

Condition

Setting up the game:

Spread the *Condition* cards out, facedown.

Shuffle the number cards and put them in a stack, facedown.

Directions (players take turns):

1. Pull a number card from the top of the deck.
2. Multiply the number by 7.
3. Flip over a *Condition* card. If the product matches the condition, keep the *Condition* card. Return the number card to the deck.
4. If the product doesn't match the condition, flip the *Condition* card back over and return the number card to the deck.
5. The player with the most *Condition* cards at the end wins.

Example:

- John pulls a 5 number card from the deck.
- He then flips over the *Condition* card that reads, "The product is greater than 25."
- John keeps the *Condition* card because $5 \times 7 = 35$ and $35 > 25$.
- John returns the 5 number card to the deck.

Optional:

The *W* card is a wild card for the player to use for any multiplication fact.
