Introduction:

I have whiskers but I am not a mouse, I have great night-vision but I am not an owl, I have good hearing but I am not a bat, who am I? A cat!

Cat facts.

# Chapter 1: the basics.

Cats use their tails to balance on fences and other narrow spaces. Also cats' whiskers are longer than their body. It's because if they try to hide in a box or other places that are tight, whiskers help them find out if they can or cannot get in those tight spaces. (fun fact: cats have whiskers on the back of their front paws.)most cats are *nearsighted*, but they have better night-vision,smell and hearing than humans do. Cats don't like water that much. Siberian cats for example don't like water because it's cold in siberia so if they get wet the cold weather will make them sick. It's a fear they were born with.

CHAPTER 2: Diet

Cats eat meat, cat food and (sometimes) fish.
Wild cats eat a much bigger variety of food.
For example, the sand cat eats snakes that
It comes across in the desert. There is also
A cat
that swims to
get its prey,
the wild

Fishing cat.
Or that is how it's known for how it hunts its prey.

The fishing cat,
Dives into a river with fish in it waiting for
One to pass by and then it snatches the fish.
And finally, the bobcat its diet consists of
Lizards,rodents, and

## CHAPTER 3:WILD CATS.

There’s a lot of wild cats, such as leopards,tigers,jaguars (the wild cat NOT the football team.)and more! The Most interesting of the cats, The Fishing cat ,dives into the river to get food. Their diet consists of fish, small mammals and birds. Next,the sand cat is small but sure is adaptable to hot weather and cold weather. Because its fur is so thick it protects it from the harsh sun, and keeps it warm at night. It has fur on its paws too, because if it didn’t it would burn its feet on the hot sand of the desert. Finally the Lynx, this wild cat lives mostly in cold areas, so it has thick fur to protect itself from the cold winter weather, and even colder winter nights.Some house cats have some of those traits,maybe they don’t have webbed paws like the fishing cat, but they might like water, they might not live in the desert and have skin that they use for camouflage in the sand but they have thick fur

They might not have the big paws that the lynx have but they might have a lot of fur too!

## Conclusion

**Cats are very interesting animals. There are many types of Cat's that I have not covered in this book. I still don't know everything about cats myself, stay tuned for Cat book 2.**

# Glossary

| | |
|---|---|
| **Consist:** | **What something is made of/what something has in it.** |
| **Nearsighted:** | **Being able to see closer things better than far away things** |
| **resist:** | **Not wanting to do something.** |
| **adapt:** | **Being able to adjust to the surroundings.** |
| **snatch:** | **Fast grab with a lot of force** |
