

Functional Requirement Document

WhyNot website Application

Project Acronym : WhyNot

Current Version : Base Product

Project Title : WhyNot Website Application

OVERVIEW

Whynot is a community marketplace that provides members with a safe place to meet online to share their collectible items for buy, sell and trade. It's a platform for collectors interested in buying and selling authentic collectible items of all kinds.

How IT WORKS??

To Buy and sell the product , you'll need to make an account and visit the whynot clone through the website , where you can find the number of users. Once you've followed the user , you'll be able to view their products and live videos.

To sell the product, the user should update his account to the seller account by providing the required information and some billing details, then the seller will be able to add and sell the product.

AIM

We **aim** to enable anyone to turn their passion into a business & bring people together through commerce.

PRE - CONDITIONS.

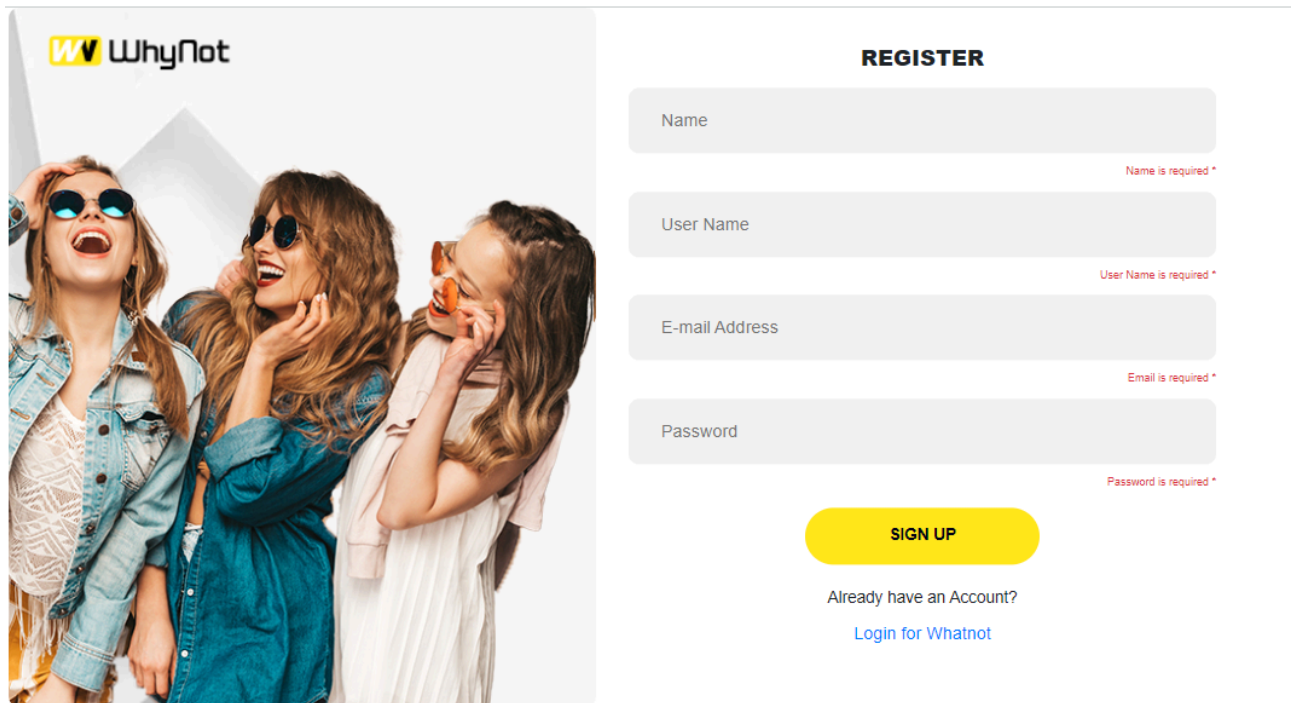

1. Users should successfully register to the application with necessary information.

FUNCTIONAL FEATURES

User

1. Sign Up

- Users can Sign Up for the application by entering all required valid user information and clicking on the Sign Up button.
- Users will have the Login option on the Sign Up page.

The screenshot displays the 'WhyNot' registration interface. On the left, there is a promotional image of three young women laughing joyfully, with the 'WhyNot' logo positioned above them. The right side of the page features a 'REGISTER' form with four input fields: 'Name', 'User Name', 'E-mail Address', and 'Password'. Each field is accompanied by a red asterisk indicating a required field. Below the 'Password' field, a red message states 'Password is required *'. A prominent yellow 'SIGN UP' button is located at the bottom of the form. Below the button, the text 'Already have an Account?' is followed by a blue link that reads 'Login for Whatnot'.

2. Login

- After registration, users can login to the application using valid login credentials.
- The Sign Up option should be provided on the Login page.

33. Live History

- All Live show history is displayed here.
- And the seller is able to view all scheduled live shows.

34. Logout

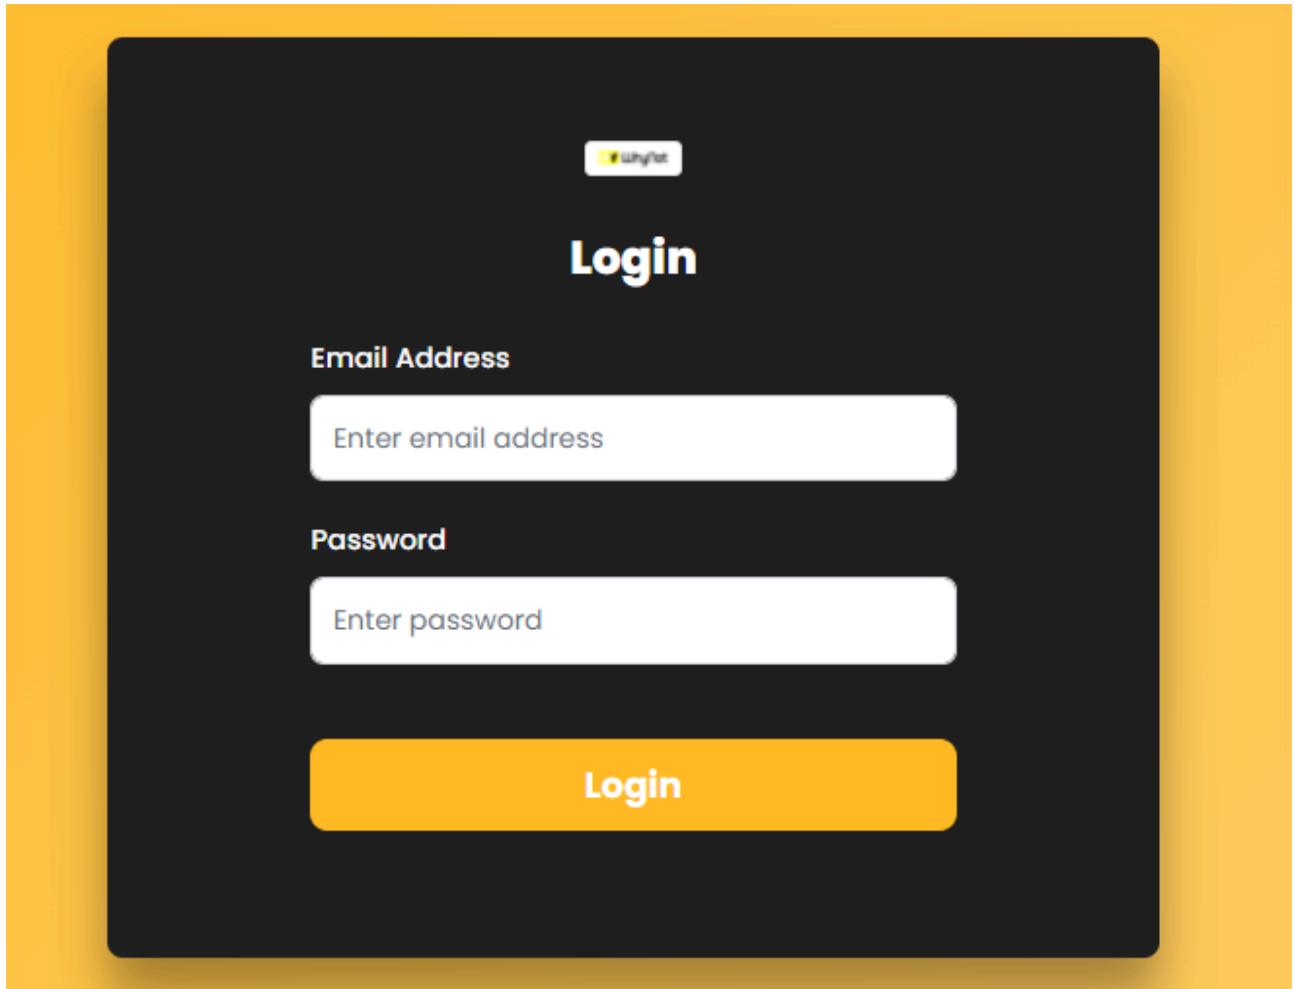

- Users will be able to logout from the application by using this option.

Admin Features

1. Login

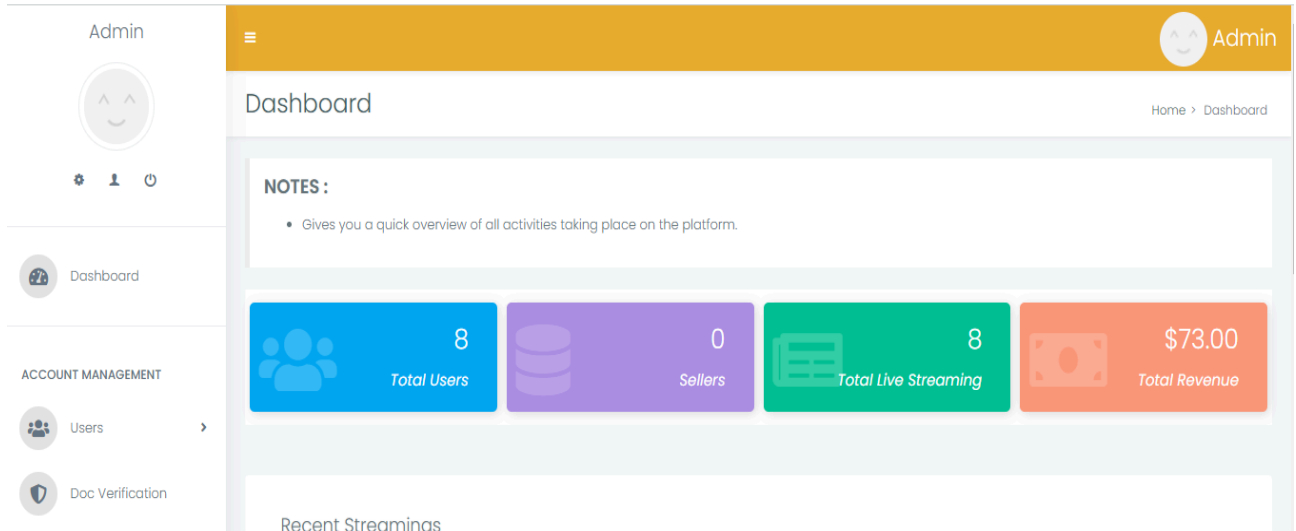

- After registration, admin can login to the application using valid login credentials.
- The admin should enter valid login credentials.

A screenshot of a login form for an application. The form is centered on a dark gray background, which is itself centered on a yellow background. At the top of the dark gray area is a small logo with the text "why1st". Below the logo, the word "Login" is displayed in a large, bold, white font. Underneath "Login", there are two input fields. The first is labeled "Email Address" in white text, and the second is labeled "Password" in white text. Both input fields have a white border and contain the placeholder text "Enter email address" and "Enter password" respectively. Below the input fields is a large, orange, rounded rectangular button with the word "Login" in white text.

2. DashBoard

- The dashboard is the front page of the Administration UI. It provides convenient shortcuts for common management tasks, some server information, and Review Board project news updates.
- And gives you a quick overview of all activities taking place on the platform.

- Here, The admin can view all the basic details such as users, Sellers, Live shows and total revenue..

3. Users

- The User Page is where you can review and manage the details about the users on the admin account.

3.1. Add User

- The action module, "Add user", lets the admin add a new user to a list (or lists) with certain information such as username , email id, password, mobile number, user category , user profile picture and user social details which is optional.
