

Enforcement Committee Report for June 2023

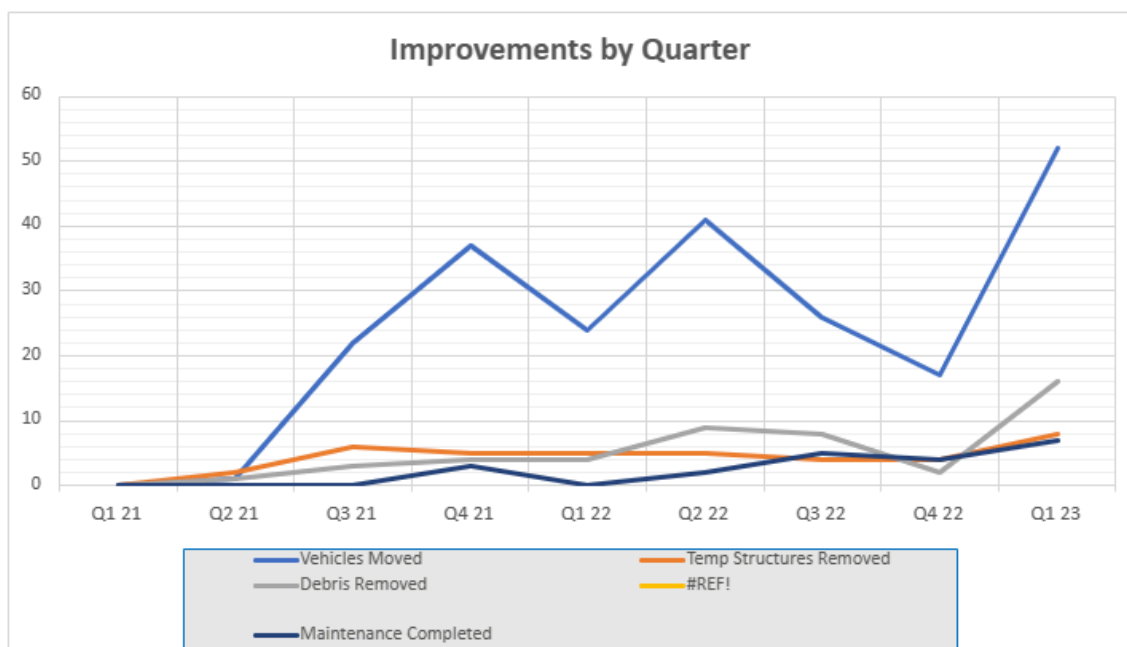

- Our Screening rate (homes/month) is on track to beat the goal for 2023.
- Over 2000 homes have been screened in 2023.
- Our screening rate is four times higher than previous years.

- Most units have the same percentage of violations as the first screening produced.

- Vehicles (boats, trailers, and RVs) are still the largest violation (many repeats)

Progress

- The rate of screening has vastly increased. (4 times last year)
- Our part time data entry position has been hired and is being trained.

Issues

- The database (Excel) is cumbersome and requires technical skills to control data input. I believe it won't support the growth needed. (Looking for solutions)
- Some members push back on violations stating that they existed when they purchased their homes. (we are considering what our position should be on these cases)
