ëInstructions for using a shared account:

1. Follow the link given to you upon purchase to obtain account data.

2. Launch the Steam application for PC.

   If your account is active - click on "Steam" in the upper left corner and select "Sign in with another account" and then "Add account"

   If you don't have Steam installed, you can download it from the [official website](#)

3. Enter the username and password given to you, be sure to click the "Remember me" checkbox.

   When a confirmation code is requested, click "Get code" on the login and password delivery page.

4. Once logged into account, select the game and put it on download. After the download is complete, launch the game, and after the main menu loads, immediately exit the game.

   If the download or launch button is grayed out, click the arrow to the right of the button and select "This PC."

   Due to the DRM protection built into the game, the game has a limit on the number of activations from different devices per day, so the first launch may not be immediate and you may have to wait several hours for activation before the restriction is lifted. After successful activation, you will be able to launch the game at any time and without delays.

5. Launch Ubisoft Connect that was installed with the game, again follow the link given to you upon purchase, click on the "Ubisoft Connect" tab to obtain the relevant account information, and enter it into Ubisoft Connect. Be sure to click the "Remember me" and "This device is trusted" checkboxes.

   You can also get a confirmation code for Ubisoft Connect by clicking "Get code" on the page for issuing your login and password.

   Game activation is complete!

Starting the game:

Before each launch of the game, make sure that you are logged into Steam and Ubisoft Connect in offline modes.

To switch Steam to offline mode, simply click on "Steam" in the upper left corner and select "Go Offline."

To switch Ubisoft Connect, you can choose from:

— **Or turn off the Internet manually <u>before</u> launching Ubisoft Connect.** The Internet can be turned back on after successfully logging into your Ubisoft Connect account in offline mode.

— **Or use the bat script provided on the login and password page** to automatically turn off the Internet. The Internet will also turn on automatically after launching the game or closing Ubisoft Connect.

If Ubisoft Connect asks you to enter your account details when the internet is disconnected, enter them again.

Done, you can play!

You can also switch to your personal account to run your other games, this will not affect the performance of this game in any way. To do this, simply click on "Steam" in the upper left corner and select "Change Account". Do not use the "Sign Out" button - this will result in a complete logout and a repeated code request.

When you return back to your current account, remember to switch to offline mode again without installing the game update, if there is one. If after switching to offline mode instead of the "Play" button you still have the "Update" button - restart Steam.

Follow the recommendations below so that the game continues to work normally in offline:

— Disable Windows updates
— Do not log into your account online unless necessary
— Do not interfere with PC components (overclocking, replacing, as well as simply disconnecting and connecting the same components)
— Do not interfere with game files, Steam and Ubisoft Connect (installing patches, add-ons, updates, reinstalling Steam, Ubisoft Connect and game)

Failure to comply with these recommendations may lead to temporary loss of access to the game, since to restore access you will need to re-activate online, with the possibility of waiting again for the restrictions to be lifted, as during the first activation.
