

Each student will make a large drawing from a small item no bigger than 5 inches by 5 inches. Bring your item to class so that we can discuss it and make sure that it will be a visually interesting object.

Each drawing should be 36" x 24". Measure a 24" piece from your roll of drawing paper (part of the kit you purchased for this class). The roll is already 36" tall.

- 20% of your drawing should reach full refinement, including shading
- 15% should be the beginning basic search including your searching lines, guiding lines
- The rest of the drawing should be a finished contour drawing that is in full proportion and measurement with line weight and quality highly considered

These percentages may be throughout the drawing, you need to decide what needs to be done to draw in and lead the viewer through the entire picture to create an interesting well balanced composition.

This should be a measured well composed drawings using all the tools discussed in class.

These drawings will be due: September 26
