

Story ideas

Original glitch hero idea

Themes I want to talk about

- The effects of escapism on the human mind and social life.
- How the power and creativity of the human spirit shapes the world around us.
- The effects of AI replacing human creativity and agency to a point where we lose our free will.
- The problems with being misunderstood as an autistic person.

World-building

What if the fabric of reality were codes in a video game- than the universe would be like a system of a video game.

What does that make black holes and other cosmic anomalies- Glitches in the system that warp everything around them.

What was the big bang like in this universe- it was more like the big spark that helped boot up the system.

What makes them big spark different from the big bang- the big bang was an explosion that birthed the universe. While the big spark was the power source the booted up the system that runs the universe.

Were there remnants of the big spark- Some small sparks managed to glitch out the system sometimes. Though they're still exponentially rare and whoever finds one is given God hood.

Why are they given God hood- cause who ever holds a fragment is able to glitch up or even rewrite the fabric of reality to their whims. Though overuse of it can lead to the weirder eventually losing their sanity.

Have any sparks been found- Nobody in the entire universe has found one yet, making them more like a made up fairytale. Though on earth it seems to have become a reality.

Does this mean all life is nothing but cosmic Ai- Everything born in the universe is ai in the grand scheme of things. Even the person next to you is an NPC in this grand open world game we call life.

How was the fragment found - Around a few decades ago, the lead scientist of Glamor-incorporate discovered the fragment while mining an asteroid for resources.

Story ideas

What did they do with it- at first they sent it research, but soon they discovered its properties could be more useful to it's profits.

What is Glamor-incorporate exactly- a multi-million-dollar company responsible for advancement in Ai. It originally was just a small business dealing with the creation of Ai generated data. But since the fragment came into their lives, business has been booming, despite the nasty side effects.

What is their greatest achievement- that would be the glamor-visor, a wearable visor like mobile devices that generates content on command.

How does it work- Thanks to the fragment's energy, each visor can create content and ideas in mere seconds. Rather it be heling someone come up with ideas for an essay or even make content outside the internet. Their link to the artifacts allows them to make each idea materialize into real life.

Are there any special features- there's a special play mode that let someone to enter virtual reality for gaming purposes. And if your lucky enough to get premium, where you get to look like your favorite character.

What is the virtual reality like- it's a vast digital fantasy world where people experience an RPG first hand. It's full of ever-expanding dlcs and updates that make getting bored impossible. Some say the world is a bit too generic sometimes, but nobody complains about slaying a digital dragon in person.

This world is truly a fantasy made of bits and polygons. But those who get too attached are at a risk of glitching out. And when you glitch out, you're trapped there in their avatar forever.

How do you escape the coma- You either take off the visor, play in moderation, or prepare to living a fake life forever. You would have to be a glitch yourself to get out and back into the real world

How was the testing- the glamor-visor took millions of tests, some results were too monstrous than expected. But most of the bugs were mitigated, even if the effects of the premium feature remain hostile if overused.

What happened to the infected test subjects- they were either turned into mindless vegetables or even misshapen glitch monsters. Thankfully most of them were returned to normal without prolonged use.

What happened to the few that stayed mutated- they were silenced or are still kept secret while a cure was being to be made. Though no cure has been discovered yet, so they still are locked in secret.

Story ideas

Where does the story take place- in the city of Veneer-point, a city where you can become the best version of yourself. A city of the future, where the digital and reality hold hands. Even if reality becomes blurry through digital lens.

How Glamor-incorporated integrated into city- their technology is the backbone of communication, expression, education, and entertainment. Every school has tablets and laptops instead of chalkboards. Every arcade game was replaced with video game visors. Even online dating is like stepping into a kiss without touching lips.

Has this over emersion in the digital world cause negative effects- well besides the occasional glitch mutations, it feels like a lot of people have become lazy. Like it got too easy to make content and new friends and really not appreciating anything. Making the vainer customers feel more like celebrities with some of the more superficial features of this tech based culture.

Have people stop connecting in real life- Few people still connect, but it seems like communication off screen is slowly dying with each update.

Are their any gods in this universe- based the ones based in religions, there are no gods that govern the universe's system. Though there is one being created with the big spark to help managed any out of control glitch.

Who is this being- their the data server, a being responsible for managing and disposing of the many glitches that get out of control in the system.

Are they the reason the fragments of the big spark are a myth- yeah and each time they get one they dispose of it by dismantling its energy to spread across the universe's system.

How powerful is it- its has powerful cosmic awareness of the universe's source codes and can change it's own coding to help it do it's job. This also helps it blend in with mortals to not be discovered. If it is, it would be force to rearrange their code to erase their memories or even kill them.

Characters

Mallory Heartwright

Age-15

Story role- She's the stories protagonist that uses her powers to fight for good while using it to help escape her problems.

Story ideas

Backstory- when she was five her mother died by a lab incident covered up by Glamor incorporate. Ever since than, her father had to take up the role of breadwinner of the house. Leaving her Nothing but her grandmother and the world of comics to keep her company

Personality- she's an introverted deadpan young girl who enjoys spending time to her self. She usually does her best to hide her true emotions ever since her father made her feel like being herself was too off for him. Though sometimes her true feelings gush out sometimes when she's either really anxious or overwhelmed with joy or sorrow.

Though despite that hard shell, she's shown to have a caring heart underneath. Rather it be helping or hanging out with her grandmother. Over even helping feed stray cats but usually giving them a saucer of milk. She's even shown to have a creativity and dramatic side when reading her comics or patrolling as glitch ranger.

But it can be hard sometimes to let that out while she puts on the mask. During than, she does a form of dissonance that forces her to act like a comic book hero. With all the over the top passion, overly dramatic reactions, and the humorous but awkward quips. Though when overwhelmed with her emotions the mask slips and has outbursts that makes her way less heroic.

Unnamed Foil

Age-16

Story role- He's the foil to Mallory's hero story and uses his powers for his own selfish purposes. Though he and Mallory both share the trauma not accepting themselves and escaping into their roles.

Personality-

Unnamed Antagonist

Age-
