

Skull

By PJ Lanham

My project started out by the teacher telling us to make a Halloween scene or picture. After assigned us the project I proceeded on to Microsoft Paint to make the scene. I started out by creating the skull then moving on to making the shelf. After that I decided to expand the picture and create a cauldron with a green goup and a wooden stirring stick inside the cauldron. Then I moved on to creating the floor, wall, and window. I then moved on to giving them each details like tiles, stones, shading, and lighting. As an extra I also added a spider and it's web on the ceiling connecting to the stirring stick.

Lastly, I saved and presented the finished project to my teacher.
