frontend work -
 - Migrate to Webpack from Grunt
 - Finish console.log display improvements
 - Refactor POST form submission to GET and send all Report Site Issue data via postMessage (similar to screenshots)
- Webcompat images work
 - Migrate webcompat image hosting to cloud
 - Create a backup system for the images (redundancy in case of a blipz)
 - Remove Duplicate and/or unused images on the server. Aka images which are not called from anywhere. Save space, and potentially remove images which were not necessarily meant to be there.
- Investigate dockerization of webcompat.com application

webcompat tooling

- Report Site Issue web extension as Android component
- Investigate about:compat in Fenix
- Automated tracking of interventions dashboard
 - "Build a dashboard that shows the version number, amount of injections, and amount of user agent overrides for: mozilla-central (Firefox Nightly), mozilla-beta (Firefox Beta), mozilla-release (Desktop Release), and android-components."
