

Renal Transplant Contrast Administration – updated 2/6/2022

1. We no longer need to obtain approval from Nephrology or Renal Transplant Surgery to administer contrast to renal transplant patients.
2. If the ordering physician believes a contrast-enhanced CT is indicated, we will perform the study.
3. The Technologists will notify the Nephrology and / or Transplant Surgery team that the scan has been performed via an Epic Note
4. Management of patients with renal insufficiency (or failure) will not change, regardless of transplant status.
