About Me 🗨️

- I am a mechanical engineer by trade, however, my career pursuits have been anything but. I started off as a developer, then moved into Product, from which I transitioned into Venture Capital, and now back into Product.
- The idea of being a well-rounded individual is an important core value both in my personal and professional life.

Leadership Qualities I Value?

- Active listening and creating an open environment where everyone feels valued and heard
- Empowering team members to make decisions and contribute effectively
- Guiding the team through uncertainty with a composed and solution-oriented attitude
- Encouraging a culture of accountability where everyone takes responsibility for their roles

What Energizes Me? 🍋

- I thrive when I'm engaged in strategic discussions, problem-solving sessions, and creative brainstorming
- Collaborative teamwork; I thrive in environments where ideas flow freely

What Depletes My Energy? 📶

- Repetitive tasks without clear purpose or direction
- Meetings longer than 1 hour regardless of the topic of discussion
 - For regular updates, I prefer short, focused meetings that keep the team aligned
- When there is no time for individual work or time to think

When Am I Most Productive? 🏡

- Mid-day and late evenings

Introvert or Extrovert? 😊

- In my personal life I'm an extrovert, however, in the workplace, I am an ambivert
 - I enjoy both focused solitary work and meaningful interactions with team members
 - A balance between the both is key to recharge myself

What is My Approach to Problem Solving? Research or Dive in? 🤔

- I tend to be a risk averse person, so I tend to start with comprehensive research and data analysis before diving into problem-solving. A well-informed decision is a strong decision.
 - However, I do consider intuition that comes from experience.
- I am trying to be more of a person that dives-in to challenge myself and make more mistakes.
