

Delayed Diagnosis = Lost Opportunity

Could it be ALS?

#ALSPromptDx

More than 50% of people who eventually are diagnosed with ALS, are first *Misdiagnosed*; some multiple times. They lose precious months, miss out on treatment opportunities, and even undergo inappropriate surgeries.

Prompt ALS Diagnosis = Early Access to Treatments ... which can Slow Progression

POTENTIAL EARLY ALS SIGNS

- Unexplained muscle weakness, without pain?
- Unexplained falls or change in gait?
- Unexplained speech or swallow changes?
- Twitching in arm/leg muscles, or tongue?
- Other unexplained muscular changes, which 'just don't add up'?

Time is Everything with ALS
