Summary of ADZbuzz Change Release v1.0.2016.46.0

This release includes the following:

- ➔ **Internal Sharer Feature Hotfix 1.0**
  - ◆ Fix the issue where the internal share feature did not work when the shared post does not have post text / description.

- ➔ **Introduced ADZbuzz new image logo on the website (both header and favicon)**

- ➔ **Cached ADZbuzzer preview images**
  - ◆ Before, no copied of ADZbuzzer preview images are saved on our server. They are served from the original image source they were taken which broke the https on our site and also caused uncontrollable site load speed due to these external resources (images) loaded on our page.
  - ◆ Now, the ADZbuzzer will now save local copies of the preview images on our server and serve those images locally when they are available.

- ➔ **Main Homepage and Backoffice modifications**
  - ◆ Removed unnecessary items on the sidebar and header sections
  - ◆ Added a "Threads Right Now" section on the main homepage's sidebar which shows the recent interactions on the ADZbuzzer-generated contents

- ➔ **Cleaned the old login page**
  - ◆ Removed the Pixel board and the footer so that it looks neat specially when shown on the ADZbuzzer page (when people clicked on the ADZbuzzer but not yet logged in to ADZbuzz)

- ➔ **Never Automatically Logout Security Enhancement 1.0**
  - ◆ Enhanced the feature so that user logins cannot easily get compromised even if their browser cookies are hacked.

- ➔ **Other Bug Fixes**
  - ◆ Issue: Send Message button in Settings-> My Affiliates is not working, nothing happens when clicked (FIXED)
  - ◆ Issue: On User Settings page (general settings, etc…) the Success or Error message that normally comes out after clicking the save button is no longer

visible. Users are confused whether or not the change they made are saved or not. They have to refresh the settings page to verify if the changes are saved. If the changes are not save, there's no way for them to see the error message it seems. (FIXED)

◆ Issue: Links in adverts page are not working after switching to SEO-friendlier links. (FIXED)
