Demos

1. The first demo has a sensor with a light, that if you put an object or something next to it, the lights turn on and start beeping, and depends how close is the object to the sensor, the light will turn yellow-orange or red. and the beeping will be louder if the object is more close.
2. This second demo show us that if you press a keypad a pattern occurs in the led lights. And some of them are on and other one are off.
