

Urban Updates Chat Resources

- Kevin Allison: Just an EQIP fyi, if growers are doing Mulching 484 through an NRCS program and using compost, the compost should be plant-based (non manure).
- USH: Do you have access to leaves? Phosphorus is likely really high with the manure, and that's definitely something to pay attention to regarding run-off to waterways too. We can help you do a soil test on the land where you've applied it in the past to see where you are now.

- Ashley Adair:
 - If you are an ag professional planning to attend the Indiana Organic Grain Farmer Meeting, you can use the code SARE25 to attend for a \$0 registration fee! We have 7 spots left!
 - We have 4 CEUs for CCAs available as well 😊
