

Dear Carpentries Community,

We have been developing a new lesson, *Title of Lesson (link to lesson here)*, in The Carpentries Incubator and believe that it is now ready to be taught more widely. We are keen to work with others to hold beta pilot workshops, in order to gather feedback from other Instructors that will help us improve the lesson further as we prepare for a full release. We're reaching out to the community to find people who would like to host a pilot workshop for this lesson.

Add some background here about the lesson, your motivation for creating it, where it has previously been taught, and anything else you think is relevant for the community to know.

Are you interested in teaching/hosting a pilot workshop of this material?

Here are a few more details to help you decide if the lesson is right for your audience:

** Add a summary of the prerequisites for the lesson: what should learners already know to be able to follow the lesson?*

** Add an estimate of the time required to teach the lesson? E.g. One full day, three half days, etc.*

** Add any relevant information here about the technical requirements of the lesson. Will hosts/learners need access to any specific technology to follow the lesson? Does the lesson have particularly large requirements e.g. for memory or compute capacity?*

** Beta pilot workshops require a minimum of two certified Carpentries Instructors, who should not have been significantly involved in the previous development of the lesson.*

Add any other information you think would be helpful and/or motivating for potential hosts, to encourage people to get involved with piloting your lesson.

If you would like to host a pilot of the lesson at your institute/organisation, please contact us *Add details of your preferred contact method(s) here.*
