## Topic: Additions (enhancement of Extensions and Templates)

Todo: [File a bug](#)

### Issue/Problem

- Extensions/Templates are installed in a laborious workflow that includes activities in the internet browser
- The scope is limited to only extensions and templates
- Simplicity first cannot be maintained with growing features and expanding options

### Current State

### Features/Functional Requirements

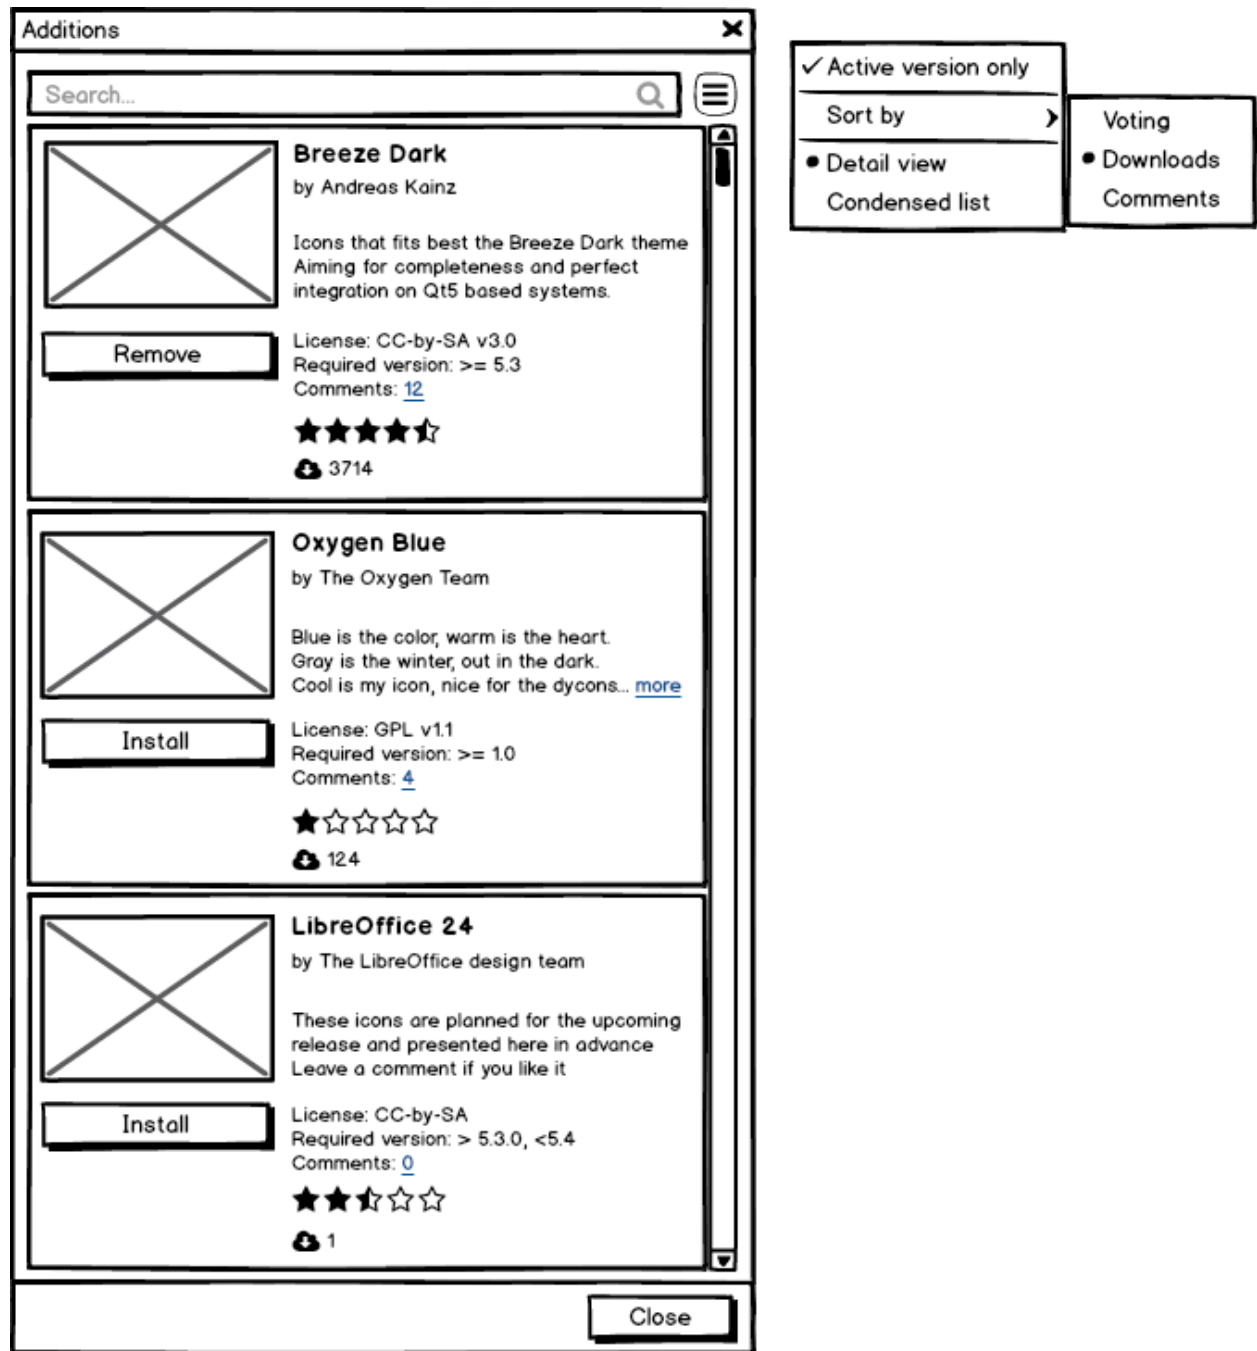

- Benjamin wants to browse the additions by name and author and get a short summary.

- Benjamin wants to restrict the shown additions to the current context and the program version.
- Benjamin wants to get information on the number of downloads and the average rating (or number of thumbs up) to find interesting additions.
- Benjamin wants to see the number of comments with an option to read what other users think about this addition.
- Benjamin wants to install new additions without any further interaction, at best without the need to restart the system. New additions have to integrate seamlessly into the program.
- Benjamin wants to remove previously installed additions to keep the system clear.
- Benjamin wants to vote an addition and have the opportunity to comment, at best without the need to open the browser but he accepts this step.
- Eve wants to upload additions in order to share what she made.
- Eve wants to make sure that her addition is working by restricting it to a certain version.
- Adrian wants to distribute additions for the users in his enterprise only.
- (Benjamin wants to make a fortune by getting paid for the additions he made.)

## Scope

- Extensions (existing but needs improvement anyway)
- Templates (no need to include more than a few templates or to have competitions)
- Icons: Breeze Dark? Don't mind ([tdf#94632](#))
- Fonts: Sans Pro, Noto, or Liberation... everything! ([tdf#97577](#))
- Extended Toolbars (and extended sidebars as well): One or two different UIs? Get them all!
- Personas/Skins: Yes, please! ([tdf#86544](#), [df#93599](#), [tdf#33232](#))
- Menus: Get changes reverted and then wait for the next release? No. (tdf... many)
- Locale: Forgot to install French UI? ([tdf#82184](#))
- Gallery (clipart): Too many ugly objects? Move into the additions stuff.
- Gallery (custom shapes): No idea how to install shapes? Piece of cake.
- 3D Models?: Absolutely (<http://listarchives.libreoffice.org/global/design/msg07347.html>)
- Table Styles, Area fill patterns: No need to include and distribute all options
- X-mas edition of document themes: Marketing can do that
- [tdf#99784](#))

## New design/Mockup

### Jay's comments:

- \* title should be clickable to open webpage
- \* image should likely be clickable to see a higher resolution image
- \* it should automatically filter out entries that dont reach the additions LO version requirement.
- \* doubt most users would care about licensing and system requirements

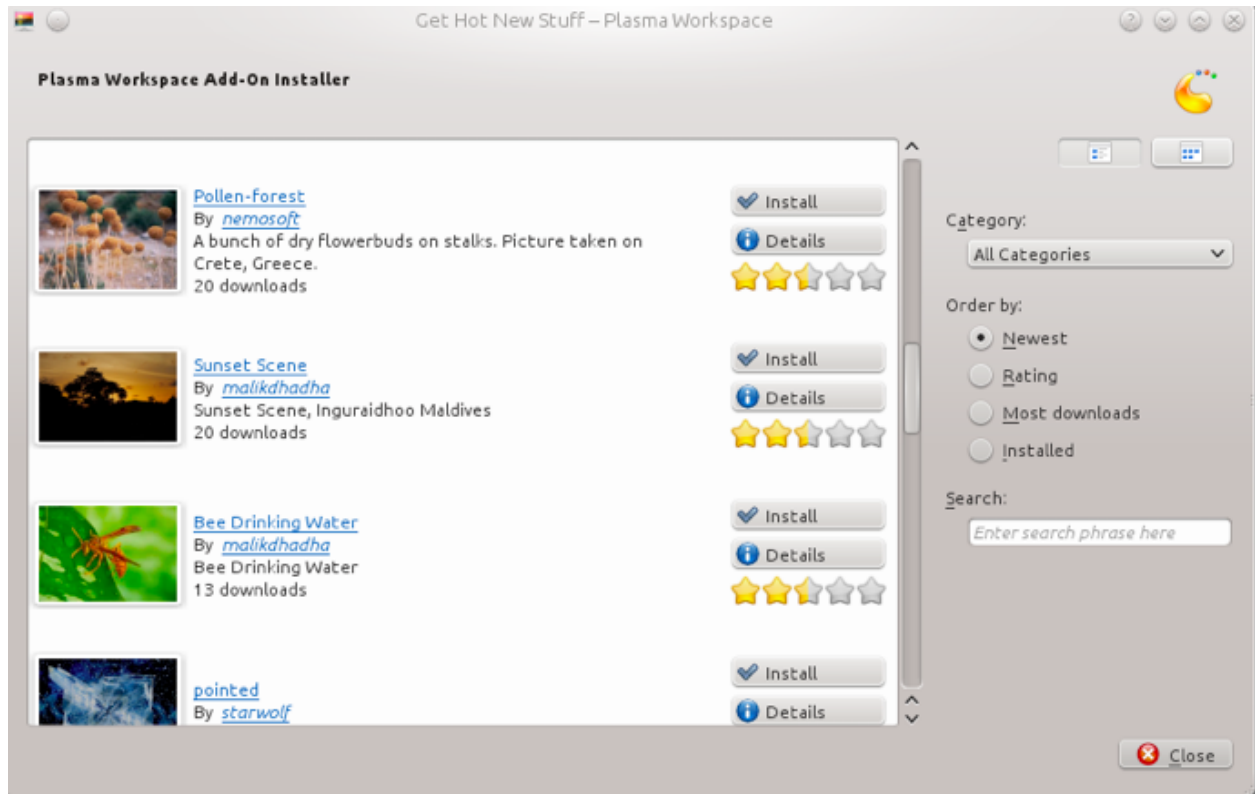

## Competitor analysis
