

List 2-3 main ideas your group wants to focus on including in the summary:

1. Reducing exposure to BVDV pathogens by identifying and eliminating infected cattle
2. Antibiotic treatment may eliminate the carrier stage of leptospirosis.
3. Vaccines are necessary to use along with other control methods to reduce the risk of reproductive pathology.

Write a 1 sentence summary that includes the aspects that your group agreed upon and be sure to provide the **full** citation following your group's assigned format:

Controlling the spread of BVDV and Leptospirosis is a multistep process that includes reducing exposure to pathogens through identification and elimination of infected cattle, eliminating the carrier stage through antibiotic treatment, and creating a vaccine program in conjunction with other control methods to reduce the risk of reproductive pathology (Grooms, 2006)

Grooms, Daniel L. 2006. Reproductive losses caused by bovine viral diarrhea virus and leptospirosis. Theriogen. Volume 66, Issue 3, August 2006, Pages 624-628
