

Marrakesh

nMk or MkMk

- Marrakesh is a gene that is white without the aid of the wash gene. It will never be black or darker than the base. Always white.
- This marking is not affected by spread or density!
- Most of the marking is hard lined, but the inside of it is blended. The inside does not have to be blended, though. You can leave it empty.
- The example below is just a general example, you can change it up a little, as long as it generally looks the same.

VARIANT EXPRESSION:

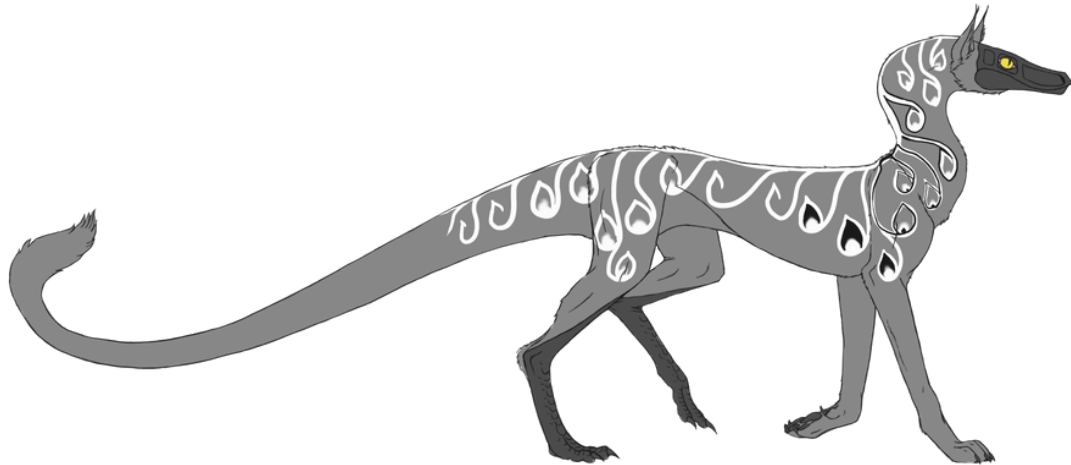

WITH WINGS:

- Marrakesh does not need to show on the wings at all. The example below shows the max amount of Marrakesh that can show on the wings.

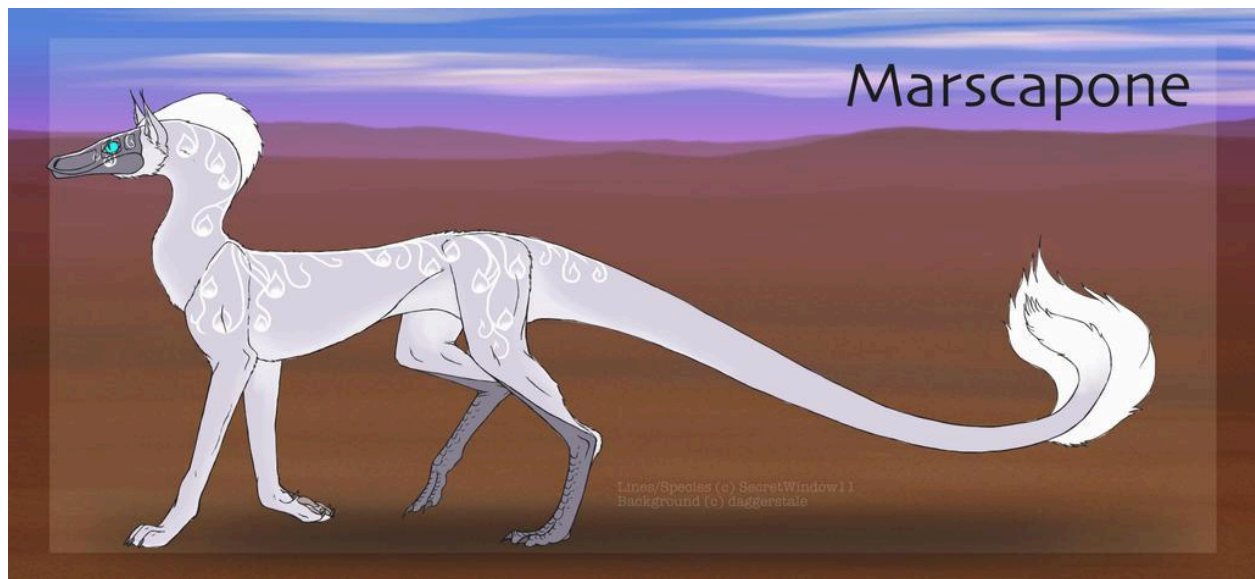

WITH SECONDARIES:

- you can outline or fill the marking
- you can also fill in the teardrops

GROUP EXAMPLES:

Creamy Purple Marrakesh
