

## GeoGebra Inscribed Hexagon Construction

<p>1. Select <b>Circle with Center</b> from the Basic Tools menu and create a circle with a center A.</p>	<p>Basic Tools</p> 
<p>2. Select <b>Compass</b> from the Circles menu.</p> <p>3. Select point <b>A</b>, then point <b>B</b> to set the radius, then point <b>B</b> again to set the center.</p>	<p>Circles</p> 
<p>4. Select <b>Compass</b> from the Circles menu.</p> <p>5. Select point <b>B</b>, then intersection of the circles to set the radius, then intersection again to set the center.</p>	

6. Continue this pattern, selecting the previously created intersection point and the new intersection point until you get back to point B.

7. Select **Segment** from the Basic Tools menu and connect all six intersection points on the circle.
