ABSTRACT

This article illustrates the preparation of your paper using MS-WORD. Papers should not be numbered. The length of the manuscript should not exceed 10 pages in this format using A4 double-sided papers. The title page should include a succinct title, the authors, and an abstract of around 200 words at the beginning of the manuscript. The affiliation, address, zip code, telephone and fax numbers, and e-mail address should be listed below the author's name. The paper begins with a title which uses 14pt Times New Roman. This is followed by the details for each author in 11pt Times New Roman. Section titles are bolded in 11pt Times New Roman. The remainder of the paper should be typed in 10pt Times New Roman. Please set your margin before you type your article by looking at the page setup of this template. If you have any questions about the format, please send a message to jti.fst@uin-suska.ac.id

Keywords: *Up to five keywords should also be included*

Introduction

The easiest way to write your paper to fit the writing format of the Journal of Science, Technology and Industry is to *copy-paste* your paper into this *template*. This *template* will be given to you by the editors of the Journal of Science, Technology and Industry if your paper is declared to be published in the Journal of Science, Technology and Industry, whether revised or not. The foreign terms should be written in *italics*. *Page setup* for the Journal of Industrial Engineering is Top, Bottom and Left = 3 cm, Right = 2.5 cm, Gutter = 0". The orientation is Portrait with Mirror margins. The paper *size* is custom, with width = 7.42 cm and space = 1.25 cm. The layout has different odds, even with header = 1.27 cm and footer = 1.27 cm. The vertical alignment is Top. (Note: The above decimal writing rules are adjusted to the writing rules on *Microsoft Word* using "." as a decimal sign instead of ",", ". The rules of decimal writing in the Journal of Science, Technology and Industry follow the rules of writing Mathematics).

Research Methods

This guide will explain about writing *headings*. If your heading exceeds one, use the second level of the heading as below.

Sub Chapter Headings

Headings on the second level are in *boldface italics* using uppercase and lowercase letters. *Headings* are written left-aligned.

Third-Level Heading

The heading at the third level follows the style of the second-level *heading*. Avoid using *headings* of more than three levels.

Results and Discussion

Follow the rules of prohibition in this journal, which is 1. Introduction, 2. Research Methods, 3. Results and Discussion, 4. Conclusion.

Mathematical Equation Writing

Mathematical equations should be numbered sequentially and begin with (1) until the end of the paper, including appendix[1]. This numbering must start and end with opening and closing parenthesis and right-aligned. Add one blank line above and below the equation. The size in the equation is Full 11pt, Subscript/superscript 8 pt, Sub-Subscript/superscript 6pt, Symbol 12 pt, Sup-symbol 10 pt. *Insert a math equation to write a math equation using math style.*

$$f(t) = \int_0^t F(u) du + \frac{dg(t)}{dt} \quad (1)$$

For example, all variable writing is written in italics with a number index in a century schoolbook. Use the " : "sign to explain the meaning of the variable and "=" if the variable is worth a number or equation. : the amount of data, A comma separates the writing of decimal numbers "," and when more than one uses a semicolon, ";", as a separator, e.g. (0.234; 123.135; 4562,234). All $X_1, ..., X_n$, $i = 1, ..., n$. $NX = 1$ parentheses are written with the letters Century Schoolbook, , [$(X_1, X_2)i$].

Theorem and Lemma

Theorem 1. *Section, theorem, lemma, collar, proposition, example, remark or note, example, figure and table should be numbered consecutively for each category. Statements on theorems, lemmas, corollaries and propositions should be written in italics [2].*

Evidence. Evidence has been provided

Figures and Tables

Each image should be captioned below the image[3]. The captions on the table are given above the table. The caption is written in lowercase except for the first character of each sentence. The entire image should be numbered sequentially. The image is placed in the centre of the page (centre alignment), while the table begins at the left *alignment* of the page.

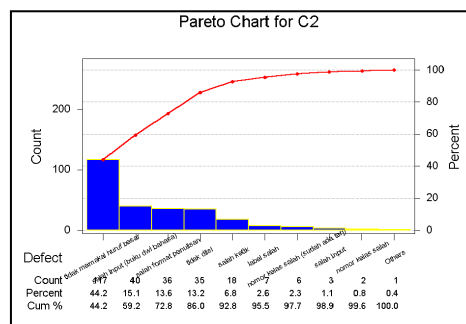

Figure 1. Uppercase only at the beginning of the name only without ending in a period

Figure 1: The caption on the image should be visible below the picture. References that use images, tables, theorems or lemmas must begin with capital letters without dividing dots. for example, Figure 1 and Table 1 are illustrations of Theorem 1. All accompanying captions are capitalized at the beginning only. Tables and images must be placed in the *body text* and meet the standards for printing. The image is framed. The captions on the table should be visible above the table.[4], [5]

Table 1. The captions on the table are also capitalized at the beginning only as well as the headings in the table (font size 9 pt)

Information	First title	First name	Second name
First name			

Middle name			
-------------	--	--	--

Conclusion

Write down the conclusions of your paper and further research suggestions in the form of narratives and not in *bullet* or *numeral form*.

Acknowledgement: The authors wish to express their appreciation to the editor and reviewers for their helpful suggestions, which greatly improved the presentation of this paper

Funding Statement: Not applicable.

Author Contributions: Study conception and design: Ren-Jieh. Kuo, Muhammad Rizki, Ferani Eva Zulvia; Data collection: Eddy Roflin; Analysis and interpretation of methods: Ren-Jieh. Kuo, Muhammad Rizki, Ferani Eva Zulvia; Draft manuscript preparation: Ren-Jieh. Kuo, Muhammad Rizki; Review and editing: Ren-Jieh. Kuo, Muhammad Rizki, Ferani Eva Zulvia. All authors reviewed the results and approved the final version of the manuscript.

Availability of Data and Materials: The datasets are publicly available on the KEEL (Knowledge Extraction based on Evolutionary Learning) and the University of California, Irvine (UCI) repositories, which are recommended for imbalanced datasets in classification studies.

Ethics Approval: Not applicable.

Conflicts of Interest: The authors declare no conflicts of interest regarding the present study.
