

Logging into Chrome at Home:

1. You will need to either use a Chromebook or download the [Google Chrome Web-browser](#)
2. Select the Chrome Browser on your computer
3. Sign into Chrome using your student email and password. (ex. 123456@studentswcsoh.org)

4. Click the Blue Next button and the Blue “Yes I’m In” button to link your bookmarks and other school information.
5. Chrome will start and you will see a small icon in the top right corner with your first initial

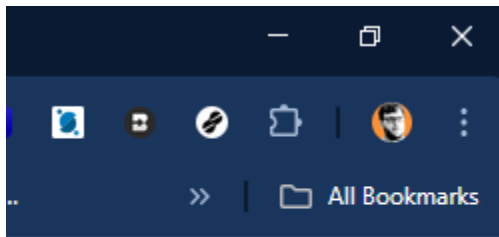

6. You have successfully logged into the chrome browser. Bookmarks, Clever, and other ways of logging into School programs will now work just as they do at school.
7. You will automatically also be logged into Google Apps (docs, slides, email) from this process. We recommend that you keep your accounts separate by using the add profile tool accessed by clicking on the icon with your first initial to add a personal account rather than signing into multiple accounts within the same Chrome profile.

 Add Chrome profile

When you are logged into both the Chrome Browser and Google Apps you will see your profile icon (initial) twice on any Google website screen. The top shows

your Chrome account being signed in and the bottom shows which Google apps account you are using.
