ROOTSTOCK DESCRIPTIONS 17 - 19

MULTIGRAFT

ROOTSTOCK & HEIGHT
(Depending on pruning) QUANTITY

Drought tolerant once established. Prune yearly in winter and summer to train to desired shape.

Apricot

3 of 4 Katy, Blenheim, Flavor Delight, Royal Rosa \$149.95
Harvest May - July
200 - 500 chill hours

Citation 5
12-18ft

Peach #2 Zaiger's Pride

Mid-Pride, August Pride, Eva's Pride, June Pride, May Pride
Harvest June - August
200 - 500 chill hours

Nemaguard 5
12 - 20ft+

Peach & Nectarine #2 Yellow Flesh, Showy Flowers

Will be grafted with 3 out of 4 of these options

Nemaguard
12 - 20ft+

5

Fantasia Nectarine, Saturn Peach, Red Baron Peach, Mid-Pride Peach and Double Delight

June - August
200 - 300 chill hours

APPLE \$99.95

ROOTSTOCK & HEIGHT
(Depending on pruning)

QUANTITY

Drought tolerant. Prefers deep, infrequent watering. Prune yearly to train to desired size and shape.

Dorsett Golden

Outstanding sweet yellow apple. One of the earliest to harvest in late June - July. Firm, very flavorful and intense, sweet with a kick. 100 chill hours. Self-fruitful. Improved fruit quality and size when pollinized by Anna.

Geneva
10 - 15ft

15

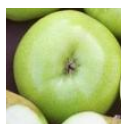

Spitzenberg

Classic heirloom apple with crisp, juicy flesh and rich, aromatic flavor. Excellent for fresh eating, baking, and cider. Good keeper. Vigorous tree. Requires pollinizer such as Gala or Yellow Newton Pippin. 600-800 chill hours. Harvest late September to October.

M-111
12 - 20ft+

5

Yellow Newton Pippin

Firm, crisp, slightly tart, superb flavor. For peak flavor and acid/sugar balance, wait to harvest until cheeks are blushed yellowish-green. Excellent keeper in storage. Famous for cooking, excellent fresh or dried. Vigorous tree. Harvest November to January. 400 - 700 chill hours. Self-fruitful. .

M-111
12 - 20ft+

5

APRICOT \$99.95

ROOTSTOCK & HEIGHT
(Depending on pruning)

QUANTITY

Drought tolerant once established. Prefers deep, infrequent watering. Summer prune yearly.

Autumn Glo

Fruit is medium-sized with good color and tremendous flavor. One of the highest rated at Dave Wilson Nursery fruit tastings. Self Fruitful. 500 chill hours. Harvest August to September

Citation
12 - 18ft

5

Blenheim

Taste Test Winner! Popular variety. All-purpose freestone. Sweet, aromatic, flavorful. Self Fruitful. 400 chill hours. Harvest late June to early July

Citation
12 - 18ft

50

Gold Kist

Excellent backyard apricot. Freestone, very good quality. Heavy bearing. Self Fruitful. 300 chill hours. Harvest May to June

Citation
12 - 18ft

5

**Pixie-Cot Miniature**

Compact tree with medium-sized, fine quality fruit. Ripens first week of June. 500 chill hours. Self fruitful.

Natural Dwarf
6 - 10ft

5

CHERRY \$99.95

ROOTSTOCK & HEIGHT
(Depending on pruning)

QUANTITY

Drought tolerant once established. Prefers deep, infrequent watering. Prune young trees yearly in winter. Summer prune mature trees.

**Bing**

Large, firm, juicy, sweet, nearly black when ripe. Superb flavor. Large vigorous tree. Pollenizer required: Black Tart, Van, Rainier, Lapins. 700 chill hours. Harvest late May to June

Maxma 14
12 - 20ft

10

**Lapins** *aka self fertile Bing*

Self-fruitful, dark red sweet cherry. Large, firm, excellent flavor. Similar to Van in color, Bing in shape. 500 chill hours or less.

Maxma 14
12 - 20ft

10

**Stella**

Large, nearly black, richly flavored sweet cherry. Self Fruitful. 400 chill hours. Harvest late May to mid June

Maxma 14
12 - 20ft

10

JUJUBE \$129.95

ROOTSTOCK & HEIGHT
(Depending on pruning)

QUANTITY

Drought resistant once established. Prefers deep, infrequent watering. Pest and disease free. Train size and shape with yearly pruning.

**GA866**

Outstanding, two-inch elongated fruit is exceptionally sweet with apple-like flavor. Ripens September - October. Partially self-fruitful, best when pollinated by another jujube. 200 hours.

Lotus
15 - 25ft

10

**Honey Jar**

Very sweet and crunchy. Small round fruit. Compact tree. Partially self-fruitful, best when pollinated by another jujube. 200 chill hours. Ripens September - October.

Lotus
8 - 12ft

10

**Li**

Classic favorite. 2" Round fruit. Crunchy and sweet. Excellent for drying, or fresh eating. 150 chill hours. Ripens September - October. Self Fruitful.

Lotus
15 - 25ft

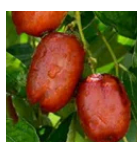

10

**Shanxi Li**

2" round fruit. Very popular, excellent flavor. Self Fruitful. Good pollenizer for other varieties. 200 chill hours. Ripens September - October

Lotus
10 - 20ft

10

**Silver Hill** *aka Tiger Tooth*

Elongated fruit tooth-like in shape. The Silverhill mature very late-season. Very sweet and best for fresh eating. Round fruit. Self Fruitful. 150 chill hours. Ripens September - October.

Lotus
10 - 20ft

10

**Sugar Cane**

Small round fruit. Very sweet and crunchy. Partially self fruitful, best harvest when pollinated by another jujube. 150 chill hours. Harvest September to October

Lotus
10 - 15ft

10

MULBERRY \$129.95

ROOTSTOCK & HEIGHT
(Depending on pruning)

QUANTITY

Drought tolerant once established. Prefers deep, infrequent watering. Prune yearly in winter and after harvest to control height.

**Teas Weeping**

Morus alba 'pendula'. Weeping habit. Sweet round black fruit. Excellent for fresh eating, baking. Low chilling requirement. Harvest June to July. Self Fruitful

8-12 ft+
(30ft wide
without pruning)

5

NECTARINE \$99.95

ROOTSTOCK & HEIGHT
(Depending on pruning)

QUANTITY

Requires rich soil and regular watering. Prune yearly in winter. Summer prune to control height.

**Arctic Babe Miniature**

White sweet flesh, semi-freestone. Self-fruitful. Harvest early June. Mature height of 5 - 6ft. 700 chill hours or less.

Nemaguard
6 ft

10

**Arctic Jay**

Taste test winner. Very attractive, firm, crunchy freestone fruit is richly flavored, with a balance of acid and sugar. Good keeper. Ripens Mid July. 500 chill hours. Self-fruitful.

Citation
8 -12ft

5

**Arctic Queen**

Delicious, super-sweet white freestone nectarine. Showy flowers. Rich, extremely sweet flavor, crunchy texture. High-scoring in taste tests. Good keeper. Self Fruitful. 600-700 chill hours. Harvest August.

Citation
8 -12ft

5

**Arctic Rose**

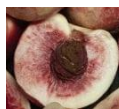

Delicious, super-sweet, white nectarine. Very high scoring in taste tests. Rich flavor and nice crunchy texture when firm ripe, extremely sweet when fully ripe. Harvest mid to late July in Central CA. Highly recommended for home orchards. 600-700 chill hours. Self-fruitful

Citation
8 -12ft

5

Lovell
12 - 20ft+

5

**Arctic Sprite Miniature**

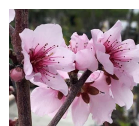

Medium size white flesh freestone. High flavor, with a pleasing sugar/acid balance. Firm and juicy. Harvest early to mid-August in Central CA. Heavy bearing, 5-6 ft. Self-fruitful.

Lovell
6 ft

5

**Arctic Star**

Super-sweet, semi-freestone white flesh. Showy flowers. Dark red skin, snow white semi-freestone flesh. Ripens June. 300 chill hours. Self Fruitful.

Citation
8 -12ft

5

**Candy Sprinkles**

Burgundy skin. Bright yellow juicy flesh with pink and red flecks. Sweet flavor with balanced tanginess and complex aftertaste. Freestone. Delicious and attractive fruit for fresh eating, pies, or preserves. Harvest June. 450 chill hours. Self Fruitful.

Nemaguard
12 - 20ft+

5

**Heavenly White**

Large, firm, white-fleshed freestone. Superb acid/sugar balance and rich, complex flavor. Highly scoring in taste tests. Red and cream colored skin. Self Fruitful. 650 chill hours. Harvest July

Citation
8 -12ft

5

**Nectar Babe Miniature**

Excellent quality yellow freestone with sweet, rich, delicious flavor. Heavy bearing. 400 hours or less. Pollenized by Honey Babe or other peach or nectarine.

Lovell
6 ft

5

**Sauzee King**

First 'donut' style nectarine. Outstanding variety. White flesh is sweet and juicy. Red skin, blushed with yellow. The tree sets fruit at a young age and produces heavily. Thinning is recommended. 500 chill hours or less. Self Fruitful. Harvest June.

Citation
8 -12ft

5

**Snow Queen**

Taste test winner. Sweet, juicy white freestone. Retains a satisfying amount of acid to balance the sweet. Long-time favorite. Self Fruitful. 200 chill hours. Harvest June to July.

Citation
8 -12ft

5

PEACH \$99.95

ROOTSTOCK & HEIGHT
(Depending on pruning) QUANTITY

Requires rich soil and regular watering. Prune yearly in winter. Summer prune to control height.

**Babcock**

Long-time favorite white-fleshed freestone. Sweet and juicy, aromatic, low in acid. High scoring in taste tests. Firm flesh. Self Fruitful. 300 chill hours. Harvest July.

Citation
8 -12ft

15

**El Dorado Miniature**

Showy Flowers. Exceptionally high quality, richly flavored fruit. Yellow freestone, attractive red blushed skin. Harvest early to mid-June. 400 hours or less. Self-fruitful.

Lovell
4 - 6ft

5

**Galaxy**

New Saucer / Donut Peach. Showy flowers. Cream skin, blushed red with white flesh and a sweet, low acid flavor. Larger, firmer and more attractive than Stark Saturn, which ripens at the same time. Harvest June. Estimated chilling requirement 500 to 600 hours.

Citation
8 -12ft

5

**Honey Babe Miniature**

Excellent yellow freestone with sweet, rich, delicious flavor. Showy Flowers. Heavy bearing 5-6 ft. tree is easily covered to protect blooms from frost. Self

Lovell
5 - 6ft

10

Fruitful. 400 chill hours. Harvest July

Indian Free

Exceptional heirloom prized for its unique, red-streaked white flesh and complex, tangy-sweet flavor. Showy Flowers. Excellent for fresh eating and canning. Partially self fruitful, Plant two and it can pollenate itself, or plant another variety such as O'Henry. Vigorous, heavy-bearing tree. 500–800 chill hours. Harvest late September.

Citation
8 -12ft

5

July Elberta

Reliable heavy crops. Showy Flowers. Juicy, sweet, very flavorful yellow freestone fruit for canning, freezing, pies, or fresh use. Self Fruitful. 400-500 chill hours. Harvest July.

Citation
8 -12ft

10

May Pride

Delicious, sweet and tangy, semi-freestone. Showy Flowers. Large fruit. Ripens May. 150-200 chill hours. Self-fruitful.

Citation
8 -12ft

5

O'Henry

Large, firm, full red skin, superb flavor. Showy Flowers. Freestone. Vigorous, productive tree. Self Fruitful. 750 chill hours. Harvest August.

Citation
8 -12ft

5

Peregrine

Showy Flowers. Popular heirloom variety. White melting flesh with fine flavor under a crimson skin. Hardy, self-fruitful, **peach leaf curl resistant**. Harvest August. 600 to 700 chill hours.

Lovell
12 - 20ft+

5

Pumpkin Spice

Late harvest. Orange skin gives way to yellow flesh marbled with red. Surprisingly spicy flavor for all its juicy sweetness. 500-600 chill hours. Ripens early October. Self Fruitful.

Nemaguard
12 - 20ft+

5

Red Baron

Showy red buds open to double magenta flowers. Large, juicy, firm, richly flavored yellow freestone. 250 chill hours. Self-fruitful. Harvest July - August

Nemaguard
12 - 20ft+

5

Sauzee Swirl

New Saucer/Donut Peach. Showy Flowers. Beautiful white flesh with red marbling. Medium clingstone. Self Fruitful. 400 chill hours. Harvest May

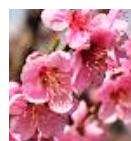

Citation
8 -12ft

10

Stark Saturn

Saucer/Donut Peach. White flesh, sweet mild flavor. Showy flowers. Self Fruitful. 200-300 chill hours. Harvest July.

Citation
8 -12ft

15

Sugar Tiger

Saucer/Donut Peach. Unique yellow fruit with striking orange tiger stripes throughout. Sweet, juicy, low acid. Perfect for fresh

Nemaguard
12 - 20ft+

5

eating. Harvest July - August. Self-fertile. 400–600 chill hours.

PERSIMMON \$129.95**ROOTSTOCK & HEIGHT**
(Depending on pruning)**QUANTITY**

Drought tolerant once established. Hardy, attractive tree, practically free of pests and disease.

**Chocolate**

Small to medium size, oblong, bright red skin. Non-astringent, can be eaten while crunchy. Sweet, spicy, firm, orange brown flesh, superb flavor - the choice of connoisseurs. 200 hours. Self-fruitful.

D. Lotus
10 - 30ft

5

**Coffee Cake**

Unique spicy-sweet flavor that evokes images of cinnamon pastry and hot coffee. Very sweet. Round sides. Non-astringent, can be eaten while crunchy. 200 chill hours. Pollenizer required, such as Chocolate persimmon. Ripens Sept - October

D. Lotus
10 - 30ft

5

**Fuyu 'Imoto'**

Large size fruit. More square and flattened than Jiro. Sweet when ripe. Non-astringent, can be eaten while crunchy. Harvest October to December. Self-fruitful. 200 hours.

D. Lotus
10 - 30ft

5

**Fuyu 'Jiro'**

Medium to large size, flat shape. Sweet when ripe. Non-astringent, can be eaten while crunchy. Self Fruitful. 200 chill hours. Harvest October to late November.

D. Lotus
10 - 30ft+

60

**Giant Fuyu**

Large sweet fruit, rounder shape than Jiro. Non-astringent, can be eaten while crunchy. Harvest October - December. 200 chill hours. Self-fruitful.

D. Lotus
10 - 30ft+

10

**Hachiya**

Large, deep orange-red, elongated acorn-shape. Hot summers required to mature fruit. Sweet, flavorful, astringent until soft ripe. Self Fruitful. 200 chill hours. Harvest November to December.

D. Lotus
10 - 30ft+

5

**Izu**

Naturally slow growing, compact tree. Sweet when ripe. Non-astringent fruit. Medium to large size, rounder sides than Jiro. Self Fruitful. 100 chill hours. Harvest late September to October.

D. Lotus
8 - 15ft

15

PLUERRY \$99.95**ROOTSTOCK & HEIGHT**
(Depending on pruning)**QUANTITY**

Drought tolerant once established. Prefers deep, infrequent watering.

**Flavor Punch**

Extremely high flavor fruit with orange skin blushed red, and red/orange flesh. Late ripening with a long hang-time extends your fruit harvest into fall. Pollenized by Flavor King Pluot, Emerald Beaut plum, and most varieties of mid to late blooming Pluot, Pluerry and plum. Harvest mid August through September. 500 hours or fewer.

Citation
12 - 18ft

5

**Sweet Treat**

Unique hybrid of plum and cherry with exceptionally sweet, juicy fruit. Freestone, excellent for fresh eating. Heavy bearing trees. Pollenized by Santa Rosa Plum. 400–500 chill hours. Harvest mid-July.

Citation
12 - 18ft

5

PLUM \$99.95

ROOTSTOCK & HEIGHT
(Depending on pruning) QUANTITY

Drought tolerant once established. Prefers deep, infrequent watering. Benefits from branch training with limb spreaders in early years.

**Beauty**

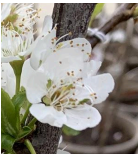

Sweet, flavorful plum. Red over yellow skin, soft amber flesh streaked red. 250 hours. Self-fruitful. Harvest June

Citation
12 - 18ft

5

**Burgundy**

Maroon skin and semi-freestone flesh. Sweet, pleasing, mild flavor. High taste test scores. Self Fruitful. 300 chill hours. Harvest July to August

Citation
12 - 18ft

40

**Elephant Heart**

Home orchard favorite: large, heart-shaped fruit with sweet, juicy, richly flavored, firm red flesh. Dark reddish-purple mottled skin. Harvest September. Hardy, heavy bearing tree. 500 hours or less. Pollenize with Beauty or Santa Rosa.

Citation
12 - 18ft

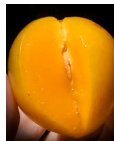

5

**Emerald Beaut**

Light green skin, greenish-yellow to orange freestone flesh. Very sweet, crunchy, intense flavor. Harvest September thru October. 600-700 chill hours. Pollenizer required: Beauty, Burgundy, Late Santa Rosa, Nubiana, or Flavor King Pluot.

Citation
12 - 18ft

5

**Inca**

Medium size, heart-shaped fruit. Rich, crisp flesh, golden flesh, skin blushes red when fully ripe. Pleasant acid/sugar balance. Heavy crops. Ripens early to mid August. 300 chill hours. Self-fruitful.

Myro 29C
12 - 20ft+

5

**Mariposa**

Large, red fleshed, sweet, juicy, firm, delicious. Small pit, nearly freestone. Mottled maroon over green skin. Use fresh or cooked. Harvest August. 250 hours. Harvest Late July to Early August. Pollenizer required such as Catalina, Nubiana, or Santa Rosa.

Citation
12 - 18ft

5

Persian Green

Also called *Gojeh Sabz*, this small plum is traditionally eaten with a pinch of salt when it is crunchy, green, and sour. When ripe, the yellow-green fruit softens and becomes sweet with a light tart finish. Early ripening. Self Fruitful. 400-600 hours.

Myro 29C
12 - 20ft+

5

Santa Rosa

Tart skin and sweet flesh is juicy, tangy and flavorful. Reddish purple skin, amber flesh tinged red. Self Fruitful. Excellent pollener for many other plums and pluots. 300 chill hours. Harvest June to July

Citation
12 - 18ft

10

Satsuma

Maroon over green skin, sweet red flesh. Pollenized by Santa Rosa or Beauty. 300 chill hours. Harvest August

Citation
12 - 18ft

5

UME PLUM \$99.95

a.k.a Flowering Apricot

ROOTSTOCK & HEIGHT
(Depending on pruning)

QUANTITY

Drought tolerant once established. Prefers deep, infrequent watering. Not for fresh eating. Used for umeboshi, plum wine, or medicinal purposes.

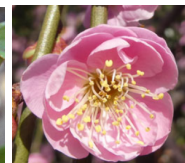

Bongo

Showy light pink flowers, large fruit. Partially self fertile. Pollenized by Shiro Kaga, Mokel, or Peggy Clark. 250 chill hours.

Myro 29C
12 - 20ft

10

Mokel

Showy, fragrant pink blossoms. Partially self-fertile. Pollenized by Shiro Kaga, Bongo, or Peggy Clark. 250 chill hours.

Myro 29C
12 - 20ft

5

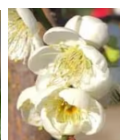

Peggy Clarke

Showy pink blossoms. Partially self-fertile. Pollenized by Shiro Kaga, Bongo, or Mokel. 250 chill hours.

Myro 29C
12 - 20ft

5

Shiro Kaga

Showy white flowers. This variety is highly sought after. Partially self fruitful. Pollenized by Bongo, Mokel, or Peggy Clark. 250 chill hours.

Myro 29C
12 - 20ft

20

PLUOT \$99.95

ROOTSTOCK & HEIGHT
(Depending on pruning)

QUANTITY

Drought tolerant once established. Prefers deep, infrequent watering. Benefits from branch training with limb spreaders in early years.

Dapple Dandy

White and red fleshed freestone with wonderful flavor. Skin dappled yellow and maroon. Taste test winner. Heavy producer. Pollenizer required: Flavor Supreme pluot, Flavor King pluot, Santa Rosa plum, or Burgundy plum. 400-500 chill hours.

Citation
12 - 18ft

5

Harvest August

Emerald Drop

Medium to large fruit with green skin and yellow-orange flesh. Prolonged harvest: early picked fruit is firm, yet juicy and sweet. Left to hang, fruit turns greenish-yellow with honey-like orange flesh. Upright tree sets heavy crops once established. Harvest mid-July to late August. 400 chill hours. Pollenize required such as Flavor Grenade Pluot or Santa Rosa plum.

Myro 29C
12 - 20ft

5

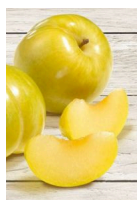

Flavor King

Taste test winner. Unique plum-apricot hybrid with sweet, rich, spicy flavor. Reddish-purple skin, crimson flesh. Pollenized by Flavor Supreme Pluot, Dapple Dandy Pluot, Santa Rosa Plum, or Late Santa Rosa Plum. 400 chill hours. Harvest Aug - to Sept

Citation
12 -18ft

5

Flavor Queen

Exquisite plum/apricot hybrid with candy-like sweet, wonderfully pleasing flavor. Greenish-yellow skin, amber-orange flesh. Prolonged harvest: mid-July thru August. 400-500 hours. Pollenized by Dapple Dandy Pluot, Flavor Supreme Pluot, or Burgundy Plum. Not pollinated by Flavor King Pluot.

Citation
12 -18ft

5

PRUNE \$99.95

ROOTSTOCK & HEIGHT
(Depending on pruning)

QUANTITY

Drought tolerant once established. Prefers deep, infrequent watering. Benefits from branch training with limb spreaders in early years.

Italian

Large, purple skin, freestone. Rich flavor, very sweet when fully ripe. Vigorous, cold hardy tree. Late bloom. Late summer harvest. 800 hours. Self-fruitful.

Citation
10 -18ft10

5

WALNUT \$99.95

ROOTSTOCK & HEIGHT
(Depending on pruning)

QUANTITY

Drought tolerant once established. Prefers deep, infrequent watering.

Chandler

Heavy bearing. High quality light-colored nuts. Good choice for backyard walnut. Late September to October harvest. 700 hours. Self-fruitful.

15 - 30ft +

5

ROOTSTOCKS ON OUR TREES

All of the fruit trees on this list are grafted. This means that two trees of different genetic characteristics have been grafted together (sometimes up to 6 on one tree!)

The root system is known as the rootstock. It is the lower part of the tree below the graft union, which starts anywhere from a few inches to multiple feet above ground level and continues down into the root system in the soil. The rootstock is capable of fruiting, but usually does not

create great fruit. It passes on important characteristics to the fruiting part of the tree such as pest resistance, disease resistance, vigor, early fruiting, or possibly a dwarfing effect. The rootstock is genetically different than the variety grafted onto it.

The variety is the part of the plant growing above the graft union. It will have a specific flavor, size, color, harvest window, and pollinizer requirements. So when you see a tree labeled “Fuji Apple on Geneva Rootstock” and another labeled “Fuji Apple on M-111 Rootstock” these two trees will both grow Fuji apples, but the tree on M111 rootstock will grow quite fast and very tall, 25 feet at maturity. The tree on Geneva rootstock will grow slower and reach a maximum of 15 feet at maturity. Consider the rootstock when choosing your trees.

Apple Rootstocks

Geneva 969 – Dwarfs 50% of standard size to approximately 10-15’ tall (unpruned). High resistance to wooly apple aphid, fire blight. Resistant to crown and root rot. Precocious (bears young) and productive. Requires staking for the first few years. Can be grown in a container.

M111 - Best all-around rootstock for apples, dwarfs to 85% of standard size (15 - 25’ tall unpruned). Can be maintained to around 10 - 15ft with yearly pruning. Tolerates wet, dry and poor soils. Induces early and heavy bearing. Resists wooly apple aphids and collar rot

M7 - Dwarfs to 55% - 70% of standard size of approximately 12 - 20’ tall (unpruned). Can be maintained to around 10 - 18ft with yearly pruning. Moderately drought tolerant, cold hardy, tolerant of sand or gravel loams. Induces early bearing. Requires staking for the first few years. Resistant to fireblight and moderately resistant to powdery mildew. Susceptible to crown gall and wooly apple aphid. Suckers and gets burr knots. May need potassium supplements.

Apricot Rootstock

Citation - Dwarfs apricots by 50%-66% of their standard size (15 - 20 feet unpruned). Can be maintained to around 10 - 12ft with yearly summer pruning. Tolerates wet soil and is cold hardy (induces early dormancy in scion). Nematode resistant. Induces early and heavy bearing, with little or no suckering. Can be grown in a large container.

Cherry Rootstocks

Maxma14 - Dwarfing rootstock for sweet cherries, trees dwarfed to 14 - 20ft tall unpruned. Can be maintained to around 10 - 12ft with yearly summer pruning. Induces early heavy bearing. Good tolerance to wet soils, also performs well in chalky soils. Resistant to bacterial canker and nematodes. Well anchored, little suckering. Vigorous roots. Choose a planting location that is 15 feet away from any underground utilities, hardscapes, or foundations.

Mazzard - Vigorous, more tolerant of wet soils than Mahaleb, prefers good drainage. Resistant to root knot nematodes and oak root fungus. Well anchored and cold hardy. Unpruned standard varieties reach approximately 30 - 40 ‘tall. Yearly winter and summer pruning and an initial low heading cut can maintain a canopy 10 - 18’. Vigorous roots. Choose a planting location that is 15 feet away from any underground utilities, hardscapes, or foundations.

Mahaleb - The most winter hardy of the commonly used cherry rootstocks. Sweet cherries slightly dwarfed, no dwarfing effect on sour types. Induces early, heavy bearing. Resists crown gall, bacterial canker, some nematodes. Not tolerant of wet soils. Unpruned standard varieties reach approximately 30 - 40 'tall. Yearly winter and summer pruning and an initial low heading cut can maintain a canopy 12 - 18'. Vigorous roots. Choose a planting location that is 15 feet away from any underground utilities, hardscapes, or foundations.

Jujube Rootstock

Diospyros Lotus - Drought tolerant, disease resistant. Unpruned standard varieties reach approximately 20 - 30 'tall. Yearly pruning and an initial low heading cut can maintain a canopy 10 - 15'. Vigorous roots. Choose a planting location that is 15 feet away from any underground utilities, hardscapes, or foundations.

Mulberry Rootstock

Black Russian Mulberry - Fast growing rootstock used for all mulberries as well as sold as a tree. Bears reddish-black fruit. Resistant to Texas root-rot. Circa 1500. Unpruned standard varieties reach approximately 20 - 30 'tall. Yearly summer pruning and an initial low heading cut can maintain a canopy 10 - 15'. Vigorous roots. Choose a planting location that is 15 feet away from any underground utilities, hardscapes, or foundations.

Persimmon Rootstock

Diosporus Lotus - Bears small edible fruit. Needs well drained soil and deep soil. Unpruned standard varieties reach approximately 20 - 30 'tall. Yearly pruning and an initial low heading cut can maintain a canopy 10 - 15'.

Pear Rootstock

OHxF333 (Old Home x Farmingdale 333 - Dwarfs to 66% of standard size. Nearly free of root sprouts. Resistant to pear decline. Tolerates wet soils. Unpruned tree size can reach approximately 12-18' tall. Yearly pruning with an initial low heading cut can maintain a canopy 8 - 12'. Can be grown in a large container.

Peach & Nectarine Rootstocks

Citation - Peaches and nectarines dwarfed to 8 to 14 feet. Very tolerant of wet soil, induces early dormancy in dry soil. Very winter hardy. Resists root-knot nematodes. Trees bear at a young age. Can be grown in a large container for several years. Regular fertility and amendments with worm castings recommended to balance out low vigor.

Nemaguard - Excellent rootstock for well-drained soil. In slower-draining soils plant on mound or berm. Vigorous and resistant to root-knot nematodes. Unpruned tree height for standard varieties can reach approximately 15 - 25' tall. Yearly pruning and initial low branching can maintain a canopy 10 - 15'

Lovell - Vigorous, more tolerant of wet soil than Nemaguard. Upright tree height for standard varieties can reach approximately 15-25' tall. Yearly pruning and initial low branching can maintain a canopy 10 - 15'

Plum, Ume Plum, Pluot, Prune Rootstocks

Citation - Dwarfs by 50%-66% of standard size (approximately 12-18 feet) on plum, pluot, prune. Yearly pruning and an initial low heading cut can maintain a canopy 8 - 12'. Tolerates wet soil and is cold hardy (induces early dormancy in scion). Nematode resistant. Induces early and heavy bearing, with little or no suckering. Can be grown in a large container for several years.

Myrobalan 29C (Myro29C)

Unpruned standard varieties are dwarfed by 2/3 the original height and can reach approximately 15-25' tall. Yearly pruning and an initial low heading cut can maintain a canopy 12 - 16'. Shallow but vigorous root systems that tolerate wet soil. Deeper root system than Marianna. Immune to root-knot nematodes and has some resistance to oak-root fungus.

Walnut Rootstock

Paradox - Very vigorous rootstock widely used for walnuts. Provide uniform growth, improved resistance to Phytophthora and nematodes, and more consistent yields. Well-suited to a range of soils and growing conditions. Unpruned trees can grow up to 40ft. Yearly pruning and an initial low heading cut can maintain a canopy 12 - 15ft. Choose a planting location that is 15 feet away from any underground utilities, hardscapes, or foundations.
