ABSTRACT
The abstract should contain a maximum of 250 words, including the keywords and article classification. The abstract should clearly present the following key elements:
Purpose – This section should explain why the study was undertaken. For original or novel research, describe the problem addressed or the issue that the study seeks to resolve. If the study builds upon previous research, briefly explain the rationale and significance of conducting the study. This section should also highlight the relevance of the research topic or problem and clearly state the main argument or principal finding of the study.
Design/methods/approach – This section should explain how the study was conducted. Clearly describe the approach used to obtain the research findings. For example, indicate whether the study involved interviews, laboratory experiments, surveys, observations, or other research procedures. Where relevant, specify the tools, methods, protocols, techniques, or datasets employed in the research.
Findings – This section should explain what the study found. Present the main findings clearly and directly, indicating whether the findings address the research problem or objectives and, where applicable, whether the proposed hypothesis was supported. Specific results or relevant figures should be provided rather than relying on general statements. The findings should be presented accurately and objectively without exaggerating the significance or implications of the results.
Research implications/limitations – This section should explain the implications and limitations of the research, particularly those arising from the research design or methodology that may affect the interpretation of the findings. Discuss limitations that may influence the generalizability, practical application, or usefulness of the findings, including constraints related to the methods used to establish internal and external validity or unexpected challenges encountered during the research. Although a study may have several limitations, only those directly relevant to the research problem should be presented.
Originality/value – This section should explain the originality, significance, and value of the research findings. Highlight the contribution of the study and explain how the results add value to the existing body of knowledge, practice, or theory. The discussion should remain balanced and avoid overstating the contribution of the research. Where appropriate, this section may also indicate potential directions or opportunities for future research.

ARTICLE HISTORY
Received: 31-01-2022
Accepted: 30-12-2022

KEYWORDS
Your submission should include up to 7 appropriate and short keywords that capture the principal topics of the paper

CONTACT: contact@mail.com

Introduction

The introduction should clearly outline the **aims of the paper**, explain why the topic is important, and describe its contribution to the existing body of knowledge. It should provide sufficient background to the research project, highlight the overall structure of the paper, and explain the rationale for selecting the research topic or developing the article.

The introduction should also provide broad definitions and a comprehensive discussion of the topic. Relevant perspectives from previous studies and the existing literature should be incorporated to support, challenge, or clarify the author's position on the topic. Where necessary, controversial issues, competing perspectives, and divergent hypotheses should be clearly identified and discussed.

Finally, the introduction should briefly state the **main aim of the study** and highlight its **principal conclusions or expected contribution**. As far as possible, the introduction should be written in a clear and accessible manner so that it can be understood by researchers and scientists beyond the specific field of study.

Methods

This section should describe **how the research was conducted**. The main components of this section should include: **(1) research design; (2) population and sample or research subjects; (3) data collection techniques and instrument development; and (4) data analysis techniques**.

For research involving specific tools and materials, the specifications of the tools and materials used should be clearly described. The specifications of the tools should indicate the level of sophistication or relevant characteristics of the instruments employed, while the specifications of the materials should describe the types and characteristics of the materials used in the research.

For **qualitative research**, including classroom action research, ethnography, phenomenology, case studies, and other qualitative approaches, the methods section should provide information about the **researcher's role and presence, research subjects or participants, and informants** who contributed to the research. It should also explain the procedures used to explore and collect research data, the **research location and duration**, as well as the procedures employed to **ensure and verify the validity or trustworthiness of the research findings**.

Result

This section may be organized into several subheadings where appropriate. It should present a concise, clear, and precise description of the research or experimental results, together with their interpretation and analysis. The discussion should explain the meaning and significance of the findings, while the section should also clearly present the conclusions that can be drawn from the results.

1.1. Subsection

1.2.1. Subsubsection

1.2.2. Subsubsection

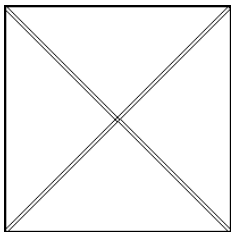

Numbered lists can be added as follows:

(1) One

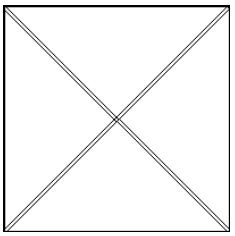

(2) Two

(3) Three

The text continues here.
All figures and tables should be cited in the main text as Figure 1, Table 1, etc.

(**a**)

(**b**)

Figure 1. This is a figure; Schemes follow the same formatting. If there are multiple panels, they should be listed as (**a**) Description of what is contained in the first panel; (**b**) Description of what is contained in the second panel. Figures should be placed in the main text near the first time they are cited. A caption on a single line should be centered.

Table 1. This is a table. Tables should be placed in the main text near the first time they are cited.

entry 2	data	data [1]

Discussion

Authors should discuss the results and how they can be interpreted from the perspective of previous studies and the working hypotheses. The findings and their implications should be discussed in the broadest context possible. Future research directions may also be highlighted.

Conclusion

Authors should critically interpret and discuss the research findings in relation to previous studies and the underlying or working hypotheses. The findings and their implications should be considered within a broad and relevant context, particularly in relation to existing knowledge and research. Where appropriate, the discussion should also identify potential directions and opportunities for future research.

Declarations

Author contribution statement

Specifies the exact contributions of each author in a narrative form.

Funding statement

The funding agency should be written out in full and include the grant number, which can be included in brackets. The funding agency needs to be listing in the "Organization Name." If there is only one funding agency: This research was supported by the Organization Name [grant number xxxxxx]. If there are multiple agencies or grant numbers, then it should be formatted as such: This research was supported by the Organization Name [grant numbers xxxxxx]; the Organization Name [grant number xxxxxx]; and the Organization Name [grant number xxxxxx]. If there is no funding information, they should state: This research received no specific grant from any funding agency in the public, commercial, or not-for-profit sectors. If an organization providing support that was not monetary (maybe they provided facilities, survey samples, etc.), please mention that that organization supported the research.

Data availability statement

Data availability statements provide a statement about where data supporting the results reported in a published article can be found - including, where applicable, hyperlinks to publicly archived datasets analyzed or generated during the study.

Declaration of interest's statement

The authors declare that they have no known competing financial interests or personal relationships that could have influenced the work reported in this paper. Alternatively, The authors declare the following financial interests/personal relationships, which may be considered as potential competing interests.

Additional information

Additional information in a narrative form.

References

References should relate only to the material you cited within your article (this is not a bibliography). References should be in APA Style 7th Edition and listed in alphabetical order. Please do not include any abbreviations. Any additional references should be included in an Additional Reading section.
