

Requirements for a JSON-based SessionDescription format

Example: <http://www.gitpaste.com/paste/1423/>

- Programming friendly (silviapfeiffer1@gmail.com)
 - An interface to change that offer before setLocalDescription.
 - “Help programmers achieve their goals more easily”
 - Not too complicated
 - add/remove tracks
 - change the offered resolution
 - negotiation between browsers does not need to be exposed to JS developers
 - they could have a more abstract interface, even if the browser uses SDP
- Low-level control (roman@telurix.com)
 - send codecs
 - send resolution
 - easy to understand and program
 - switch send codecs without changing transport parameters
- Update messages (ibc@aliax.net)
 - Updates that don't re-send the whole description
 - minimal start
 - enable/disable video
- Does not include SDP (erik@hookflash.com)
