ABSTRACT (10PT)

Type your abstract here (Times New Romant, Italic, 10 pt)

Abstracts are written in English with lengths of 150-200 words each and are tilted with times new roman 10 typed points with 1 spacing in 1 paragraph. Abstract is arranged with short sentences, clear, coherent, and systematic and can describe the research process from background, objective, method, research implementation, to the conclusion of research result

1. Introduction (*Heading 1*) (bold, 11 pt)

The introduction in this Galaksi journal begins by detailing the background of the research, presenting an overview of the current conditions or developments that motivated the need for this research. For example, it may explain the technological developments and trends related to the research problem that became the main impetus for conducting the research. In this context, the author explains the relevance and urgency of the research topic. Next, the research problem is clearly identified, highlighting the aspects that are the main focus of the research. The author briefly and clearly explains why this problem is important to solve or investigate further, providing a foundation for the research objectives that will be further elaborated on in terms of research implications.

2. Literatur Review (*Heading 1*) (bold, 11 pt)

In the literature review section, the author compiles and details previous research that is relevant to the research topic. This process helps to show the Research GAP that the author wants to address through the research. previous research results that are directly related to your research topic. Discuss the main findings and methodologies used by previous researchers. The literature review should include an analysis of previous research to identify knowledge gaps or unsolved problems. Explain why your research is important to fill these gaps.

3. Research Method (*Heading 1*) (bold, 11 pt)

This section contains a complete and detailed description of the research steps. In describing the research steps, it can be shown in the form of a research flow chart or a complete and detailed research framework including algorithms, rules, modeling, design and others related to system design aspects. In this section also explains the data collection techniques and data analysis of the research conducted, an explanation of the research method.

Arabic numerals should be used to label every table. There should be a caption for each table. It is recommended to position headings above tables in the left justified format. In order to differentiate the column headings from the table body, it is recommended to utilize only horizontal lines within the table, specifically above and below the table. It is required that tables be integrated into the text rather than being provided as distinct files. An example that the authors might find beneficial is provided below.

Table 1. An example table of decision criteria.

Criteria (C)	Definition	Value Scale
Criteria1	This a criteria number 1	3
Criteria2	This a criteria number 1	5
Criteria3	This a criteria number 1	7

Each figure should be clear and unblurred in JPEG or PNG format. Sample images are provided below:

Fig. 1. Forecasting Trend Chart

All equations are made in equation format not screenshot images, and there is numbering on the right side of the equation, as follows:

$$A = \pi r^2$$

4. Result and Discussions

Results and Discussion is a section that contains all scientific findings obtained as research data. This section is expected to provide a scientific explanation that can logically explain the reason for obtaining those results that are clearly described, complete, detailed, integrated, systematic, and continuous.

The discussion of the research results obtained can be presented in the form of theoretical description, both qualitatively and quantitatively. In practice, this section can be used to compare the results of the research obtained in the current research on the results of the research reported by previous researchers referred to in this study. Scientifically, the results of research obtained in the study may be new findings or improvements, affirmations, or rejection of a scientific phenomenon from previous researchers.

5. Conclusion

The conclusion section is a short paragraph that summarizes the main findings, implications of the research and provides suggestions for future research.

Acknowledgment

The Acknowledgement section is optional, in that it is presented to express the author's gratitude to individuals or institutions or parties that provided support, guidance, or resources during the research. The author recognizes these valuable contributions, ranging from academic guidance, financial support, to technical assistance. Acknowledgement reflects the author's gratitude towards collaborators, mentors, and others who helped make this research a success.

References

Bibliography of at least 15 written based on APA (American Psychological Association) style. Use Reference manager (end note, mendeley, zetero and the like) to facilitate editing and review. Sources referenced at least 80% of the national and/or international journals of the last 5 years.
