

Installing Take & Hold Splitter

Step 1 - Install and set up r2modman

- Go to <https://thunderstore.io/package/ebkr/r2modman/> and select "Manual Download".
- Open the zip file and place the contents into a folder, then run and complete the installer.
- Run r2modman and select "Create new", enter a name like "Speedrunning" and select "Create".
- Click on the new profile and press "Select profile".
- On the left side, select the online sections and search for "Deli".

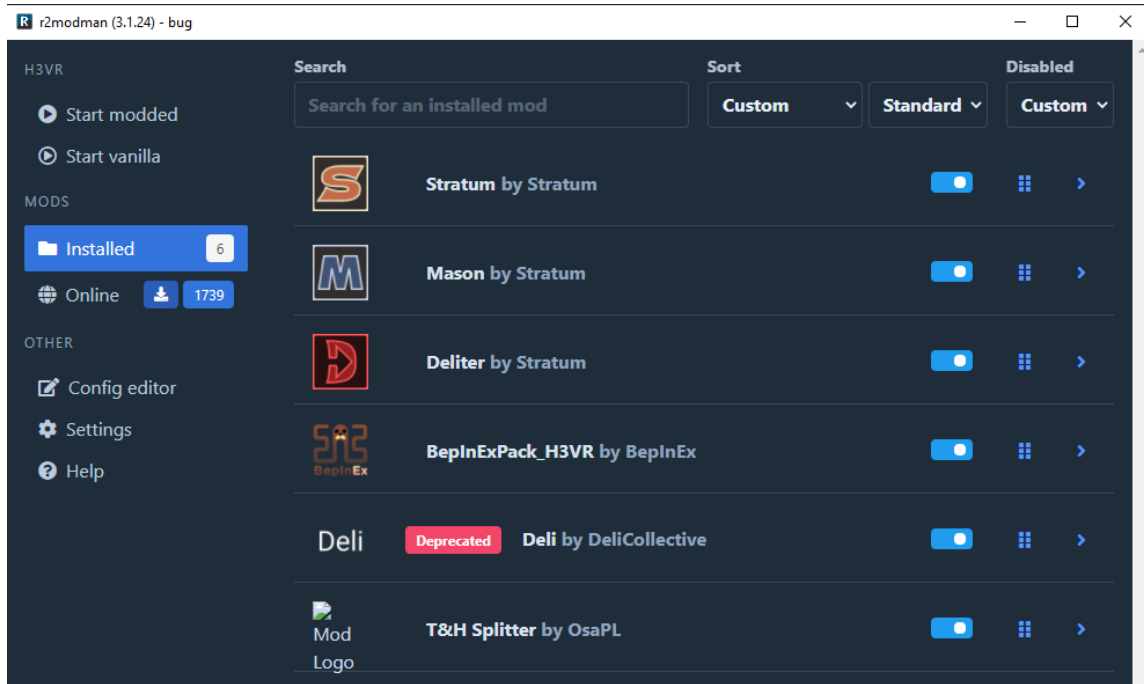

- Click it and download it, then "Download with dependencies".
- On the left side, select installed and it should look like this.

Step 2 - Install Take & Hold Splitter

- Go to <https://github.com/Osa-H3VR/TakeAndHoldSplitter/releases/tag/0.1.0-Beta> and download 0.1-TakeAndHoldSplitter.deli by clicking on it in the assets section at the bottom.
- In r2modman, select settings on the left side, search "Import local mod" and click on it.
- Click "Select file and browse for 0.1-TakeAndHoldSplitter.deli and select it.
- Name: T&H Splitter
- Author: OsaPL

- Select "Import local mod"
- Your "Installed" section should now look like this

Step 3 - Install Livesplit and Livesplit Server

- Download the latest version of livesplit here: <https://livesplit.org/downloads/>
- Extract the contents of the zip to your preferred install directory and keep it open
- Download LiveSplit.Server.zip from here: <https://github.com/LiveSplit/LiveSplit.Server/releases/tag/1.8.19>
- Place the contents of the zip file in the "Components" folder in the livesplit directory

Step 4 - Set up Livesplit/Livesplit Server

- Open "LiveSplit.exe"
- Right click on it and select "Open layout > Default"
- Right click and select "Edit splits"
- For Game name, search and select "Hot dogs, Horseshoes and Hand Grenades".
- Run Category - select the Map you will be running
- In the "Real Time" section, press insert below until there are five rows in the table.
- Name them "Hold 1" - "Hold 5" as below and then press ok.

Game Name:

Run Category:

Start Timer at: Attempts:

There is no Auto Splitter available for this game.

- Press "OK"
- Press the + button and choose "Control > LiveSplit Server"
- Press "OK"
- Your livesplit should now look something like this:

Hot dogs, Horseshoes and Hand Grenades	
Take and Hold - 5 Holds Spawnlocked - Class...	0
Hold 1 End	-
Hold 2 End	-
Hold 3 End	-
Hold 4 End	-
Hold 5 End	-
0.00	
Previous Segment	-

- You can resize it to make it look better

HdHaHG	
Take and Hold - 5 H...	0
Hold 1 End	-
Hold 2 End	-
Hold 3 End	-
Hold 4 End	-
Hold 5 End	-
0.00	
Previous Segment	-

- Right click livesplit and "Save splits as..."
- Name them what you want and "Save" (You want to save your splits after each time you play to save your improvements.)
- Right click livesplit and "Save layout as..."
- Name it H3VR and "Save" (If you want to change anything about your layout make sure to save it again after changing things [It's not required, but I recommend having a look at what can be added to the layout and other customisation settings in the layout editor.]

Step 5 - Using the Timer

1. Open r2modman and livesplit.
 2. In r2modman select your speedrunning profile and press "Start modded" on the left. (This will run H3VR with the splitter active.)
 3. Go to LiveSplit and right click and select "Control > Start Server" (Now whenever you start a T&H run the timer will start automatically, split after each hold, and end when you complete hold 5.)
- You will need to follow these steps every time you want to use LiveSplit with the Splitter.
 - If the timer stops working, restart Livesplit and H3VR.

Important Notes

- We **do not** accept the time on LiveSplit as your official time. The game time on the T&H end screen/scoreboard is the official time and may differ slightly from the LiveSplit time.
- Be sure to include the end screen time in your submission, otherwise your run will be rejected.
