

Highlighted = Seeds I already has/need to be germinated
Highlighted = I have the seeds, planting it is the question (low priority)
Highlighted = Probably don't need, keep on list as a backup
Highlighted = Still need to get
Highlighted = planted 1/15/24

Trees (woody, >6ft):

Eastern Redbud (*cercis canadensis*)

Large, plant in shade under white oak

Flowering dogwood (*benthamidia florida*)

Large, plant towards front of garden if there is room

I have a random dogwood seedling, MIGHT be flowering sp.? Might be something else entirely, I say plant it and see what happens; worst case is we remove it and put a flowering dogwood in its place

Sweetshrub (*calycanthus floridus*)

Decent sized shrub, cool red flowers for some variety and pretty easy to grow

Could replace one or both of the dogwoods

Needs to be germinated and grown as a seedling before planting

Wafer Ash (*ptelea trifoliata*)

Likes warm, wet, shitty soil

Needs to be germinated and grown as a seedling before planting

Shrubs (woody, <6ft):

Beautyberry (*callicarpa americana*)

Edible, edge of garden

Buy as a seedling if possible

Blackhaw (*viburnum nudum*)

Edge of garden probably

Tall wildflowers (>2 ft):

New York Ironweed (*vernonia novaboracensis*)

Likes full sun and moist soil (water frequently)

Sow densely; low germination success)

Common Milkweed (*Asclepias syriaca*)

Can tolerate full sun to shade

Sow seeds in late fall/winter and LIGHTLY cover in dirt

Joe pyeweed (*eutrochium* sp.)

Likes part sun

Rattlesnake master (*eryngium yuccifolium*)

Full sun or partial shade

Aaron's Rod (*thermopsis villosa*)

Full sun/part shade, native to mtns idk how it'll grow in piedmont

Bearded beggarticks (*bidens aristosa*)

Part shade

I have 0 experience with this plant but it looks cool

Foxglove Beardtongue (*penstemon digitalis*)(also have *P. smallii*)

Sow outside in fall/winter, don't cover seeds

Full sun

I've never worked with this one before

Frost Aster (*symphyotrichum pilosum*)

Mild sun/light shade (don't burn it)

Medium wildflowers (1-2 ft):

Orange(?) Coneflower (*rudbeckia fulgida*)(also have Purple Coneflower *E. purpurea*)

Can tolerate any amount of light but likes a good amount of sun

Sow outdoors in late winter, needs well-drained soil

Goldenrod (*solidago* sp.(*caesia* maybe))

Good for native flies (not annoying ones)(might get taller than 3ft depending on sp.)

Ragwort (*packera* sp.)

Honeybee haven, part sun

Dwarf Iris (*iris verna*)

Part sun-shade, good for moths

Star Tickseed (*coreopsis pubescens*)

Plant on outer edge of garden and prepare to have way too much of it

American Ginseng (*panax quinquefolius*)

Shade

Jack-in-the-pulpit (*arisaema triphyllum*)

Shade/part sun

Hoary Mountain Mint (*lmao*)(*pycnanthemum incanum*)

Native to mountains but smells really good in the spring and summer

Start indoors in late winter, transplant outside in ~4 months

Full sun/part shade

Eastern Bluestar (*Amsonia tabernaemontana*)

Sow outdoors in fall or cold-stratify for 2-3 days, slow to germinate

Likes moist sun and partial shade

Short wildflowers (<1 ft):

Red columbine (*aquilegia canadensis*)

Really good for hummingbirds, make sure its not too close to anything else

Shade

Trumpet creeper (*campsis radicans*)

VINE with beautiful orange flowers, needs a tree to grow on

Sun/part shade (would be good on the oak tree)

Link to iNat Project (view all the flowers and more info on each one)(most helpful resource):

<https://www.inaturalist.org/lists/4434405-Mills-Native-Pollinator-Garden>

Where to buy trees:

<https://plants.newgarden.com/12190005> (greensboro)

<https://www.habitatassessment.com/plant-availability> (Davidson county)

IF you buy anything from Lowe's, make sure the latin name matches the one in this document

Sometimes they have the tree/shrub species
