ÓRATERV

Műveltségi terület: Élő idegen nyelv

Tantárgy: Angol

Osztály: 11, 12 évfolyam

Az óra témája: A madarak és fák napja, a globális felmelegedés hatásai az állat és növényvilágra

Az óra cél- és feladatrendszere: a fejlesztendő attitűd, készségek, képességek: Az óra célja a szókincs bővítése, beszédkésség fejlesztése és az önbizalom építés a beszédkéssséggel kapcsolatban. Az eddig tanult nyelvtani rendszerek szakszerű és helyes használata, a helyesírás fejlesztése. Továbbá új ismeretek szerzése a madarak és fák napjának lényegéről, a negatív környezeti hatások és változások megismerése és a környezetkárosodás megállításának, minden napos csökkentésének lehetősége.

A tanítandó ismeretek (fogalmak, szabályok stb.) és az elérendő fejlesztési szint, tudásszint: A szóbeli érettségi több tételében is felmerülő témák és kifejezések megismerése. Az állat és növényvilággal kapcsolatos kifejezések megismerése és a globálisfelmelegedés tételének feldolgozása.

Az óra didaktikai feladatai: Ismeretbővítés (szókincs) és gyakorlás (szókincs, olvasásértés, hallásértés és beszédkészség)

Tantárgyi kapcsolatok: Angol nyelven tartott előadás az angol érettségi vizsga szóbeli tételei mellett természettudományi tárgyak anyagát is lefedi. Földrajz, biológia.

Exercises
The Day of Birds and Trees

1. **Fill in the gaps with the provided phrases in the gray.**

surprise crown research stooping scientifically scientists measured

The Common Swift has officially lost its_____ as the fastest-flying animal in the sky. So who took the title? The Peregrine Falcon? Perhaps he Grey-headed Albatross? None of the above. The answer might _____you, because according to the latest _____, the fastest flier in the animal kingdom isn't a bird at all. It's a bat. The Peregrine Falcon is indisputably the fastest animal in the sky. It has been _____at speeds above 83.3 m/s (186 mph), but only when_____, or diving. So for many years, it was commonly held by _____that the fastest-flying bird in level flight was the White-throated Needletail (formerly known as the Spine-tailed Swift), which could supposedly reach speeds of up to 47m/s (105 mph). That number, however, had never been _____proven.

2. **Facts about birds and threes:**

Decide which statement is True or False, write **T** for True and **F** for False.
Provide verbal explanation for each answer.

1. Ravens are great at mimicking human speech and sounds.
2. Cardinals like to cover themselves in ants.
3. Owls devour their larger prey whole.
4. In ancient Greece, falcons delivered the results of the Olympic games.
5. Parrots can learn to say hundreds of words.
6. The unique black and white coloring of penguins works as camoflage.
7. Trees renew our air supply by absorbing oxygen and producing carbon dioxide.
8. Trees lower air temperature by evaporating water in their leaves.
9. The world's tallest tree is a coast redwood in California, measuring more than 360feet or 110m.
10. Tree roots encourage soil and prevent erosion.

3. **Read the passage and answer the following questions. Write your answers on the dotted lines below.**

Forests occupy nearly a third of Earth's land surface, providing humans and countless other species with a wide range of benefits and services — from ecological functions such as water and air purification to goods such as lumber and paper.

But according to a recent report released by the United Nations, climate change is expected to worsen over the next century as greenhouse gas emissions continue to increase, a trend that experts say will have consequences for the health of forests worldwide. At NC State's College of Natural Resources, Robert Scheller is examining the impacts of climate change and human activities on long-term landscape health and developing models to forecast landscape change to inform policy and management decisions.

"Climate change can create new habitats for tree species and make existing habitats unsuitable. And like any other living thing, trees go where they can survive," Scheller said. "This process is already underway."

In response to climate change, some tree species will shift their ranges and migrate into landscapes in which they don't typically grow. Some tree species are migrating uphill and northward as temperatures increase, while other species are migrating downhill and westward as changing precipitation patterns create drier conditions. Palmetto trees, for example, could become more common throughout North Carolina in the next 50 or 60 years as they migrate from nearby states like Georgia and Florida, according to Scheller.

1. What could be the best title for the passage?

   _____

2. Becaulse of climate change some tree species will…

   _____

3. Why some trees decide to migrate northward?

   _____

4. What purpose trees serve?

   _____

5. Who commissioned the research that Robert Scheller conducted?

   _____

Exercises & Answers
The Day of Birds and Trees

1. **Fill in the gaps with the provided phrases in the gray.**

surprise	crown	research	stooping	scientifically	scientists	measured

The Common Swift has officially lost its crown as the fastest-flying animal in the sky. So who took the title? The Peregrine Falcon? Perhaps the Grey-headed Albatross? None of the above. The answer might surprise you, because according to the latest research, the fastest flier in the animal kingdom isn't a bird at all. It's a bat. The Peregrine Falcon is indisputably the fastest animal in the sky. It has been measured at speeds above 83.3 m/s (186 mph), but only when stooping, or diving. So for many years, it was commonly held by scientists that the fastest-flying bird in level flight was the White-throated Needletail (formerly known as the Spine-tailed Swift), which could supposedly reach speeds of up to 47m/s (105 mph). That number, however, had never been scientifically proven.

2.Facts about birds and threes:

Decide which statement is True or False, write **T** for True and **F** for False.
Provide verbal explanation for each answer.

1. Ravens are great at mimicking human speech and sounds**. T**
2. Cardinals like to cover themselves in ants. **T**

   shift their ranges and migrate into landscapes in which they don't typically grow.
3. Why some trees decide to migrate northward?
   becaulse of increasing temperatures
4. What purpose trees serve?
   They provide humans and countless other species with a wide range of benefits and services — from ecological functions such as water and air purification to goods such as lumber and paper.
5. Who commissioned the research that Robert Scheller conducted?
   The United Nations

PowerPoint diák:

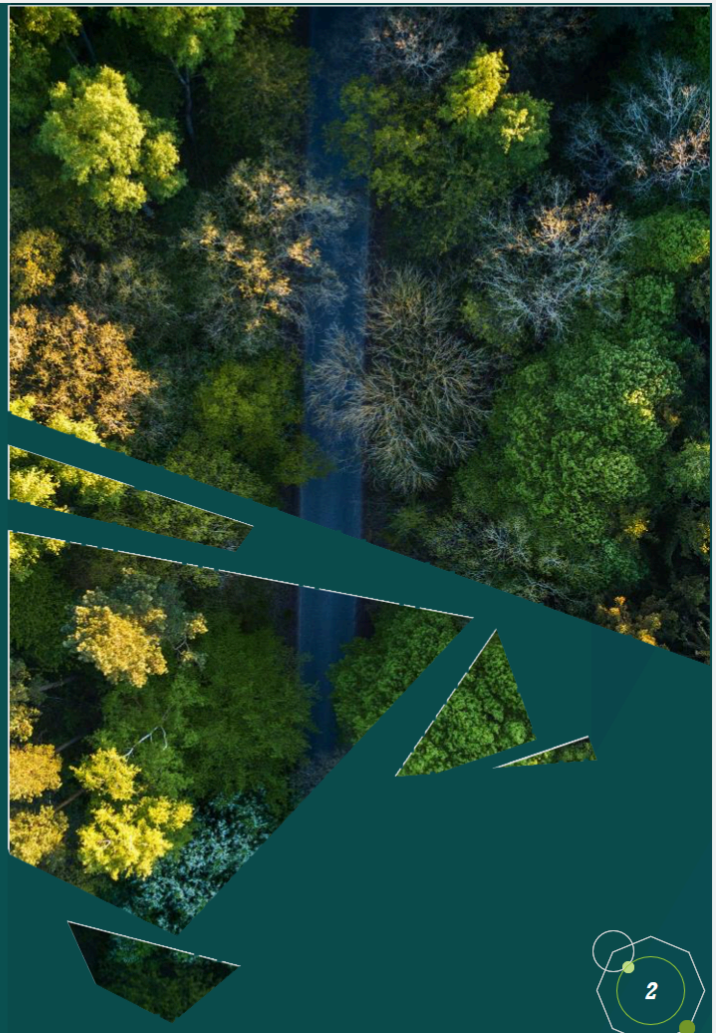

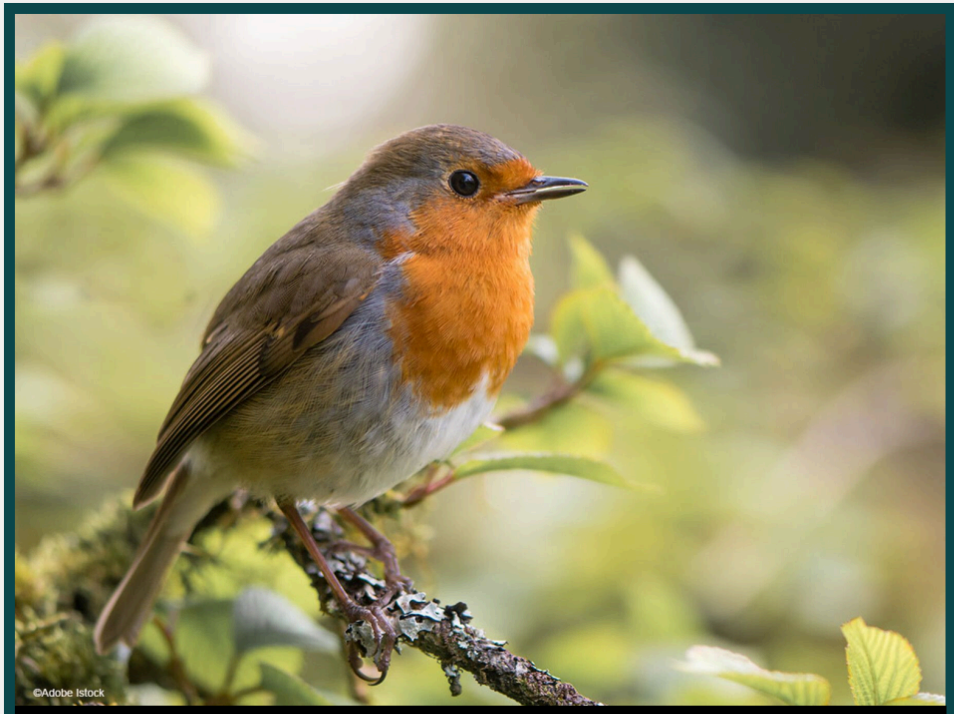

Az óra menete

History

Fun Facts

Enviroment

Europian Robin

Birds day is a sister holiday to the Earth day.

Bird Day was established by Charles Almanzo Babcock, the Oil City superintendent of schools in 1894.

It was the first holiday in the United States dedicated to the celebration of birds.

On May 19. 1902. in Paris, European states signed a convention to protect birds useful in agriculture.

In 1902, the ornithologist István Chernel organized the Day of Birds and Trees for the first time in Hungary, which was regulated by Act I of 1906.

Albert Apponyi, Minister of Religion and Public Education, prescribed in a circular decree that the teacher should dedicate one day a year in folk high schools to acquaint students with the importance of useful birds and their protection.

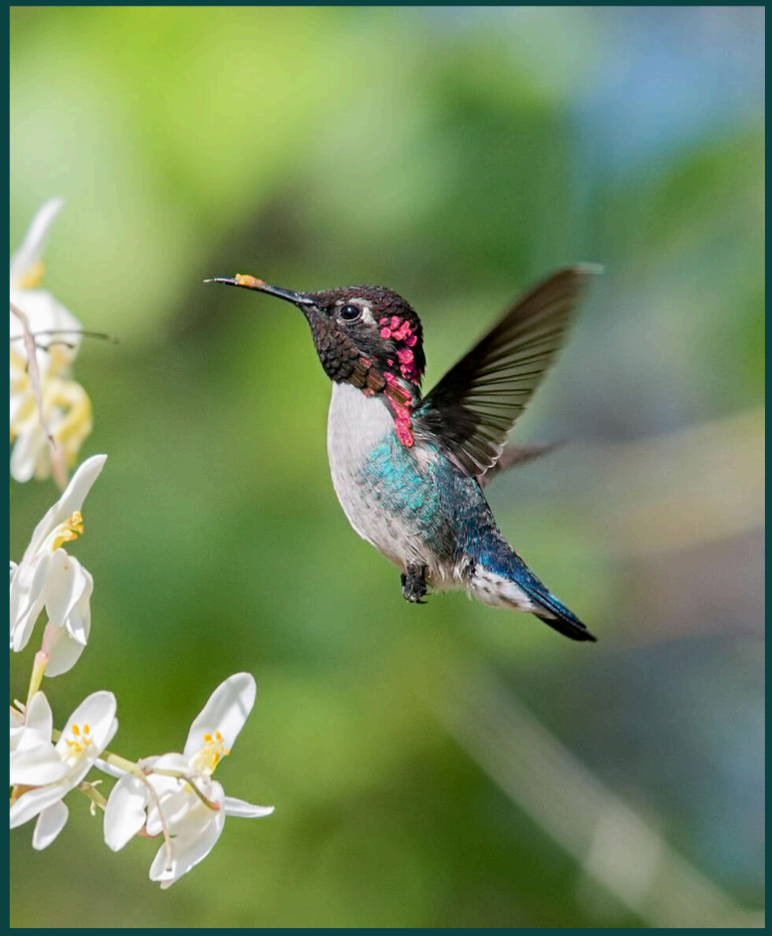

The best-known bustard is the **Great bustard (Otis tarda)**, largest European land bird.

The male weighing as much as 14 kg and having a 120-cm length and a 240-cm wingspread.

It is found in grainfields and open steppes from central and southern Europe to Central Asia and and Manchuria.

Europe’s biggest bird

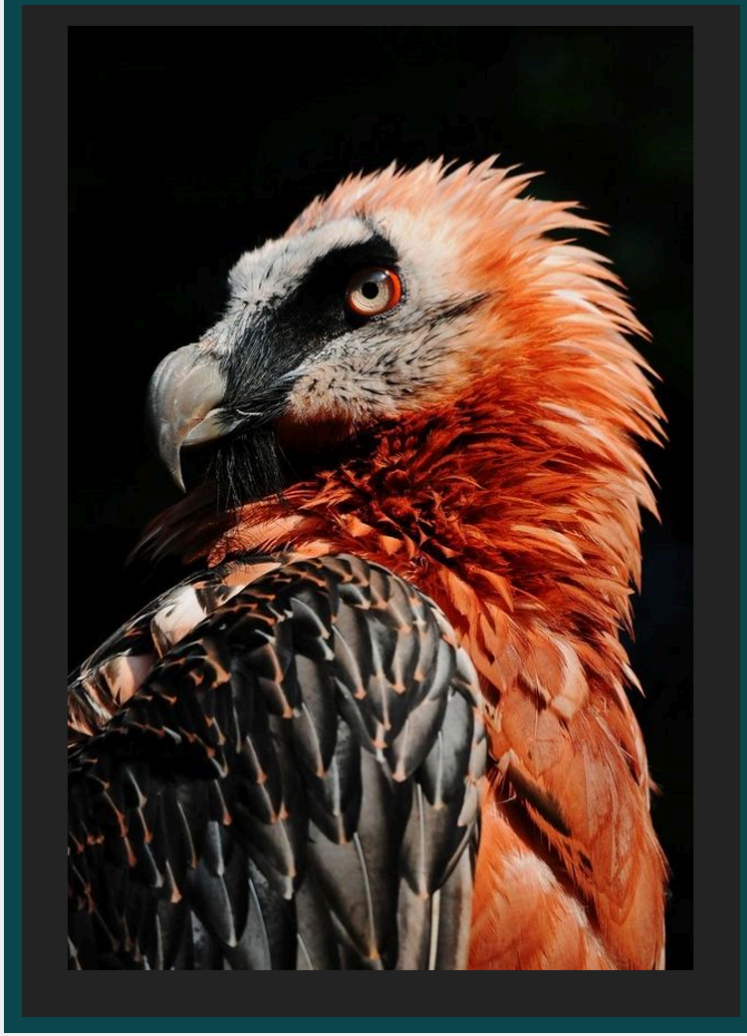

The words smallest bird (Mellisuga helenae)

The Bee Hummingbird

- Males measure 57mm in total length, half of which is taken up by the bill and tail, and weigh 1.6g.
- Females are slightly larger.

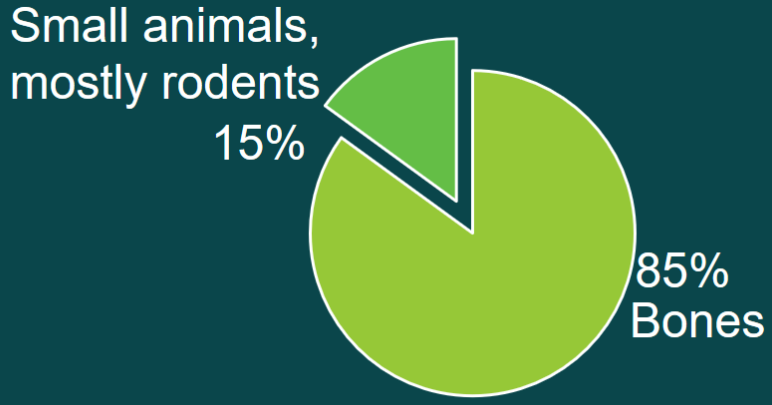

- This is believed to be the lowest weight limit for any warm blooded animal.

Bone eaters

The Bearded Vulture is Europe's rarest vulture.

Wingspan: 2.5 -2.85m
Weight:4.5 -7.1kg

Birds eyes

- One of the coolest things about bird retinas is that they have four different types of cone cells, instead of only 3 as in humans. That fourth cone is sensitive to ultraviolet wavelengths of light, which humans can’t see.

- Of all animals, birds have the largest eyes relative to their body size.

- The Common Ostrich has the largest eye of any land animal, an ostrich eye is 5 times bigger than a human eye and is even bigger than an elephant’s eye. Each of this bird’s eyes is larger than its brain!

Aspen tree

The largest organism in the world, according to mass.

Colonies of clones can grow up to **8km** long.

The largest such colony is Pando, in the Fishlake National Forest in Utah.

Amazon Rainforest

The Amazon rainforest is a tropical rainforest located in South America.

It's the home to:

- 40,000 plant species,
- 1,300 bird species,
- 2,200 species of fishes,
- 427 types of mammals,
- 380 reptile species,
- 2.5 million different types of insects.

Area : 5.5 million km²

Magnificent Hungarian Oak Voted European Tree Of The Year With Huge Lead

A famous oak tree standing in the Hungarian town of Bátaszék in Tolna county has been chosen European Tree of the Year in 2016 in a vote that saw close to 230 000 Internet users pick their favourite from a 15-tree field, until 29 February of 2017.

Fun facts about trees

1. **Trees are the longest living organisms on Earth, and never die of old age.**

California holds the record for the oldest living trees. Some of the state's bristlecone pines and giant sequoias are 4,000-5,000 years old. Methuselah, an estimated 4,852-year-old ancient Bristlecone Pine, is one of the oldest living trees in the world.

Fun facts about trees

2. Some trees have been to the moon.

“Moon trees" were grown from seeds taken to the moon during the Apollo 14 mission in early 1971. NASA and the US Forest Service wanted to see if the moon’s orbit caused the seeds to grow differently back on earth. These trees were donated to state forestry services in 1975 and 1976.

Fun facts about trees

3. Trees block noise by reducing sound waves.

They reduce noise through a phenomenon called sound attenuation, which is the reduction of sound intensity. Leaves, twigs, and branches on trees, shrubs, and herbaceous growth absorb and deflect sound waves to mask unwanted noise.

Bird endangering factors

Klimat change

De forestation

Tourism

Pollution

How climate change is affecting birds

- Egg laying is occurring earlier
- Migration times are shifting
- Bird behaviour and their environment are becoming mismatched
- Distributions are changing
- Ecological communities are disrupted
- Extinction risks are on the rise

The Impacts Climate Change has on Forests

- Climate change is creating warmer temperatures, deeper droughts and drier vegetation.

- These conditions will persist in the coming decades and lead to an increase in the extent, intensity and frequency of wildfires, especially in the western US and Australia.

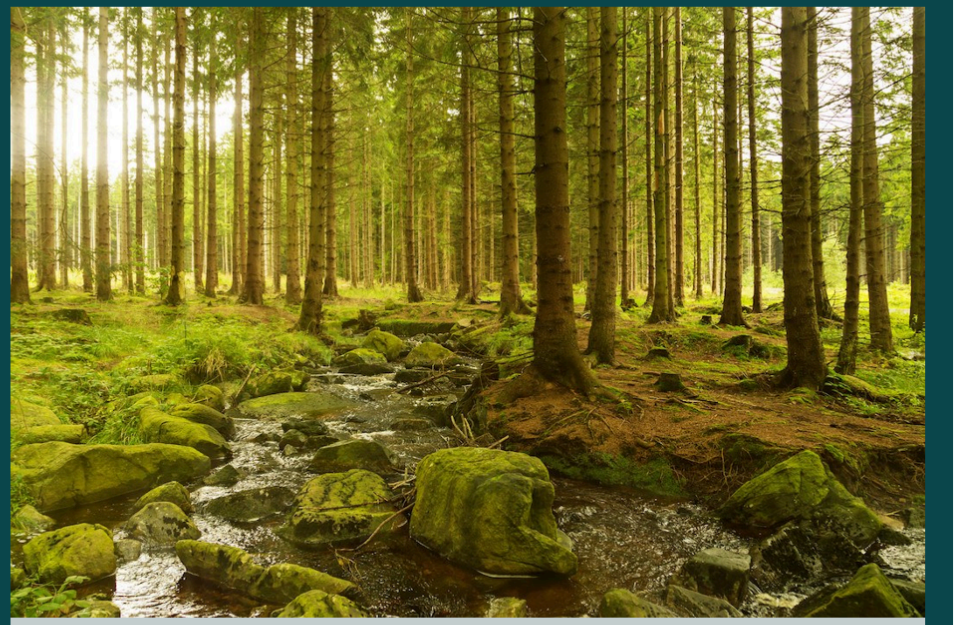

The Impacts Climate Change has on Forests

In recent years, polluting companies worldwide have announced plans to utilize forest carbon offset projects to achieve net-zero greenhouse gas emissions by 2050 as investors demand sustainable practices and governments look to promote renewable energy technologies.

Trees help reduce the effects of climate change.

A mature tree can absorb more than 48 pounds of carbon dioxide each year, removing and storing the carbon while releasing the oxygen back into the air. In Chicago, trees remove more than 18,000 tons of air pollution each year.

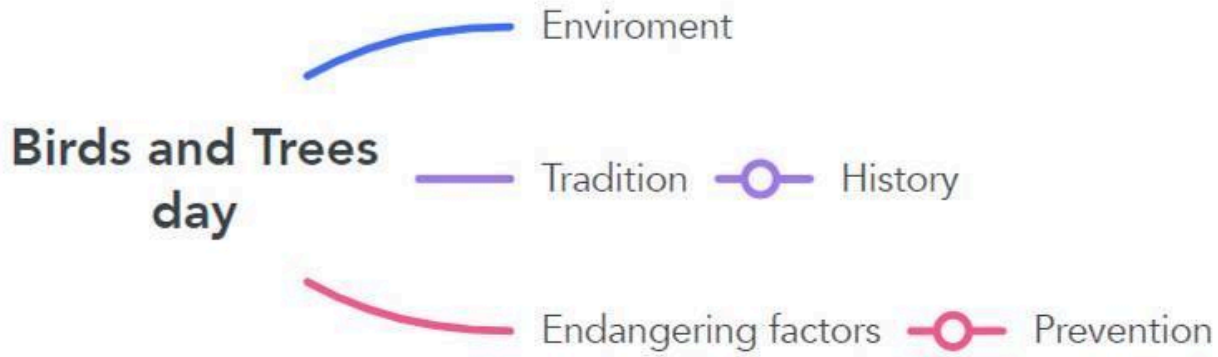

Tree rings can predict climate change.

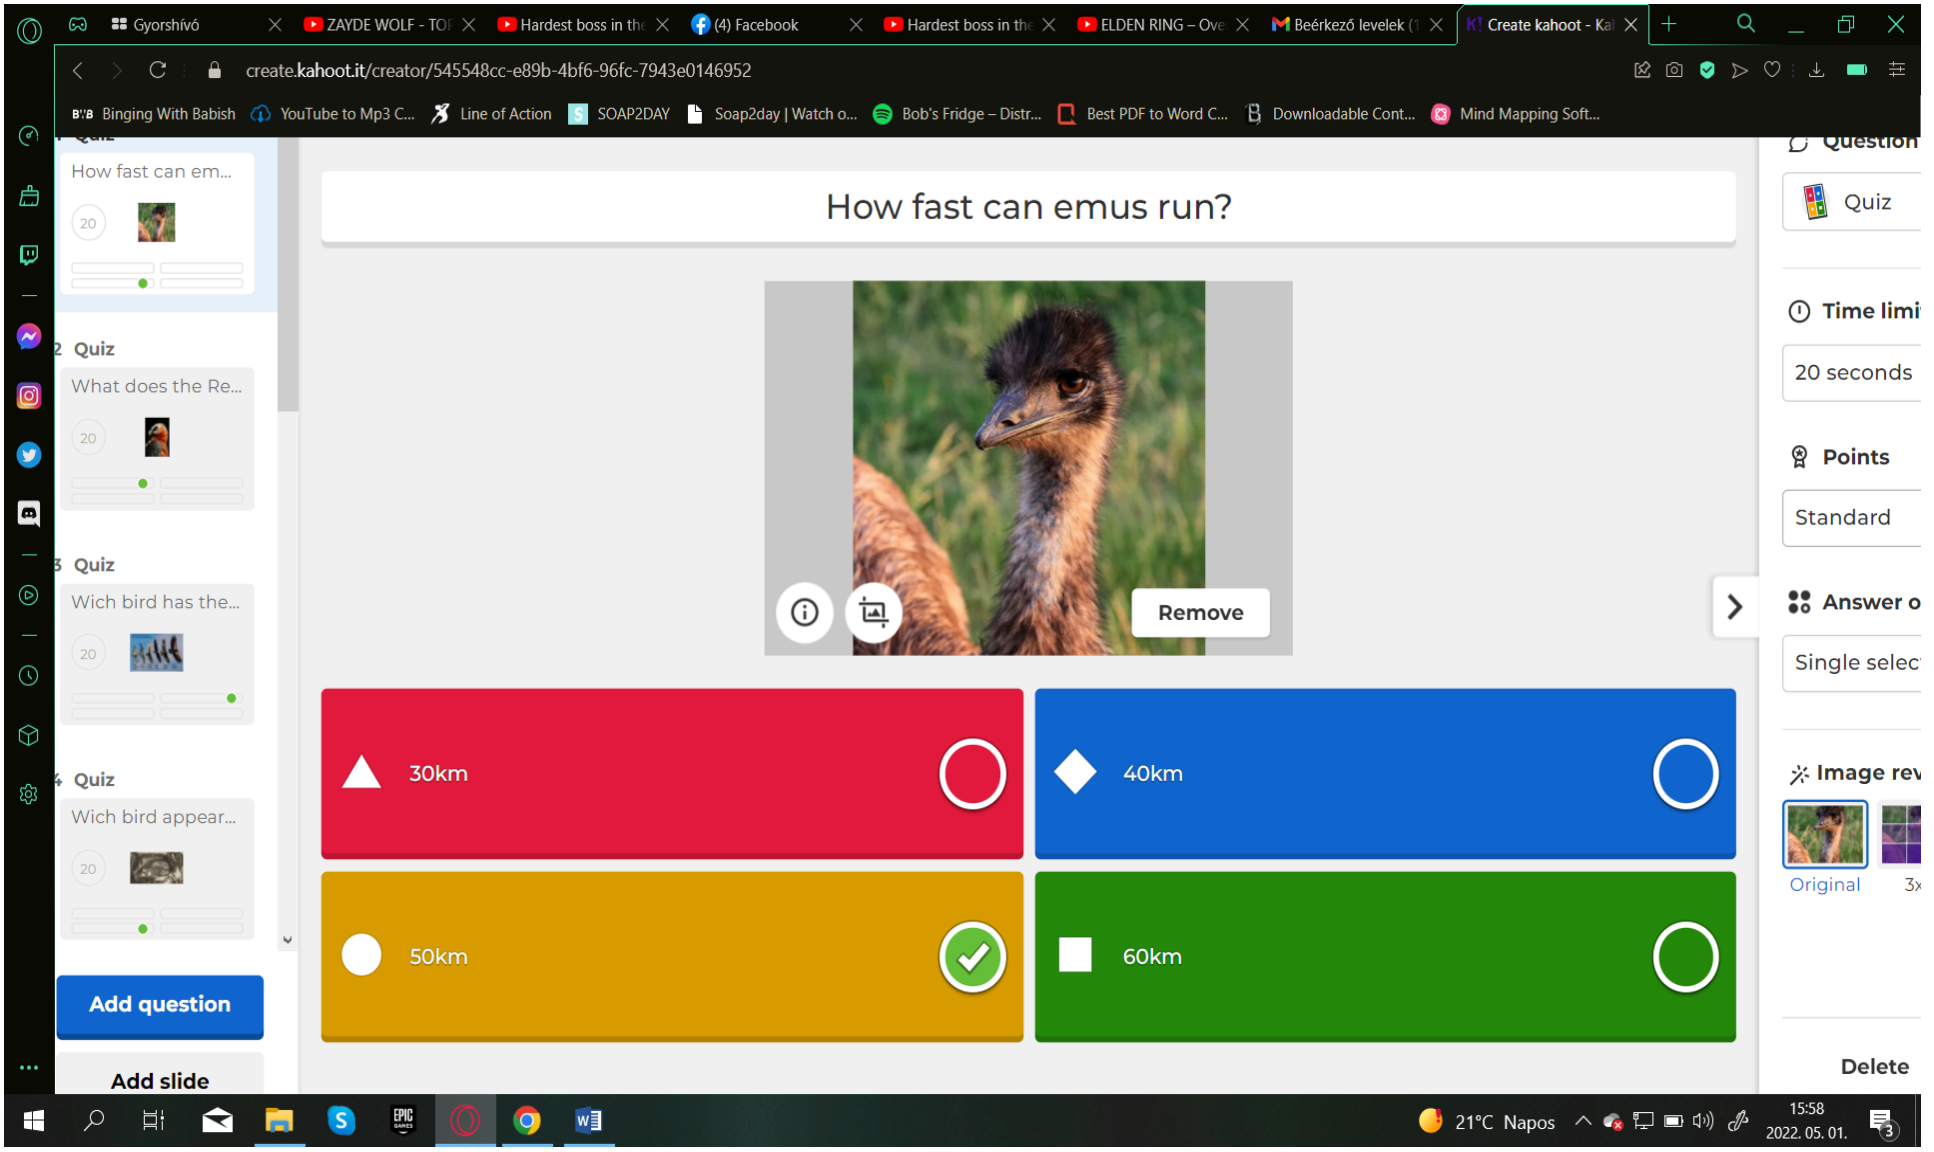

Dating a tree by studying its rings is called Dendrochronology. However, a tree's rings don't only reveal its age, they can also indicate the occurrence of natural disasters such as a volcanic eruption or a drought event.

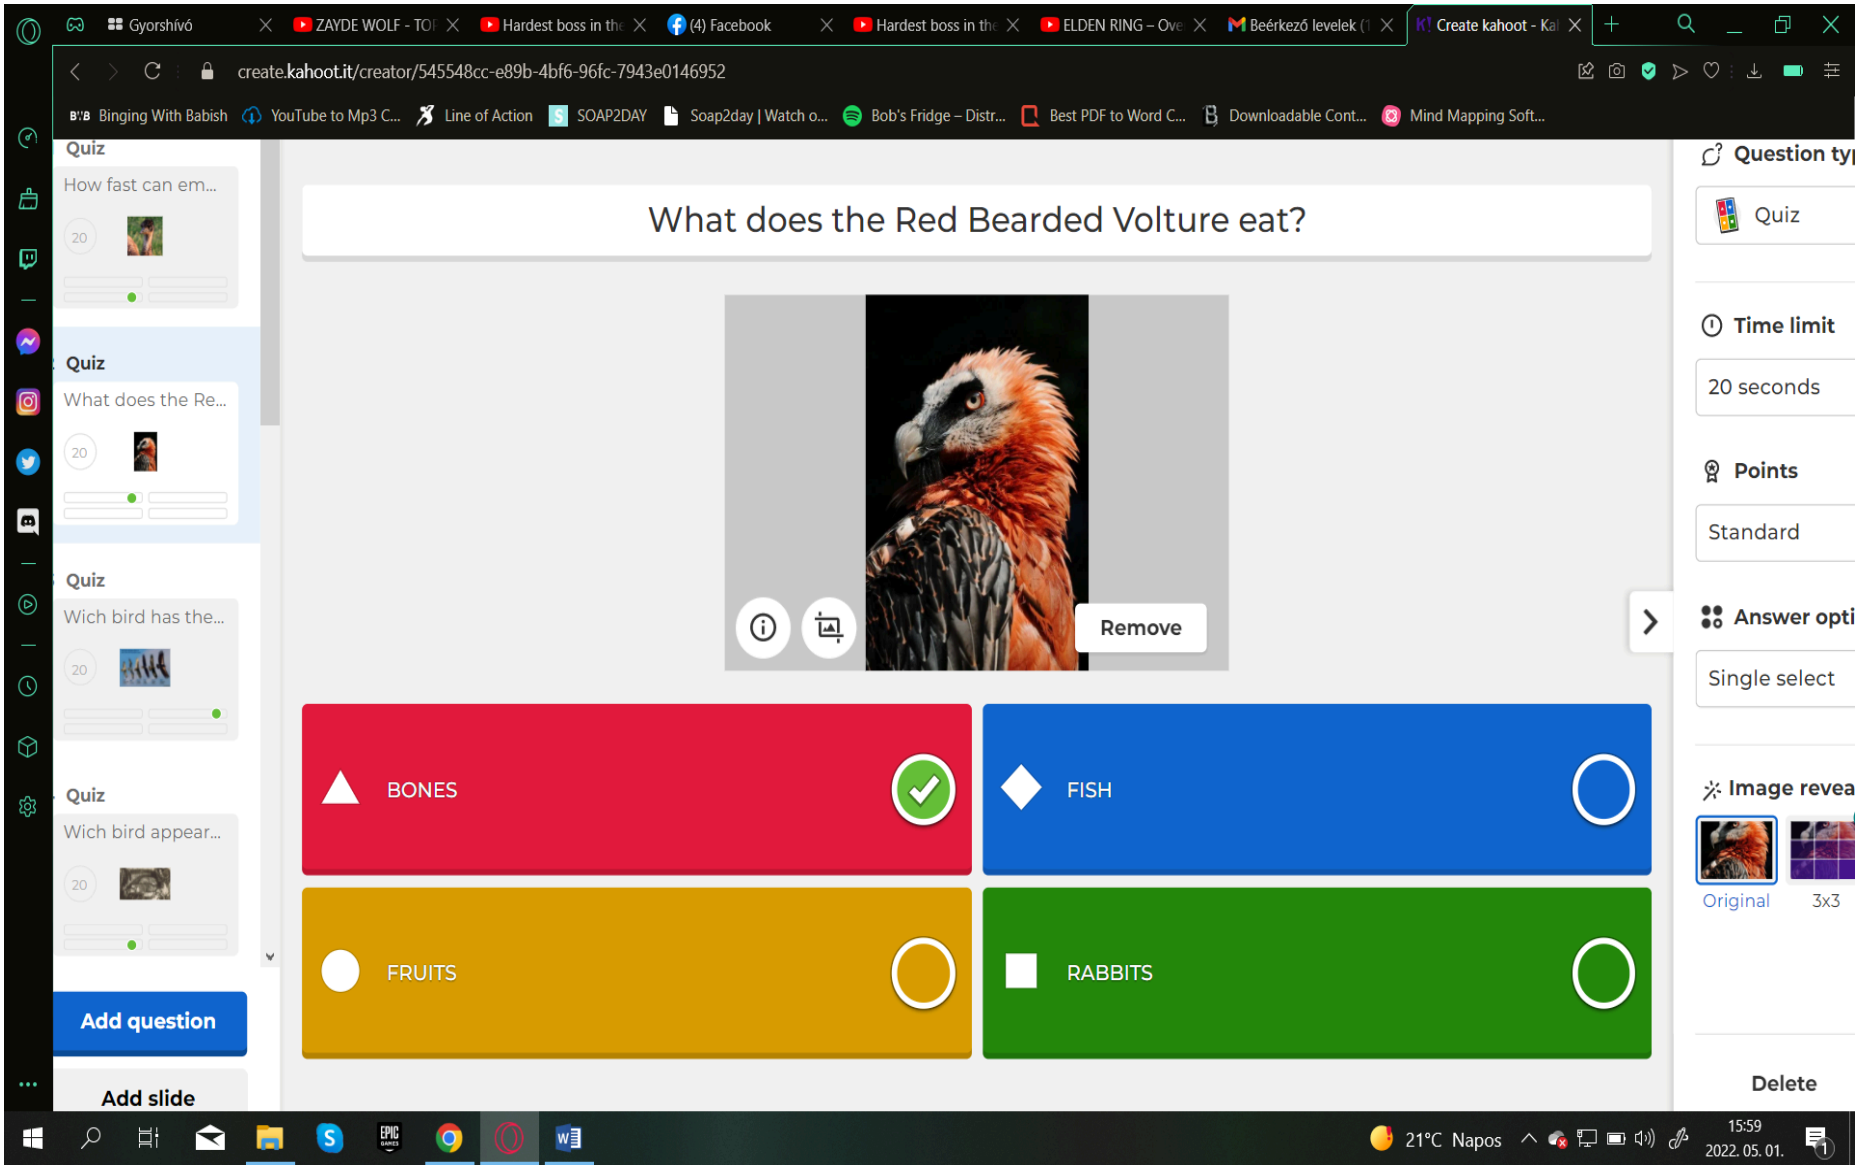

In the years of good growth, characterized by a healthy supply of resources, the ring is thick. It is thin when resources are scarce in the ecosystem.

Thank you for your attention!
