

## **Kigali Hacks Prompts**

**IMPORTANT:** Your project MUST follow at least one of the prompts below

### **Local Impact**

Help solve an issue prevalent in your local community.

Examples:

- Local carpooling app
- An app that connects teachers with/ students

### **Education**

How can technology be used to incentivize or improve learning?

The school will make you average because everyone is getting the same knowledge as you are so don't expect to be an expert while going to school.

Knowledge is every way to learn how to get it.

Examples:

- Pop-up book app
- Textbook summarizer
- AI teacher

### **Culture**

How can technology be used to bridge the gap between cultures (i.e. language, art, culture)?

Examples:

- sign language reader/teacher
- a webpage that offers information and cultural highlights of different regions
- Culture Commonality App

### **Self Improvement**

How can you help improve yourself or help others improve themselves through programming?

Examples:

- Habit tracker
- Exercise app
- Time management tool

### **Mental Health**

How can we use technology to resolve an issue related to mental health (i.e. stress, anxiety, depression, psychotic tendencies, ADHD, etc.)?

Examples:

- Mindfulness app
- Website that provides students with mental health workshops and resources
- Quiz that teaches people of different mental health issues

\*Projects don't necessarily have to (and shouldn't) resemble the examples – make your idea your own! 🤔
